EXECUTIVE SUMMARY

This Initial Site Assessment (ISA) was prepared for the Coachella Valley Link (CV Link) project that traverses approximately 64.34 miles throughout the Coachella Valley, between Palm Springs and Coachella, California. The CV Link is a multi-modal transportation facility that will initially connect eight of the nine cities, unincorporated county lands and three Indian reservations in the Coachella Valley. It will generally follow the alignments of the Whitewater River Channel, Coachella Valley Stormwater Channel, and Tahquitz Creek. Bicycles, pedestrians, and low-speed electric vehicles (up to 25 miles per hour) will use the corridor to access various portions of the Coachella Valley.

SITE DESCRIPTION

The characteristics of the CV Link route vary between Palm Springs and Coachella. They are described in detail in Section 3.1 of this report. The route begins in northwestern Palm Springs along approximately ¾ mile of Highway 111. It then traverses about 10 miles along an unpaved flood control service road on the right bank of the Whitewater River Channel. In central Palm Springs, the route is primarily along 6 miles of paved trails along Tahquitz Creek (the Tahquitz Creek Trail). The route continues to follow established and unestablished trails through residential areas and along the banks of the Whitewater River Channel and Cathedral Canyon Wash through Cathedral City and Rancho Mirage.

In Rancho Mirage, the route periodically leaves the Whitewater River area and passes along Highway 111, Bob Hope Drive, and other roadways.

In Palm Desert, the route remains on roadways, including Parkview Drive and Magnesia Falls Drive. It also passes through the College of the Desert campus in Palm Desert.

After Magnesia Street in Palm Desert, the route again continues along the Whitewater River Channel, primarily along established service roads. Portions of this route traverse through, or adjacent to, well-established golf courses. Between Cook Street and Fred Waring Drive, alternative routes are provided within the channel, as well as on each bank of the channel. In Indian Wells, the route crosses Fred Waring Drive and the Whitewater River Channel and divides to provide a route along the north (left) bank of the Whitewater River Channel as far as Washington Street. An alternative alignment traverses along El Dorado Drive south to Highway 111 and then eastward along Highway 111. It continues along the top of each bank of the Whitewater River Channel from Miles Avenue through Indian Wells to Washington Street. It also passes along the southern side of Miles Avenue between Highway 111 and Washington Street. This portion of the route follows sidewalks, unpaved service roads, or undeveloped areas.

After Washington Street, the route primarily stays on unpaved channel service roads along the right bank of the Whitewater River Channel, which from this point eastward is referred to as the Coachella Valley Stormwater Channel. It traverses on channel service roads through Indio, Coachella, and Thermal, where it ends at Airport Boulevard (Avenue 56).

The properties adjoining the CV Link vary considerably. They primarily include undeveloped lands, parks, golf courses, residential developments, commercial shopping centers, schools, hotels, and roadways. Other property uses included agricultural fields, equipment storage yards, water tanks, and wastewater treatment facilities. Industrial properties were not located adjacent to the current route.

SITE BACKGROUND

Up to at least 1955, most of the properties that were included within and adjacent to the CV Link route and alternatives (collectively referred to as the "route") between Palm Springs and Coachella were either

undeveloped or in agricultural use. The route still passes through or adjacent to undeveloped lands. The agricultural properties (primarily orchards) were generally located between Monterey Avenue and Airport Boulevard (from Palm Desert to Coachella). Orchards within the College of the Desert Campus in Palm Desert were removed between 1958 and 1962. The agricultural lands located adjacent to the Whitewater River between Monterey Avenue and Fred Waring Drive were removed from the CV link route area when the river was channelized in the mid-1960s. Between Jefferson Street and Van Buren Street, the adjoining agricultural properties were primarily replaced with residential developments between the 1940s and 1970s. Between Van Buren Street and Avenue 52, fields and row crops have been grown locally immediately west of the site between the 1970s and present.

Levees were constructed along the Whitewater River and along the CV Link route between 1955 and 1975. The upper portions of these levees are generally level and contain unpaved service roadways. Paved trails were established along the upper portions of these levees in Cathedral City between 1996 and 2002.

The most common type of development encountered adjacent to the CV Link route are residential developments. These developments have been growing in number since the 1960s. The CV Link path passes adjacent to (and between) a number of these developments along its entire route. The CV Link route also passes through and adjacent to several parks and commercial shopping centers. Parks, such as Desert Highland Park and Demuth Park in Palm Springs, were developed in the 1950s and 1960s. Many of the larger shopping centers that adjoin the site in Cathedral City, Rancho Mirage, and La Quinta were developed in the 1990s.

Other adjoining developments in the 1970s, 1980s, and 1990s include golf courses, resorts, and schools (including Palm Desert High School and La Quinta High School). A relatively small number of manufacturing facilities and equipment yards were developed adjacent to the site during this period. These facilities are primarily located southwest of Monroe Street and the channel in Indio, and west of the route between Indio Center Drive in Indio and Airport Boulevard in Coachella.

ONSITE HAZARDOUS MATERIAL STORAGE STRUCTURES AND RELEASES

Onsite Hazardous Material Spills - With two exceptions, hazardous material spills have not impacted the soil and/or groundwater underlying the CV Link route. A dry cleaning facility (currently a KFC restaurant at 711 South Palm Canyon Drive in Palm Springs) formerly located immediately northwest of the Tahquitz Creek and South Palm Canyon Drive released a dry cleaning solvent (tetrachloroethene) into the underlying soil and groundwater. The impacted soils within this facility are currently being remediated via vapor extraction technology. Groundwater remediation equipment was not observed within the site vicinity at the time of this assessment, although the groundwater contaminant concentrations have been decreasing since the beginning of soil remedial activities. The impacted groundwater is located beneath the CV Link route at least 600 feet east and 600 feet west of South Palm Canyon Drive. The impacted groundwater underlying this area is at depths between 220 and 240 feet. Due to its depth, the potential that impacted soils will be encountered during the construction of the CV Link route is considered nil. The planned excavations in this area (for signage, etc.) are not anticipated to be greater than 4 feet. As such, these underlying impacted soils are not considered a potential threat to the health of those using the site.

A gasoline fuel station was formerly located within the property located immediately northwest of Tramway Road and State Route 111 (currently the Palm Springs Visitor's Center). Gasoline was released from the associated underground fuel tanks and impacted the underlying soils (not groundwater). The impacted soil was cleaned to the satisfaction of the regulating agency. As such, the gasoline-impacted soils formerly underlying this property are not considered a potential threat to human health or the environment.

Underground Fuel Tank Releases - Gasoline and/or diesel have been released from underground storage tanks at 10 properties located within 300 feet of the CV Link route. These properties include:

- Venita Brudvik, Palm Springs (diesel cleanup completed in 1996)
- Rocky's Pawn Shop, Palm Springs (formerly Mr. Meats: gasoline cleanup completed in 1992)
- Palm Springs Ford Motors (gasoline cleanup completed in 1994)
- Elephant Car Wash, Rancho Mirage (gasoline cleanup completed in 1999)
- City of Indian Wells (gasoline and diesel cleanup completed in 1997 and 2007, respectively)
- Arco AM/PM #5898, La Quinta (gasoline cleanup completed in 2003)
- 76 Service Station #6351, Indio (gasoline cleanup completed in 2002)
- Shell Service Station, Indio (gasoline cleanup near completion)
- Valley Block, Indio (gasoline cleanup completed in 1997)
- Riverside County Road Department Yard, Thermal (gasoline cleanup completed in 1996)

With one exception, the cleanup of these spills has been completed to the satisfaction of the regulatory agencies. Due to their apparent cleanup, the potential that gasoline- and/or diesel-impacted soils will be encountered near these properties during construction of the CV Link project is considered very low. The cleanup of gasoline at the 76 Service Station (#6351) in Indio is reported to be near completion. As such, the gasoline released at this property is also not considered a potential threat to the soils and/or groundwater underlying the site. None of these reported releases occurred within 50 feet of the planned CV Link routes.

Near-Vicinity Surface Spills - Surface spills of potentially hazardous materials (including mineral oil, motor oil, laundry soap, sewage, basic solutions, and metal solutions) have been reported at nine properties located with 300 feet of the CV Link routes. None of these releases were located within 50 feet of the CV Link routes. Each of these releases is reported as having been cleaned, generally on the same day of the release.

Transformer Oils - Pad-mounted electric transformers were observed immediately adjacent to the CV Link route in two areas (east side of Cathedral Canyon Drive and 540 feet northwest of Frank Sinatra Drive). Indications of transformer oil releases from these transformers were not encountered during the site reconnaissance.

Pesticides - Based on a review of the CV Link route and its historical uses, elevated pesticide concentrations are not anticipated in the associated surficial soils. The land within and adjacent to the College of the Desert Campus in Palm Desert, where orchards and date gardens once stood, has been redeveloped. The CV Link routes along the banks of the Whitewater River and Coachella Valley Stormwater Channels were also redeveloped during engineered channelization. During the construction of the campus and the flood control channels, the surficial soils that may have formerly contained residual pesticide concentrations would have been mixed with cleaner deeper soils, resulting in a significant reduction of any pesticide concentrations. Most of the agricultural activities that occurred adjacent to the site between Jefferson Street and Avenue 56 took place in fields and orchards that were located below the existing levee that contains the CV Link route. It is not considered likely that pesticides were sprayed directly onto this levee. Therefore, elevated pesticide concentrations (concentrations that exceed regulatory limits) are not anticipated to exceed regulatory limits anywhere along the CV Link route.

Aerially Deposited Lead - Relatively elevated lead concentrations (higher than background levels) are often encountered within unpaved areas (or formerly unpaved areas) adjoining older roadways. This is primarily the result of deposition of aerially deposited lead (ADL) from historic vehicle emissions. The phasing out of leaded gasoline began in 1973, and has been banned in California since 1992. Representative surface soil samples were collected immediately adjacent to 30 of the oldest roadways that cross the CV Link route. This shallow sampling depth, between the soil surface and depth of 6 inches, typically has the highest lead concentrations. These shallow soils are considered most likely to be disturbed

during construction activities along the CV Link route. Each of the collected soil samples was analyzed for lead. The lead concentrations reported in these collected samples were relatively low, and not considered potentially hazardous to health based on current screening levels. Based on a review of current State requirements, the near-surface soils within the planned CV Link route and adjacent to older roadways can be handled as a non-hazardous waste. It can be reused as construction fill.

RECOMMENDATIONS

Additional environmental studies are not recommended for the CV Link routes. With the exception of the KFC property located on South Palm Canyon Drive in Palm Springs, there are no known onsite conditions that would warrant regulatory involvement, including actions leading to environmental soil sampling, soil remediation, groundwater sampling, and/or groundwater remediation. Soil and groundwater sampling and/or remediation are currently underway at the KFC property. Any additional sampling and/or remediation will be conducted by the responsible party. Existing and long-term conditions at the KFC site will not constrain CV Link construction or use.

Based on the findings of this assessment, additional ADL studies are not considered warranted, nor are recommended for the CV Link routes. As noted above, the lead concentrations reported in soil collected adjacent to the older roadways are not considered a potential threat to human health (less than regulatory health screening levels). Therefore, there are no requirements related to lead monitoring or engineering controls during any planned construction activities along any of the Link routes.

If the pad-mounted or pole-mounted transformers situated within or immediately adjacent to the CV Link routes are required to be removed during construction activities, it is recommended that they be tested for PCBs prior to their removal and disposal. If PCBs are identified, the transformers and associated fluids should be transported offsite and disposed in accordance with Riverside County protocol.

It is recommended that an Environmental Contingency Plan be prepared prior to any subsurface investigation or construction activities along the CV Link route. This plan will help identify and respond to undocumented hazardous material release areas. Although not anticipated, such areas could be the result of historic dump sites, pipeline releases, or illegal dumping. This plan will also be used to identify and respond to accidental hazardous material releases that occur during construction activities, such as an accidental fuel spill. The plan should provide step-by-step responses for the field and office personnel to follow in order to resolve the environmental incident in the quickest manner possible. In addition to listing the required reporting and communication, it should include a detailed description of cleanup methodologies and hazardous material disposal sites.

Initial Site Assessment

For the CV Link Project
Coachella Valley, California

1.0 INTRODUCTION

1.1 Project Background

This Initial Site Assessment (ISA) was prepared for the Coachella Valley (CV) Link project that will pass through the Coachella Valley. The CV Link is a multi-modal transportation facility, the Core Alignment of which will initially connect eight of the nine cities and three Indian reservations in the Coachella Valley. The CV Link Core Alignment is the subject of this ISA. The CV Link will generally follow the alignments of the Whitewater River Channel, Coachella Valley Stormwater Channel, and Tahquitz Creek. Bicycles, pedestrians, and low-speed electric vehicles (LSEVs; up to 25 miles per hour) will use the corridor to access employment, shopping, schools, friends, and recreational opportunities.

The western termini are at Highway 111 (North Palm Canyon Drive) in northern Palm Springs (the Palm Springs Visitor Center at Tramway Road) and South Palm Canyon Drive at Tahquitz Creek in central Palm Springs. The eastern terminus is at Airport Boulevard and the Coachella Valley Stormwater Channel in the City of Coachella and the unincorporated community of Thermal. This terminus provides multi-modal access to the administrative offices of the Coachella Valley Unified School District, John Kelley Elementary School, the La Familia Continuing Education High School, a new Riverside County Sheriff's Station, the Jacqueline Cochran Airport, the Horses in the Sun facility, and the Thermal Club Race Track (under construction).

The CV Link will be comprised of a multi-modal pathway typically ranging from 20 to 34 feet wide and constructed with concrete with special expansion joints. The shoulders of this path, typically 2 feet in width, will be surfaced with decomposed granite or crusher fines. Pedestrian paths will also be surfaced with decomposed granite. In locations where the LSEVs and bicycle traffic cross the pedestrian path, or areas that heavier maintenance or emergency vehicles may use, concrete surfacing shall prevail. Bands of colored concrete at potential conflict areas, such as overpasses, underpasses, mixing zones, and access points, will be used to clearly delineate the use areas. In addition to the path, this project will also include landscaping, restrooms, lighting, and shade structures.

In support of the CV Link, project development requires the identification of hazardous waste issues within the project area (hereafter, the 'routes'). In this capacity, Terra Nova Planning & Research, Inc. was authorized to conduct this ISA. The following report presents the results of the ISA and our conclusions regarding the environmental conditions along the CV Link routes.

1.2 Purpose

The primary purpose of this ISA was to identify any potentially hazardous substances or petroleum products along the CV Link routes. It includes a review of known and suspected releases from route alignments or adjoining properties into the onsite soil, groundwater, or surface water.

This ISA does not include a study of lead in underlying potable water, radon, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, or high-voltage power lines.

1.3 Scope of Work

The scope of work for this ISA included the following tasks:

- Site reconnaissance,
- Historic research (using aerial photographs and topographic maps),
- Testing of soil for aerially deposited lead,
- Agency records review,
- Environmental database review, and
- Preparation of this report.

The references used in this study are listed in Section 11. Color photocopies of selected photographs taken during the site reconnaissance are included in Appendix A. Copies of aerial photographs are provided in Appendix B. Copies of topographic maps are provided in Appendix C. A laboratory report for lead analyses (soil) is provided as Appendix D. Agency documents are provided in Appendix E. The search of select government documents was subcontracted to Environmental Data Resources, Inc. (EDR). A copy of the full EDR report is included as Appendix F. An Initial Site Assessment (ISA) Checklist is provided in Appendix G. Although not discussed herein, this ISA checklist was requested by the California Department of Transportation (Caltrans) in order to summarize this report's findings.

2.0 SITE DESCRIPTION

2.1 Site Location

The site includes approximately 64.34 miles of proposed CV Link travelways that extend from Palm Springs to the City of Coachella (Figure 1). The western termini are at Highway 111 in northern Palm Springs (the Palm Springs Visitor Center at Tramway Road) and at South Palm Canyon Drive at Tahquitz Creek in central Palm Springs. The eastern terminus is at the CVSC and Airport Boulevard (Avenue 56) in the City of Coachella and the unincorporated community of Thermal. The proposed alignments for the travelways are shown in detail on Figures 1 through 69. As noted on these figures, travelways (both determined and alternate routes) pass through the cities of Palm Springs, Cathedral City, Rancho Mirage, Palm Desert, Indian Wells, La Quinta, Indio, and Coachella. It also passes through unincorporated Riverside County and lands belonging to the Aqua Caliente Band of Cahuilla Indians, the Cabazon Band of Mission Indians, and the Twenty-Nine Palms Band of Mission Indians.

The site's alignment largely follows the Whitewater River Channel, the Coachella Valley Stormwater Channel and the Tahquitz Creek Channel (along the Tahquitz Creek Trail). The CV Link routes also follow along portions of Highway 111/North Palm Canyon Drive, San Rafael Drive, Mesquite Avenue, Bob Hope Drive, Magnesia Falls Drive, Parkview Drive, Monterey Avenue, Fred Waring Drive and Miles Avenue.

This ISA included all of the proposed travelways (CV Link routes), as well as the areas 1/8 mile out from each side of the travelway. In this ISA, the CV Link alignment has been broken into 11 areas that are defined by segment designations. These segments, which are referred to herein, are depicted on the CV Link Master Plan dated May 2016 and listed below.

TABLE 1

SITE SEGMENTS AND LOCATIONS

Segment No.	Location (See Map Pages 1 through 69)	Distance (miles)
1	Highway 111 to East Vista Chino	10.16
2	East Vista Chino to Tahquitz Creek Confluence	2.03
2a	South Palm Canyon Drive to Whitewater River Confluence	6.25
3	Channel Confluence to Country Club Drive	7.73
4	Country Club Drive to Monterey Avenue	6.38
5	Monterey Avenue to Fred Waring Drive	4.91
6	Fred Waring Drive to Washington Street	9.55
7	Washington Street to Coachella Canal	3.83
8	Coachella Canal to Van Buren Street	4.75
9	Van Buren Street to Tyler Street	3.56
10	Tyler Street to Airport Boulevard (Avenue 56)	3.66

2.2 Site and Vicinity Characteristics

The characteristics of the CV Link route vary between Palm Springs and Coachella. They are described in detail in Section 3.1 of this report. The route begins in northwestern Palm Springs along approximately ¾ mile of Highway 111. It then traverses about 10 miles along an unpaved flood control service road on the right bank of the Whitewater River Channel. In central Palm Springs, the route is primarily along 6 miles of paved trails along Tahquitz Creek. The route continues to follow established and unestablished trails through residential areas and along the banks of the Whitewater River Channel and Cathedral Canyon Wash through Cathedral City and Rancho Mirage.

In Rancho Mirage, the route periodically leaves the Whitewater River area and passes along Highway 111, Bob Hope Drive, and other roadways.

In Palm Desert, the route remains on roadways, including Parkview Drive and Magnesia Falls Drive. It also passes through the College of the Desert campus in Palm Desert.

After Magnesia Street in Palm Desert, the route again continues along the Whitewater River Channel, primarily along established service roads. Portions of this route traverse through, or adjacent to, well-established golf courses. Between Cook Street and Fred Waring Drive, alternative routes are provided within the channel, as well as on each bank of the channel. In Indian Wells, the route crosses Fred Waring Drive and the Whitewater River Channel and divides to provide a route along the north (left) bank of the Whitewater River Channel as far as Washington Street. An alternative alignment traverses along El Dorado Drive south to Highway 111 and then eastward along Highway 111. It continues along the top of each bank of the Whitewater River Channel from Miles Avenue through Indian Wells to Washington Street. It also passes along the southern side of Miles Avenue between Highway 111 and Washington Street. This portion of the route follows sidewalks, unpaved service roads, or undeveloped areas.

After Washington Street, the route primarily stays on unpaved channel service roads along the right bank of the Whitewater River Channel, which from this point eastward is referred to as the Coachella Valley Stormwater Channel. It traverses on channel service roads through Indio, Coachella, and Thermal, where it ends at Airport Boulevard (Avenue 56).

The properties adjoining the CV Link vary considerably. They primarily include undeveloped lands, parks, golf courses, residential developments, commercial shopping centers, schools, hotels, and roadways. Other property uses included agricultural fields, equipment storage yards, water tanks, and wastewater treatment facilities. Industrial properties were not located adjacent to the current route.

2.3 Environmental Setting

2.3.1 TOPOGRAPHY

The northwestern end of the proposed route is at an elevation high of 740 feet above mean sea level. The elevation along the travelways decreases as it travels toward the east and south. The elevation is lowest on the route's southeastern terminus. At this point, the elevation is 125 feet below mean sea level. In general, the site slopes gently toward the southeast, at approximately the same gradient as the Whitewater River Channel and Coachella Valley Stormwater Channel.

2.3.2 GEOLOGY

Soils underlying the CV Link alignments are reported to be comprised of Recent-age alluvial (river) deposits, dune deposits, and lake deposits (Rogers, 1965). The alluvial deposits underlay the portion of the site located between the northwestern end in Palm Springs and approximately El Dorado Drive in Indian Wells. These deposits are comprised of mixtures and layers of silty sand, sand, gravel, and cobbles. The gravel and cobble content was noted to decrease substantially prior to and just after the Whitewater River's confluence with Tahquitz Creek. Dune sands are reported between about El Dorado Drive and Jefferson Street. These deposits are typically comprised of loose silty fine sand to fine sand. Lake deposits underlie the portion of the site between about Jefferson Street and the site's southeastern terminus. These deposits are generally comprised of mixtures and layers of fine sand, silt, and clay.

The south branch of the San Andreas Fault is the closest known active fault to the site. It is located between 1.5 and 8.5 miles from the site. It is approximately 1.5 miles from the site at its intersection with Jackson Street. It is 85 miles northeast of the site along its route next to Parkview Drive (Jennings, 2010).

2.3.3 HYDROGEOLOGY

The groundwater underlying almost the entire site has a southeasterly flow direction, coincident with the general channel drainage direction and the topographic gradient (Moyle, 1974). The depths to groundwater underlying the site were obtained from data collected from widely-spaced properties that had groundwater monitoring wells. These properties and the associated water depths are provided on the following table.

TABLE 2

GROUNDWATER DEPTHS WITHIN SITE VICINITY

Location	Groundwater Depth	Date Measured	Source
711 S. Palm Canyon Dr., Palm Springs (Northwest of Tahquitz Creek and South Palm Canyon Dr.)	215.72 to 243.27 feet (16 wells)	October 28, 2015	Arcadis, 2016
69010 Highway 111, Cathedral City (Northeast of Highway 111 and Date Palm Dr.)	206.10 to 208.47 feet (4 wells)	September 2, 2009	Delta, 2010
44775 San Pablo Ave., Palm Desert (Southwest corner of San Gorgonio Way and	234.35 to 237.50 feet (5 wells)	April 30, 2012	ATC, 2012

Location	Groundwater Depth	Date Measured	Source
San Pablo Ave.)			
43411 Monroe St., Indio (Southwest corner of the Whitewater River Channel and Monroe St.)	74.15 to 76.22 feet (5 wells)	April 21, 2009	Wayne Perry, 2009
45-242 Commerce St., Indio (Southeast of Ave. 45 and Commerce St.)	43.73 to 47.47 feet (7 wells)	August 21, 2013	RM Environmental, 2012
85119 Avenue 50, Coachella (Southwest of Avenue 50 and Highway 111)	26.31 to 28.43 feet (11 wells)	November 20, 2014	EnviroApplications, 2015
56491 Highway 111, Thermal (Northwest of Highway 111 and Church St.)	10.28 to 16.85 feet (21 wells)	November 18, 2014	Frey, 2015

As noted on the table above, the groundwater depths vary greatly along the CV Link alignment. Groundwater is typically encountered at depths between 200 and 250 feet in the routes' western and central portions. These areas are underlain with coarse-grained alluvial soil. The depth to groundwater decreases dramatically in the lakebed deposits east of Jefferson Street. As noted above, the depth to groundwater beneath the site decreases toward the east.

2.4 Historical Review of the CV Link Routes and Adjoining Properties

The following section presents a general historical review of each section of the route. For consistency, the route was broken down into segments as described in Section 2.1.

Palm Springs Area – Highway 111 to the Whitewater River/Tahquitz Creek Confluence (Sections 1 & 2)

With the exception of roadway crossings, the portion of the route between Highway 111 and the Whitewater River/Tahquitz Creek channel confluence was undeveloped and in a natural state up to at least 1955. The existing levee along the Whitewater River Channel was constructed between Highway 111 and just east of Indian Canyon Drive between 1955 and 1975. It was extended further south to its confluence with Tahquitz Creek between 1999 and 2002. The Desert Highland Park was developed within the route between 1965 and 1975. San Rafael Drive was constructed within the route in the 1970s. Sunrise Way was constructed in the 1990s.

The properties adjoining this portion of the route were covered with soil and a relatively sparse growth of vegetation up to at least 1955. Residential developments began to be developed adjacent to the route in the 1960s and 1970s. A fuel station (currently the Palm Springs Visitor' Center) was located immediately adjacent to the route's northwestern terminus between at least 1975 and 1996.

Palm Springs Area – Along Tahquitz Creek (Section 2a)

With the exception of roadways crossings, the portion of the route along Tahquitz Creek was primarily vacant up to at least 1948. Demuth Park was developed within the route in the 1950s. Trails, sidewalks, roadways, and golf courses have been slowly developed through this portion of the route since the 1970s.

The properties adjoining this portion of the route were mostly undeveloped up to at least 1948. Commercial businesses began to be developed in the vicinity of South Palm Canyon Drive between 1948 and 1955. Residential apartments and developments were constructed along North Riverside Drive during this period. The residential developments and golf courses currently adjoining this portion of the route were mostly constructed after the 1970s.

Cathedral City – Channel Confluence to Country Club Drive (Section 3)

This portion of the route was undeveloped, except for roadway crossings, up to at least 1955. Jenkins Trail, approximately 1.5 miles in length, was developed in this segment's northwestern portion, just west of Cathedral Canyon Drive, between 1975 and 1984. The Joe Butler Trail, more than 1 mile in length between Frank Sinatra Drive and Country Club Drive, was constructed within this segment between at least 1996 and 2002.

This segment passed through undeveloped land east and west of Cathedral Canyon Drive up to at least 1954. The Whitewater River's route was changed to its current position in the mid-1960s. The route has been located along the upper right and left banks of the Whitewater River Channel since this time. Service roads were developed along some of these banks between 1984 and 1994.

Commercial businesses and residential developments have adjoined this portion of the route since 1996. The commercial businesses, which include automobile dealers and motels, are located south of this segment between Cathedral Canyon Drive and Frank Sinatra Drive. These properties were primarily developed between 1984 and 1994. The remaining developed properties are in residential use. The residential development located west of Cathedral Canyon Drive was constructed between 1978 and 1984. The residential developments located south of Frank Sinatra Drive were constructed between the 1950s and 1980s.

Rancho Mirage – Country Club Drive to Monterey Avenue (Section 4)

Highway 111 has been located adjacent to the proposed route in this segment (between Country Club Drive and Paxton Drive) since at least 1948. A sidewalk was developed along most of this area between 1984 and 1996. The portion of this segment along the right bank of Whitewater River Channel has been undeveloped since at least 1948. Between the Whitewater River Channel and Monterey Avenue, the route has primarily passed through undeveloped land up to the 1940s. Roadways were developed along this segment in the 1940s and 1950s. Dwellings and commercial properties have been periodically constructed adjacent to the route and these adjoining roadways since 1948.

Palm Desert – Monterey Avenue to Fred Waring Drive (Section 5)

In the 1940s and 1950s, the route within this segment traversed primarily through undeveloped and agricultural lands. Portions of this segment passed through a pre-existing river bed. The river was rerouted and channelized into its current position in the mid-1960s. The western portion of the College of the Desert campus was established adjacent to this segment between 1958 and 1962. The eastern portion of this campus has been developed slowly since the 1980s. A mobile home park was established northeast of the campus and Magnesia Falls Drive during the 1960s and 1970s. Additional residential developments were constructed along Magnesia Falls Drive between the 1970s and 1980s. The portion of this segment between of Magnesia Falls Drive and Fred Waring Drive remained mostly in agricultural use up to at least 1984. It was redeveloped with residential developments and a high school between 1984 and 1994.

The properties adjoining this segment have been of mixed use, being primarily developed for residential, agricultural, or educational purposes.

Indian Wells - Fred Waring Drive to Washington Street (Section 6)

The route within this section passed through predominantly undeveloped land up until at least the 1950s. Orchards and date gardens were located east of El Dorado Drive, between Highway 111 and the river in the 1940s and 1950s. These orchards were mostly removed before the 1970s. This land remained undeveloped until the 1990s. Resorts and golf courses were constructed in this area (between El Dorado Drive and Miles Avenue) in the early 1990s. This land use has not changed significantly since this time.

Single-family dwellings and barns were scattered throughout this area in the 1950s. Residential developments were constructed west of El Dorado Drive in the 1980s. A residential development was also constructed immediately south of the channel between Miles Avenue and Washington Avenue between 2002 and 2004. The commercial shopping center southwest of the channel and Washington Street was primarily developed between 1996 and 2002.

The Whitewater River was not channelized through this section until the mid-1960s.

La Quinta/Indio - Washington Street to Coachella Canal (Section 7)

The route between Washington Street and Jefferson Street passed through undeveloped land up to at least 1948. The Whitewater River bed meandered un-channelized within and adjacent to this section up until the mid-1960s, when it was channelized. The route through this area has primarily been on the upper bank of the channel since the 1960s.

Dwellings were developed adjacent to the route between Dune Palms Road and Jefferson Street in the 1960s and 1970s. Additional residential developments, the La Quinta High School, and commercial shopping centers were developed in this area between the mid-1980s and the present.

Between Jefferson Street and the Coachella Canal, the Whitewater River was very close to its existing location since at least 1944. The river has been channelized through this area since at least 1944. The route along the top of the channel's right bank has been in a similar state since this time.

The areas located east of the route in this area were in agricultural use (primarily orchards) between at least 1944 and 1972. These orchards were slowly replaced with mostly residential neighborhoods in the 1970s and 1980s.

Indio - Coachella Canal to Van Buren Street (Section 8)

The route along the top of the channel's right river bank appears to have been in a similar state since at least 1944. Similar to above, the river has been channelized through this area since at least 1944.

The areas located south of the channel and the route were primarily in agricultural use between at least the 1940s and 1950s. These lands were primarily redeveloped with residential developments between the 1950s and 1975. Some commercial and relatively small manufacturing facilities were also developed south of the route, between Indio Boulevard and Monroe Street, during this period.

East Native Lands - Van Buren Street to Tyler Street (Section 9)

The Whitewater River appears to meander un-channelized through this section in the 1940s and 1950s. A levee was placed along its right bank between the 1950s and 1970s. It was fully channelized between 1972 and 1975. The route has been along the top of the right bank of this channel since 1975.

The properties located immediately west of this portion of the route have primarily been in vacant and undeveloped states since the 1940s. A relatively small amount of agriculture was conducted in this area. Other adjoining property uses have included auto salvage yards and recycling facilities.

Coachella - Tyler Street to Airport Boulevard (Section 10)

The river meandered un-channelized through this section in the 1940s. It was channelized between the 1940s and 1950s. The route has been along the top of the right bank of this channel since the 1950s.

The properties located immediately west of this portion of the route were primarily in vacant and undeveloped states since the 1940s. These lands were in agricultural use (fields and row crops) in the 1970s and 1980s. Agricultural activities remain ongoing periodically on these adjoining lands. A residential development was constructed between the route and Tyler Street in the 1960s. An additional

residential development was developed northwest of the route and Avenue 52 between 1989 and 1990. Other adjoining property uses in this segment have included recycling facilities, a sewer treatment facility, a solar array, equipment yards, and apparent small manufacturing facilities.

3.0 ROUTE RECONNAISSANCE

3.1 Route Observations

Terra Nova Planning & Research Inc. representatives visited the study area in order to assess its current uses and to visually search for indications of surface and subsurface contamination. These reviews were conducted on July 10, July 24, and August 8, 2015. A final route review was conducted on March 19, 2016. Selected photographs taken during the route visits are included in Appendix A. Observations made during the visits are presented on the table below.

TABLE 3

SUMMARY OF ROUTE OBSERVATIONS

Location	Description
Segment 1 – North Palm Springs (Highway 111 to East Vista Chino; see Photo Nos. 1 through 8)	
Highway 111 & Tramway Rd.	This route begins next to the asphalt-paved parking lot of the Palm Springs Visitor Center. One alternate route then traverses through the undeveloped land northeast of the visitor's center. A determined alignment crosses to the northern side of North Palm Canyon Drive and then traverses to the northeast through a grass lawn.
Tramway Rd. to Chino Creek Levee (west of Highway 111)	From the visitor's center, the alternate route continues through undeveloped land along the southern side Highway 111 to the Chino Creek Levee.
Tramway Rd. to Chino Creek Levee (east of Highway 111)	From Tramway Road (San Rafael Drive), the determined alignment initially traverses along a concrete-paved sidewalk that adjoins Highway 111. It then traverses in a grass-covered lawn between the end of the sidewalk and Gateway Drive. Between Gateway Drive and Chino Creek, this route is then located along (on or adjacent to) a concrete-paved sidewalk that is adjoined by well-maintained landscaped areas.
Chino Creek Levee between Highway 111 and Indian Canyon Dr.	From Highway 111, this segment follows an unpaved service road along the top of a levee. This service road is surfaced with loose sand and gravel. The levee's sides are unpaved.
Desert Highland Park	The southern portion of this route within Desert Highland Park begins adjacent to a paved parking lot. This segment then passes along the western side of the park and then north of the park through undeveloped land until it intersects the Chino Canyon Levee.
Whitewater River Levee between Indian Canyon Dr. and Gene Autry Trail	After passing over Indian Canyon Drive, this segment continues along the unpaved service road along the top of the levee. The portion of this levee facing the rivers is surfaced with concrete. The upper portion is covered with loose sandy soil.
Whitewater River Levee to San Rafael Drive via Sunrise Way	An alternate route leaves the Whitewater River levee and traverses south through undeveloped land covered with sandy soil and sparse vegetation. It then continues south along the center median of Sunrise Way, which is partially landscaped with desert vegetation.
Sunrise Way to Whitewater River Levee via San Rafael Drive	Between Sunrise way and the Whitewater River levee, this segment passes along a portion of San Rafael Drive and then along the sides of a former golf course. This area was undeveloped and covered with sandy soil.

Location	Description
Gene Autry Trail to Vista Chino	The portion of this segment between Gene Autry Trail and Vista Chino remains along an unpaved service road along the top of a levee. The service road remains covered with sandy soil.
Summary: Potentially hazardous material sources and/or releases were not identified within or immediately adjacent to this segment. Nuisance debris, primarily empty food and beverage containers was observed along Highway 111 and the levee.	
Segment 2 – Central Palm Springs (East Vista Chino to Tahquitz Creek Confluence; see Photo Nos. 9 through 14)	
Vista Chino to Dinah Shore Drive	The portion of this segment between Vista Chino and Dinah Shore Drive is similar to that encountered northwest of Gene Autry Trail. It travels along an service road on top of the levee. The service road remains covered with loose sand and gravel. An alternate route immediately south of Vista Chino passes through a small channel (stormwater outlet) that is surfaced with sandy soil.
Dinah Shore Dr. to 34th Ave.	Southwest of Dinah Shore Drive, this segment is located on a paved and unpaved service road.
34th Ave. to Tahquitz Creek	At 34th Avenue, this segment continues south along a concrete-paved trail. This trail continues to Tahquitz Creek, where it passes over the creek and continues to the south.
Summary: Potentially hazardous material sources and/or releases were not identified within or immediately adjacent to this segment, including within the nuisance debris observed beneath the Ramon Road Bridge.	
Segment 2A – Tahquitz Creek (Belardo Road to Whitewater River Confluence; Photo Nos. 15 to 22)	
South Palm Canyon Dr. to Sunrise Way	This segment begins at South Palm Canyon Drive, on the northern side of Tahquitz Creek Channel. The KFC property located immediately northwest of this intersection has an operating vapor extraction system, indicating that the underlying soils have been impacted with volatile organic compounds. Groundwater monitoring wells within and adjacent to this property indicate that the groundwater has also been impacted. East of South Palm Canyon Drive, this segment passes along the southern side of North Riverside Drive. Most of this segment is located along a paved sidewalk that is bordered by well-maintained landscaped areas (referred to as the Tahquitz Creek Trail).
Sunrise Way Area (North Riverside Dr. to Mesquite Ave.)	One alternative route in this area passes along the eastern side of Sunrise Way, which has a paved sidewalk and adjoining undeveloped and landscaped areas. A second alternative route passes through the Tahquitz Creek Channel and then toward the east and south along an unpaved roadway adjacent to a canal. Both routes terminate at Mesquite Avenue.
Sunrise Way to Farrel Dr. (along Mesquite Ave.)	From Sunrise way, this segment traverses passes within the median of Mesquite Avenue (a four-lane roadway) to Farrell Drive.
Farrel Dr. to Compadre Rd. (along Mesquite Ave.)	Between Farrell Drive and Compadre Road, the route passes along the northern side of Mesquite Avenue. A concrete-paved sidewalk adjoined by landscaped areas is located along the northern side of Mesquite Avenue.
Compadre Rd. to El Cielo Rd.	From Compadre Road, this segment traverses north along a brush-covered drainage ditch until it reaches Tahquitz Creek. It then traverses east along the southern side of Tahquitz Creek through soil and brush-covered areas. At Cielo Road, it traverses north to Mesquite Avenue.
Cielo Rd. to Demuth Park	From Cielo Road, this segment traverses toward the east along a paved sidewalk on the southern side of Mesquite Avenue. It then traverses south into and through Demuth Park.
Demuth Park to Gene Autry Trail	From Demuth Park, this segment traverses eastward on a path covered with sand and pea gravel between Demuth Park and a golf course that occupies Tahquitz Creek. East of Demuth Park, this trail is paved with asphalt.
Gene Autry Trail to Crossley Rd./Golf Club Dr.	This route passes beneath Gene Autry Way and then up through a short portion of a golf course where it intersects an existing paved bike path. An alternate route passes over a pond within the golf course. This bike path continues

Location	Description
	eastward to Crossley Road. The segment then traverses south along an existing concrete-paved sidewalk along the western side of Crossley Road/ Golf Club Drive. From this roadway, there are two planned routes to the Whitewater River Channel.
Along 34th Ave. to the Whitewater River Channel	From Crossley Road/Golf Club Drive, this segment traverses along the northern side of 34th Avenue until it reaches the Whitewater River Channel.
Golf Club Dr. to the Whitewater River Channel	From Golf Club Drive, this segment is located on a concrete-paved walkway along the southern side of Tahquitz Creek.
Summary: A release of potentially hazardous materials (dry cleaning solvents) was evident at the KFC property located immediately northwest of South Palm Canyon Drive and Tahquitz Creek. This release is discussed further in Section 6.1.1. No other potentially hazardous material sources and/or releases were identified within or immediately adjacent to this segment.	
Segment 3 – Cathedral City (Channel Confluence to Country Club Drive; Photo Nos. 23 to 28)	
Jenkins Trail – from the Channel Confluence to Cathedral Canyon Dr.	This segment (a determined alignment) traverses south from the channel confluence along an asphalt-paved path that is located between residential and commercial properties. It is fenced on each side the entire route
Channel Confluence to Cathedral Canyon Dr.	This route passes on each side of the Whitewater River Channel between the channel confluence and Cathedral Canyon Drive. These routes are located within an existing golf course. The routes on each side of the river contain either lawn and/or concrete-paved cart paths.
Cathedral Canyon Dr. to Date Palm Dr.	Between Cathedral Canyon Drive and Date Palm Drive, this route is located on top of a levee that is partially paved with asphalt. Commercial businesses border the southern side of this route. A pad-mounted transformer is located immediately adjacent to the route, approximately 35 feet east of Cathedral Canyon Drive. Possible releases from this transformer were not observed at the time of this assessment.
Jenkins Trail to Date Palm Dr. (along Cathedral Canyon Wash)	An alternate route between Jenkins Trail and Date Palm Drive follows the left bank of Cathedral Canyon Wash between Jenkins Trail and Cathedral Canyon Drive. After it passes over Cathedral Canyon Drive, it then traverses along the right bank of Cathedral Canyon Wash to Date Palm Drive. The banks of the Cathedral Canon Wash are covered with sandy soil. The sides of the wash are surfaced with concrete.
Date Palm Dr. to Frank Sinatra Dr.	This route is primarily located along an unpaved service road at the top of the western bank of the Whitewater River Channel. A roadway along this bank It is covered with sandy soil a light to heavy growth of vegetation. A portion of this route traverses through asphalt-paved parking lots (for adjoining commercial properties) adjacent to the channel. A pad-mounted electric transformer was located immediately adjacent to this route approximately 530 feet northwest of Frank Sinatra Drive.
Frank Sinatra Dr. Area	Alternatives routes pass north and south of Frank Sinatra Drive. The northern route (a determined alignment) passes along a paved side road. The southern route (an alternate alignment) passes adjacent to the roadway, within the channel.
Frank Sinatra Dr. to Country Club Dr.	Southeast of Frank Sinatra Drive, alternate routes pass along each side of the Whitewater River Channel for about ½ mile. The southern (west bank) alternate route is covered with soil and sparse vegetation. It is located between a fence and the paved channel slope. The northern (east bank) alternate route follows the Joe Butler Trail, which is a well maintained trail surfaced with sandy soil and/or asphalt. This trail crosses the Whitewater River Channel and then travels along its right bank. This trail passes between residential developments until it reaches Country Club Drive.
Country Club Dr.	This route passes a short distance along the northern side of Country Club Drive. In this area, it located on or adjacent to a concrete-paved sidewalk that is

Location	Description
	adjoined by well-maintained lawn.
Summary: With the exception of two pad-mounted electric transformers, potentially hazardous material sources were not identified within or immediately adjacent to this segment. Potentially hazardous material releases, including from the transformers, were not observed within this segment.	
Segment 4 – Rancho Mirage (Country Club Drive to Monterey Avenue; Photo Nos. 29 to 34)	
Country Club Drive to Paxton Drive (along Highway 111)	This route traverses along the western/southern side of Highway 111 on a concrete-paved sidewalk. This sidewalk is bordered by well-maintained landscaped areas.
Paxton Drive to Mirage Road along Highway 111	This alternative route resumes on the sidewalk along the western side of Highway 111.
Magnesia Channel between Highway 111 and Whitewater River Channel	This alternate route passes along the right bank of the Magnesia Channel. This channel bottom is covered with sandy soil and sparse vegetation. Its sides are lined with concrete.
Paxton Dr. to Magnesia Canyon Channel	South of Paxton Drive, this alternate route passes through a vacant lot covered with crushed asphalt. It then passes along the right bank of the Whitewater River Channel, which is comprised of a gentle slope covered with soil and sparse vegetation. This alternative route passes over the Magnesia Canyon Channel.
Magnesia Canyon Channel to Bob Hope Dr. (along the Whitewater River Channel)	East of Magnesia Canyon Channel, this segment traverses along the upper and lower sides (right bank) of the Whitewater River Channel. The route in this area is unpaved and either following an existing vehicle path or passes through sandy areas with sparse vegetation.
San Jacinto Dr. and Rancho Palmas Dr.	An alternate route traverses away from the channel to San Jacinto Drive. The alternate route then traverses along San Jacinto Drive to Rancho Las Palmas. The route then travels northeast within a parking lot that is located along the southern side of Rancho Las Palmas Drive. It continues in the parking lot until it reaches Bob Hope Drive.
Commercial Parking Lot Driveway between Rancho Palmas Dr. and Bob Hope Dr.	An alternative route traverses southeast from the intersection of Rancho Palmas Drive and San Jacinto Drive. It parallels a driveway that is located within a relatively large commercial shopping center.
Bob Hope Dr. between the Whitewater River Channel and Highway 111	This route passes between the Whitewater River Channel and Highway 111 along sidewalks on the eastern or western sides of Bob Hope Drive. The sidewalks are adjoined by well-maintained landscaped areas.
Highway 111 between Bob Hope Dr. and Parkview Dr.	Alternate routes pass along each side of Highway 111 between Bob Hope Drive and Parkview Drive. One alternative route is located along this roadway's eastern (north-bound) side. An alternate route along the western (south-bound) side of Highway 111 is located within a concrete-paved sidewalk.
Desert Dr. and Rio Del Sol Rd.	An alternate route leaves Highway 111 and travels west along the northern side of Desert Drive and then south along Rio Del Sol Road. This alternate route leaves these roadways and traverses through undeveloped properties before it connects back with Highway 111. These undeveloped properties are covered with sandy soil and rock outcrops.
Park View Dr. between Highway 111 and Monterey Ave.	This route initially traverses through a concrete-lined channel for approximately 440 feet. It then passes along the northern side of Park View Drive. Bike lanes are currently located on each side of this roadway.
Summary: Potentially hazardous material sources and/or releases were not identified within or immediately adjacent to this segment.	
Segment 5 – Palm Desert (Monterey Avenue to Fred Waring Drive; Photo Nos. 35 to 40)	
Monterey Ave. between Magnesia Falls Dr. and Park View Dr.	This section traverses along a sidewalk on the eastern side of Monterey Avenue. The sidewalk is adjoined by well-maintained landscaped areas.
Magnesia Falls Dr. between Monterey Ave. and San	This route is primarily located along the southern side of Magnesia Falls Drive. It is located along a relatively wide concrete-paved path that is adjoined by

Location	Description
Pascual Channel	well-maintained landscaped areas.
College of the Desert Campus between Monterey Ave. and San Pablo Ave.	This route is on asphalt-paved roadways that pass through the College of the Desert Campus.
San Pablo Ave.	This route is located with the median of San Pablo Avenue. This median is partially landscaped with well-established trees.
San Pasqual Channel	This alternate route passes along the eastern side of San Pasqual Channel between Magnesia Falls Drive and the Whitewater River Channel. It is currently paved with asphalt that is adjoined by soil.
Magnesia Falls Dr. between San Pascual Channel and the Whitewater River Channel	This alternate route is located along the northern side of Magnesia Falls Drive. It is within, or adjacent to, a concrete-paved sidewalk. Some portions of this sidewalk are adjoined by landscaped areas.
Whitewater River between San Pasqual Channel and Magnesia Falls Dr.	This alternate route is located along the top of the right bank of the Whitewater River Channel. Most of this area is relatively level and covered with soil and relatively sparse growth of vegetation.
Whitewater River between Magnesia Falls Dr. and Cook St.	This route, also located along the top of the right bank of the Whitewater River Channel, is located on a concrete-paved path adjoined by soil.
Cook St. to Fred Waring Dr.	Between Cook Street and Fred Waring Drive, alternative routes are provided within the channel, as well as on each bank of the channel. Unmaintained soil-covered pathways are located along each side of the channel. The channel bottom in this area is covered with sandy soil and sparse vegetation. Another alternate route in this area leaves the channel and traverses south to Fred Warring Drive along an unnamed service road for an electrical substation. This service road is paved and is adjoined by well-maintained landscaped areas.
Summary: Potentially hazardous material sources and/or releases were not identified within or immediately adjacent to this segment.	
Segment 6 – Indian Wells (Fred Waring Drive to Washington Street; Photo Nos. 41 to 46)	
Fred Waring Dr. to El Dorado Dr.	This alternate route is located along the top of the riverbank. It is generally covered with grass lawn.
El Dorado Dr. between the Whitewater River Channel and Highway 111	This alternate route is located along the eastern side of El Dorado Drive. A concrete-paved path within this route is adjoined by well-maintained landscaped areas. Part of this route crosses driveways to the city hall property.
Highway 111, between El Dorado Dr. and Miles Ave.	This alternate route is located along the northern side of Highway 111. A concrete-paved sidewalk and landscaped areas are located along most of this area. One portion is covered with soil, and another is covered with a lawn.
Whitewater River between El Dorado Dr. and Existing Channel Bridge	This alternate route is located along the top of the left bank of the Whitewater River Channel. It is currently part of a well-maintained golf course. The route passes over a bridge that spans the Whitewater River Channel.
Whitewater River between existing Channel Bridge and Miles Ave.	Alternate routes are located on each side of the river between the channel bridge and Miles Avenue. The northern route is located within landscaped portions of a golf course. It then traverses through undeveloped areas covered with sand and some desert vegetation. The southern route initially passes between the golf course and adjoining hotel. It is located on a concrete-paved sidewalk adjoined by well-maintained landscaping. It then passes along the top of the right riverbank, which is highly eroded and surfaced with sandy soil and sparse vegetation.
Whitewater River between Miles Ave. and Deep Canyon Channel	In this area, there are alternate routes on the northern and southern sides of the Whitewater River Channel, both located at the top of the riverbank. The northern alternate route is covered with sandy soil and sparse desert vegetation. A trail or pathway is not located within this area. An unpaved service road is located along the southern alternate route in this area.
Miles Ave. between the	This determined route traverses along a sidewalk along the south side of Miles

Location	Description
Whitewater River Channel and Washington St.	Avenue. This sidewalk is adjoined by landscaped areas. An apparent sewer pumping station is located adjacent to this route, just north of the Whitewater River Channel near the western side of Miles Avenue. A relatively new diesel-powered generator is located within this pumping station. The associated diesel tank is located at the base of the generator. Possible diesel spills were not observed in this area. Due to its size, this engine and associated tank are not considered a significant hazardous material source.
Whitewater River between Deep Canyon Channel and Washington St.	The alternate route located along the northern side of the river remains in an undeveloped area that is covered with sand and sparse vegetation. The southern alternate route passes along the base of a moderately steep hillside covered with rock. There are no through-going trails at the base of this hillside. East of the hill, this southern alternate route is located on a service road that is surfaced with decomposed granite.
Washington St. between Miles Ave. and the Whitewater River Channel	A determined route passes along a sidewalk on the western side of Washington Street. The route leaves the sidewalk and then crosses the bottom of the channel and stops on its right bank.
Summary: Potentially hazardous material sources and/or releases were not identified within or immediately adjacent to this segment.	
Segment 7 – La Quinta/Indio (Washington Street to Coachella Canal; Photo Nos. 47 to 52)	
Whitewater River Channel between Washington St. and Jefferson St.	The route is located in the upper right bank of the Whitewater River Channel between Washington Street and Jefferson Street. It is located along an unpaved service road that is covered with silty soil and sparse vegetation. This route traverses under Washington Street, under Adam Street, over Dune Palms Road, and under Jefferson Street. With the exception of Dune Palms Road, these roadways have bridges over the Whitewater River Channel.
Whitewater River Channel between Jefferson St. and the Coachella Canal	East of Jefferson Street, the alignment remains along the right bank of the Whitewater River Channel. An unpaved service road is not present along its route at the top of the bank just east of Jefferson Street. After 8 single-family dwellings, it traverses along the edge of a vacant property. It then crosses through the La Quinta Channel. Between the La Quinta Channel and Coachella Canal, the route stays along an unpaved road at the top of the Whitewater River Channel's right bank.
Summary: Potentially hazardous material sources and/or releases were not identified within or immediately adjacent to this segment.	
Segment 8 – Indio (Coachella Canal to Van Buren Street; Photo Nos. 53 to 58)	
Coachella Canal to Van Buren St.	Along this segment, the route remains along the unpaved service road at the top of the right bank of the Whitewater River Channel. It crosses Fred Waring Drive, Indio Boulevard (and adjoining train tracks), Monroe Street, Jackson Street, Avenue 44, and Golf Center Parkway. It has connections to each of these roadways.
Summary: Potentially hazardous material sources and/or releases were not identified within or immediately adjacent to this segment.	
Segment 9 – East Native Lands (Van Buren Street to Tyler Street; Photo Nos. 59 to 63)	
Van Buren St. to Tyler St.	This segment remains along the unpaved service road at the top of the right bank of the Whitewater River Channel. It crosses Dillon Road and Avenue 50. It has connections to each of these roadways. Utility poles and associated electric lines are located along a portion of this route.
Wild Bird Center	The route leaves the right bank of the Whitewater River Channel and travels approximately 0.94 mile south on an unpaved roadway to a wild bird sanctuary. A sewer treatment facility is located along the western side of this roadway.
Summary: Potentially hazardous material sources and/or releases were not identified within or immediately adjacent to this segment.	

Location	Description
Segment 10 - Coachella (Tyler Street to Airport Boulevard; Photo Nos. 64 to 68)	
Tyler St. to Airport Blvd.	This segment remains along the unpaved service road at the top of the right bank of the Whitewater River Channel. It crosses under Avenue 52. Utility poles and associated electric lines are located along a portion of this route.
Summary: Potentially hazardous material sources and/or releases were not identified within or immediately adjacent to this segment.	

3.2 Project Vicinity

Properties adjoining the route were reviewed for evidence of possible contaminant releases. These properties were noted to be of mixed use, including residential, commercial, and vacant lands. A brief description of the properties adjacent to each segment is provided below.

TABLE 4

SUMMARY OF ADJOINING PROPERTY USES

Adjoining Property Descriptions
Segment 1 – North Palm Springs (Highway 111 to East Vista Chino)
The properties adjoining this segment included: - Palm Springs Visitor's Center - Undeveloped land - A park (Desert Highland Park) - Roadways (Highway 111, Indian Canyon Drive, Gene Autry Trail, & Vista Chino) - Residential developments - Self-storage facility - Towing yard Indications of potentially hazardous material sources and/or releases were not observed within the visible portions of the properties that adjoined this segment.
Segment 2 – Central Palm Springs (East Vista Chino to Tahquitz Creek Confluence)
The properties adjoining this segment included: - Undeveloped land - Roadways (Vista Chino, Ramon Road, Dinah Shore Drive, and 34th Avenue) - Residential developments - Golf courses - Parking lots - Self-storage facility - Recreational vehicle parking yard - Apparent golf course maintenance yard Indications of potentially hazardous material sources and/or releases were not observed within the visible portions of the properties that adjoined this segment.
Segment 2A – Tahquitz Creek (Belardo Road to Whitewater River Confluence)
The properties adjoining this segment included: - Undeveloped land

Adjoining Property Descriptions

- Commercial properties (restaurants, used car dealership, car tire shop, antique shop, & thrift store)
- Roadways (South Palm Canyon Drive, North Riverside Drive, Sunrise Way, Farrell Drive, El Cielo Road, Mesquite Avenue, Gene Autry Trail, Crossley Road, Golf Course Drive, and 34th Avenue)
- Residential developments
- Golf courses
- Church
- Park (Demuth Park)
- Water park (Knott's Soak City)
- Vehicle storage yard

Indications of potentially hazardous material sources and/or releases were not observed within the visible portions of the properties that adjoined this segment.

Segment 3 – Cathedral City (Channel Confluence to Country Club Drive)

The properties adjoining this segment included:

- River channel
- Residential developments
- Golf courses
- Roadways (Cathedral Canyon Drive, Date Palm Drive, Frank Sinatra Drive, and Country Club Drive)
- A hotel (Welk Resort)
- Business offices
- Self-storage facility
- Equipment yards
- Undeveloped land
- Church
- Commercial shopping centers
- Restaurants
- Automotive dealerships (Mazda, Used Car Mega Store, and Ford)
- Automobile repair shops
- Motel (Motel 6)
- Parks

Indications of potentially hazardous material sources and/or releases were not observed within the visible portions of the properties that adjoined this segment.

Segment 4 – Rancho Mirage (Country Club Drive to Monterey Avenue)

The properties adjoining this segment included:

- Residential developments (single-family dwellings and residential apartments)
- Golf courses
- Fire department
- Real estate office
- Undeveloped land
- River channel
- Public library
- A sports park
- Animal hospital
- Large commercial shopping mall (with theater, restaurants, and retail outlets)
- The Rancho Las Palmas Resort
- Dental offices
- Relatively small commercial shopping areas
- Church
- Roadways (Highway 111, San Jacinto Drive, Rancho Las Palmas, Bob Hope Drive, Parkview Drive, and

Adjoining Property Descriptions
Monterey Avenue) Indications of potentially hazardous material sources and/or releases were not observed within the visible portions of the properties that adjoined this segment.
Segment 5 – Palm Desert (Monterey Avenue to Fred Waring Drive)
The properties adjoining this segment included: - Churches - Residential developments - College campus - River channel - Palm Desert High School - Undeveloped land - Electrical substation - Relatively small commercial shopping areas - Roadways (Monterey Avenue, Magnesia Falls Drive, San Pablo Avenue, Cook Street, Fred Waring Drive) Indications of potentially hazardous material sources and/or releases were not observed within the visible portions of the properties that adjoined this segment.
Segment 6 – Indian Wells (Fred Waring Drive to Washington Street)
The properties adjoining this segment included: - Residential developments - River channel - Golf course - Undeveloped land - Resorts (Hyatt Regency and Renaissance Resort) - Indian Wells Tennis Gardens - Relatively small commercial shopping areas - Roadways (Fred Waring Drive, El Dorado Drive, Highway 111, Miles Avenue, and Washington Street) Indications of potentially hazardous material sources and/or releases were not observed within the visible portions of the properties that adjoined this segment.
Segment 7 – La Quinta/Indio (Washington Street to Coachella Canal)
The properties adjoining this segment included: - River channel - Residential developments (mobile home park and single-family homes) - Commercial properties (including The Home Depot, Kohl's, Stater brothers, restaurants, and banks) - Medical facilities - Self-storage facility - A plant nursery - Aboveground water tank - Canal - La Quinta High School - Undeveloped land - Roadways (Washington Street, Adam Street, Dune Palms Road, Jefferson Street, and Miles Avenue) Indications of potentially hazardous material sources and/or releases were not observed within the visible portions of the properties that adjoined this segment.

Adjoining Property Descriptions

Segment 8 – Indio (Coachella Canal to Van Buren Street)

The properties adjoining this segment included:

- River channel
- Residential developments (single-family homes)
- Fuel service station
- Light industrial/manufacturing (auto body shops, warehouses, and material showrooms)
- Canal
- Roadways (Fred Waring Drive, Indio Boulevard, Monroe Street, Jackson Street, Avenue 44, and Indio Center Drive)
- Undeveloped land

With the exception of a fuel service station, indications of potentially hazardous material sources and/or releases were not observed within the visible portions of the properties that adjoined this segment.

Segment 9 – East Native Lands (Van Buren Street to Tyler Street)

The properties adjoining this segment included:

- River channel
- Sewer treatment facility
- Undeveloped land
- Agricultural land
- Auto salvage yards
- Recycling yard
- Construction/Equipment yards
- One small residential development
- Park

Indications of potentially hazardous material sources and/or releases were not observed within the visible portions of the properties that adjoined this segment.

Segment 10 - Coachella (Tyler Street to Airport Boulevard (Avenue 56))

The properties adjoining this segment included:

- River channel, which is unlined
- Agricultural land
- Residential developments
- Sewer treatment facility
- Undeveloped land
- Recycling yards
- Solar power yard
- Large aboveground water tank
- Apparent manufacturing or food processing facilities
- Construction yards

Indications of potentially hazardous material sources and/or releases were not observed within the visible portions of the properties that adjoined this segment.

4.0 REVIEW OF HISTORICAL PHOTOGRAPHS & MAPS

4.1 Aerial Photographs

Aerial photographs dated between 1948 and 2015 were reviewed in order to assess the route's use over time and to look for evidence of potentially hazardous materials storage, usage, and/or disposal areas within and immediately adjacent to the route. Copies of these photographs are provided in Appendix B. Due to the size of the photographs used (high definition), the best viewing is provided by way of the electronic copy. A summary of these photographs is provided on the table below.

TABLE 5

SUMMARY OF AERIAL PHOTOGRAPHS

Aerial Photograph Date	Aerial Photograph Description
Segment 1 – North Palm Springs (Highway 111 to East Vista Chino)	
1948	*Note that this aerial photograph is relatively grainy.* This segment passes along and adjacent to Highway 111 for about ¾ mile. This highway does not, however, appear to be in its current alignment. The route along the Whitewater River, Sunrise Way, and San Rafael Drive appears in a natural state, covered with soil and sparse vegetation. North Indian Drive crosses this segment, similar to present. With the exception of the two roadways, manmade structures are not visible within or adjacent to this segment.
1954/1955	Similar to 1948. There is no evidence of a levee along the Whitewater River. This segment remains primarily through undeveloped desert lands. Dwellings are now being constructed in the development south of Desert Highland Park (the park is not visible).
1975	A fuel station (currently a visitors center) is now visible adjacent to the beginning of this segment, at the northwest corner of Highway 111 and Tramway Road. The alignment of Highway 111 has changed and is now similar to present. A levee is now visible along this segment between Highway 111 and Gene Autry Trail. Most of the properties that adjoin this segment remain undeveloped desert land. Desert Highland Park is now visible. A golf course and dwellings are now visible along the portion of the route that adjoins San Rafael Drive.
1984	This segment passes through and adjacent to lands that are similar to that observed in 1975. A self-storage facility is now visible north of Vista Chino and immediately west of this segment. Most of the areas adjoining this segment remain undeveloped.
1996	This segment passes through and adjacent to lands that are similar to that observed in 1984. Residential dwellings are now visible along portions of Sunrise Way. A levee is still not visible east of Gene Autry Trail (constructed between 1999 and 2001).
2015	Similar to above. A levee is now visible east of Gene Autry Trail. More residential developments are now visible along this segment.
Summary: With the exception of the fuel station located northwest corner of Highway 111 and Tramway Road, potentially hazardous material sources were not identified within the historical aerial photographs for this segment.	
Segment 2 – Central Palm Springs (East Vista Chino to Tahquitz Creek Confluence)	
1948	*Note that this aerial photograph is relatively grainy.* This segment primarily passes through undeveloped desert land. Ramon Road is visible through the route. An unpaved road also crosses the route south of Diamond Road. No other manmade structures are visible within or adjacent to this segment.
1954/1955	Similar to 1948. Dwellings are now visible southwest of 34th Avenue and this segment.
1975	A residential development is now visible west of this segment and north of Ramon Road. Another development is visible south of 34th Avenue. A golf course is now visible east of this second development. The remaining adjoining areas appear as undeveloped land.

Aerial Photograph Date	Aerial Photograph Description
1984	Similar to 1975. Additional residential developments (including trailer parks) and a golf course are visible in the southern-most portion of this segment, west of Cathedral Canyon Drive.
1996	This segment now appears visible along the top of a levee. The adjoining lands remain in a similar state to that observed in 1984 (undeveloped lands and residential developments).
2015	Similar to 1996. The adjoining properties remain either undeveloped desert lands or in residential use. Dinah Shore Drive now crosses this segment.
Summary: Potentially hazardous material sources were not identified within the historical aerial photographs for this segment.	
Segment 2A – Tahquitz Creek (Belardo Road to Whitewater River Confluence)	
1948	*Note that this aerial photograph is relatively grainy.* In 1948, this segment appears primarily within undeveloped lands. It crosses South Palm Canyon Drive and Sunrise Way, similar to present. No other manmade structures are visible within this segment. The properties adjoining this segment appear undeveloped.
1954/1955	Similar to 1948. Commercial buildings are now visible northwest and northeast of South Palm Canyon Drive and this segment. Single-family dwellings are visible along the north side of North Riverside Drive and west of Sunrise Way. The portion of this segment east of Sunrise Way passes through undeveloped desert land.
1975	More dwellings are visible north of North Riverside Drive. Additional developments are now located south of Mesquite Drive. A sewer treatment facility is visible adjacent to this segment, similar to present. Most of the remaining adjoining properties appear as undeveloped desert land.
1984	This segment passes primarily through undeveloped land and adjacent to dwellings. A residential development and a golf course are now visible north of Mesquite Drive. A new golf course is also visible west of El Cielo Road and this segment. The remaining adjoining areas are similar to that observed in the 1975 aerial photograph.
1996	In 1996, the properties adjoining this segment's route appear similar to that observed during the route reconnaissance. From South Palm Canyon Drive, this segment passes along Tahquitz Creek, roadways, golf courses, and parks. The adjoining properties are in use as residential developments, parks, golf courses, and commercial businesses.
2015	Similar to 1996.
Summary: Potentially hazardous material sources were not identified within the historical aerial photographs for this segment.	
Segment 3 – Cathedral City (Channel Confluence to Country Club Drive)	
1948	*Note that this aerial photograph is relatively grainy.* This segment passes primarily through undeveloped land. A relatively small portion of this segment passes through an orchard in the vicinity of Desert Cove Avenue. Frank Sinatra Drive passes through the route, similar to present. No other manmade structures are visible within this segment. The remaining properties adjoining this segment appear either undeveloped or in agricultural use. The Whitewater River meanders into and out of the route.
1954/1955	Similar to 1948. This segment no longer passes through an orchard. Date Palm Drive now crosses the route. This segment parallels the Whitewater River.
1975	The White Water River is now channelized adjacent to the route, similar to present. This segment passes along the top of portions of this River's right and left banks. It also appears to be established within the Joe Butler Trail. The properties adjoining this segment appear primarily either undeveloped or in use as golf courses or residential developments. A trailer home park is now visible along the southern side of this segment and Frank Sinatra Drive. Another trailer home park is visible on the western side of this segment and Joe Butler Trail. Building structures (apparent dwellings) are now located immediately adjacent to and south of Officer David Vasquez Road.
1984	Similar to 1975. There has been an increase in commercial-size buildings south of this segment, between Cathedral Canyon Drive and Date Palm Drive.

Aerial Photograph Date	Aerial Photograph Description
1996	This segment is appears to be passing through lands of a similar nature as observed in 1984. Except for the river channel, almost all of the lands located adjacent to this segment have been developed for commercial, residential, or recreational use. A golf course is now visible along a portion of this segment, north of Country Club Drive.
2015	Similar to 1996.
Summary: Potentially hazardous material sources were not identified within the historical aerial photographs for this segment.	
Segment 4 – Rancho Mirage (Country Club Drive to Monterey Avenue)	
1948	*Note that this aerial photograph is relatively grainy.* This segment passes primarily through undeveloped land. The Whitewater River meanders into and out of the route. Highway 111, San Jacinto Drive, and Parkview Drive are visible on this photograph. Relatively small dwelling-size building structures are scattered in the properties that adjoin this segment.
1954/1955	Similar to 1948. This segment passes through undeveloped lands and along the sides of paved roadways (Highway 111, Bob Hope Drive, and Parkview Drive). A relatively large golf course is now visible south of Country Club Drive and east of Highway 111. Most of the adjoining lands remain undeveloped and sparsely populated with small building structures.
1975	The Whitewater River now appears channelized adjacent to a portion of this segment, similar to present. There is a greater number of dwellings and commercial buildings located east and west of Bob Hope Drive, as well as north and south of Parkview Drive.
1984	This segment passes through terrain similar to that observed in the 1975 aerial photograph. A residential development southwest of Country Club Drive and Highway 111 has expanded and now adjoins this segment. Similar to 1975, the number of dwellings and commercial buildings has increased adjacent to this segment in the vicinity of Bob Hope Drive and Park View Drive.
1996	Similar to 1984. With the exception of more dwellings adjacent to Parkview Drive, the properties adjoining this segment appear similar to that observed in the 1984 photograph.
2015	Similar to 1996. More dwellings and a church are visible along Parkview Drive.
Summary: Potentially hazardous material sources were not identified within the historical aerial photographs for this segment.	
Segment 5 – Palm Desert (Monterey Avenue to Fred Waring Drive)	
1948	In the 1948 aerial photograph, this segment passes primarily through undeveloped properties. The Whitewater River meanders through this segment. A portion of this segment passes through agricultural lands (orchards).
1954	Similar to 1948.
1975	The College of the Desert campus is now visible in the western portion of this segment. Magnesia Falls Drive is now visible along the side of the route. Trailer parks are visible north and south of Magnesia Falls Drive. An orchard remains visible on the southern side of the route, east and west of Deep Canyon Road. The Whitewater River is now channelized along the northern sides of this segment.
1984	Similar to 1975. The trailer home parks have expanded in the vicinity of Magnesia Falls Drive. An orchard remains visible adjacent to the route and Deep Canyon Road.
1996	The College of the Desert campus has expanded to the east, similar to present. Agricultural lands are no longer visible within the route. The Palm Desert High School is now visible immediately southwest of Cook Street and the Whitewater River Channel. The vacant land southeast of this intersection now contains a residential development.
2015	Similar to 1996.
Summary: Potentially hazardous material sources were not identified within the historical aerial photographs for this segment.	
Segment 6 – Indian Wells (Fred Waring Drive to Washington Street)	

Aerial Photograph Date	Aerial Photograph Description
1948	This segment passes through undeveloped desert land and agricultural properties that appear in use as orchards or vineyards. The Whitewater River meanders through the portions of this segment. Relatively small dwelling-size buildings are visible within the route vicinity. A portion of this segment passes along the eastern side of El Dorado Drive (a farm road in 1948) and the northern side of Highway 111 (a paved roadway).
1954	Similar to 1948.
1975	This segment now appears to traverse through undeveloped properties; primarily along the top of the banks of the Whitewater River Channel (the Whitewater River is now channelized). Agricultural lands are no longer visible within or adjacent to the route. Fred Waring Drive now crosses this segment. Most of the properties adjoining this segment are vacant.
1984	Similar to 1975. The route passes primarily through or adjacent to undeveloped properties.
1996	The route now appears to pass along the side of roadways, through resorts, along the sides of golf courses, and along the upper banks of the Whitewater River Channel. The adjoining lands appear occupied by residential developments, resorts, golf courses, and vacant lands.
2015	Similar to 1996. More dwellings are visible within the route vicinity.
Summary: Potentially hazardous material sources were not identified within the historical aerial photographs for this segment.	
Segment 7 – La Quinta/Indio (Washington Street to Coachella Canal)	
1948	This segment passes through undeveloped desert lands between Washington Street and Jefferson Street. It passes through and adjacent to agricultural lands between Jefferson Street and the Coachella Canal. Washington Street is the only visible roadway that crosses this segment. The Coachella Canal is also visible. The Whitewater River meanders across the planned path of this segment between at least Washington Street and 46th Avenue. A levee is visible along the right bank of this river between 46th Avenue and the Coachella Canal. Relatively small dwelling-size buildings are scattered throughout the route vicinity.
1954	Similar to 1948. Dune Palm Drive and Miles Drive are now visible within this segment
1975	This segment now appears to traverse through undeveloped properties; primarily along the top of the banks of the Coachella Valley Stormwater Channel (the Whitewater River now is channelized). Jefferson Street now passes through this segment. More dwellings are visible east of Date Palm Drive.
1984	Similar to 1975. Residential developments are being constructed adjacent to this segments eastern portion, south of Miles Avenue.
1996	The area within and adjoining this segment remains in a similar state to that observed in 1984. A commercial shopping center is now visible southeast of the Coachella Valley Stormwater Channel and Washington Street. The La Quinta High School and more residential developments are now visible east of Adams Street and north of this segment. Residential developments now occupy almost all of the land immediately east of this segment between Highway 111 and the Coachella Canal. The remaining adjoining properties are undeveloped.
2015	Similar to 1996. More residential developments and commercial shopping centers have been constructed north and south of the route between Washington Street and Jefferson Street.
Summary: Potentially hazardous material sources were not identified within the historical aerial photographs for this segment.	
Segment 8 – Indio (Coachella Canal to Van Buren Street)	
1948	Most of this segment appears to be on a levee along the top right bank of the Coachella Valley Stormwater Channel, similar to present. The adjoining properties are either undeveloped (including the channel bed) or in use as agricultural fields. Indio Boulevard, a railroad, Monroe Street, Jackson Street, and other roadways pass through the route.
1954	Partial coverage. Similar to 1948.
1975	The agricultural properties previously observed east and south of this segment have been partially replaced with residential developments. Jackson Park is now visible adjacent to this

Aerial Photograph Date	Aerial Photograph Description
	segment.
1984	Similar to 1975. More residential developments are visible adjacent to the route. Some of the properties located west-southwest of Monroe Street and the river have been developed for light industrial or manufacturing use (similar to present).
1996	Similar to 1984. More residential developments are visible east of the route and south of Indio Boulevard.
2015	Similar to 1996.
Summary: Potentially hazardous material sources were not identified within the historical aerial photographs for this segment.	
Segment 9 – East Native Lands (Van Buren Street to Tyler Street)	
1948	This segment primarily passes through undeveloped lands. The Whitewater River is not channelized within this segment. It meanders across and away from the route through undeveloped lands. Some agricultural properties adjoin the western side of this segment. Relatively small dwelling-size buildings are scattered throughout the route vicinity. Dillon Road and Avenue 50 cross the route.
1954	No coverage.
1975	This segment is now located mostly along the top right bank of the Coachella Valley Stormwater Channel, similar to present. A spur of this segment enters into agricultural lands. Most of the properties located immediately west of this segment are now in agricultural use.
1984	The properties adjoining this segment remain primarily in agricultural use or in an undeveloped state. Some of the properties located immediately south of Golf Center Parkway and west of this segment are now in light industrial or manufacturing use. Wastewater treatment ponds are visible adjacent to a part of this segment that leaves the river bank (next to Van Buren Street).
1996	The route remains visible along the top right bank of the Coachella Valley Stormwater Channel. Most of the agricultural lands formerly adjoining the route appear fallow. Equipment yards are now visible immediately west of the route and south of Avenue 48.
2015	Similar to 1996. Residential dwellings and a park are now visible immediately northwest of this segment and Avenue 50.
Summary: Potentially hazardous material sources were not identified within the historical aerial photographs for this segment.	
Segment 10 – Coachella (Tyler Street to Airport Boulevard (Avenue 56))	
1948	This segment passes primarily through undeveloped lands. The Whitewater River does not appear channelized within this segment. It meanders within an area that is similar to the existing drainage course. Most of the properties that adjoin the route are in undeveloped and vacant states, covered with soil and sparse vegetation. Some agricultural properties adjoin the western side of this segment. Relatively small dwelling-size buildings are scattered throughout the route vicinity.
1954	No coverage.
1975	This segment is now located mostly along the top the right bank of the Coachella Valley Stormwater Channel, similar to present. Most of the properties located west of this segment are in agricultural use. The Sierra Vista residential community is now visible between the route and Tyler Street.
1984	Similar to 1975. There are a few more commercial-size buildings immediately west of this segment's southern portion.
1996	This segment remains visible along the top right bank of the Coachella Valley Stormwater Channel. The properties adjoining the western side of this segment are primarily in agricultural use or fallow. A residential development is now visible northwest of this segment and Avenue 52. A wastewater treatment facility is now visible southwest of Avenue 54 and this segment. Equipment storage yards are visible northwest of this intersection. More buildings are visible immediately west of this segment's southern portion.

Aerial Photograph Date	Aerial Photograph Description
2015	Similar to 1996. A solar array is now visible south of the wastewater treatment ponds and Avenue 54.
Summary: Potentially hazardous material sources were not identified within the historical aerial photographs for this segment.	

With the exception of the fuel service station formerly located northwest of Highway 111 and Tram Way, indications of potential contaminant sources, such as landfills, large aboveground tanks, oil wells, or pipelines were not visible onsite or within the immediate route vicinity. As noted in Section 6.1.1, gasoline was released at the former fuel station located northwest of Highway 111 and Tram Way, but was cleaned to the satisfaction of regulatory agencies (Case closed in 1998).

4.2 USGS Topographic Maps

Topographic maps covering the route and vicinity were reviewed as part of this assessment. These maps are provided in Appendix C of this report. A summary of conditions shown along the each segment of the route is provided on the table below.

TABLE 6

SUMMARY OF TOPOGRAPHIC MAPS

Topographic Map	Description
Segment 1 – North Palm Springs (Highway 111 to East Vista Chino)	
1944 Palm Springs	In the 1944 topographic map, this segment appears to pass through undeveloped lands. Highway 111 is located along a portion of this segment. Its route is dissimilar to present. Besides Highway 111, Indian Canyon Drive is the only manmade structure shown within or immediately adjacent through this segment.
1957 Palm Springs	Similar to above.
1972 Palm Springs	This segment is now parallel and adjacent to Highway 111. East of Highway 111, it travels along a levee to Indian Canyon Trail. A south-trending spur to this segment is now shown travelling into Desert Highland Park. The remaining portions of this segment appear to cross through undeveloped land. A fuel station (currently the Palm Springs Visitor Center) is shown adjacent to the beginning of this segment, adjacent to Highway 111. This segment is adjoined by vacant land, a residential development, roadways, and a golf course.
1980 Palm Springs	Similar to 1972. A self-storage facility is now shown adjacent to the route near Gene Autry Trail.
1988 Palm Springs	Similar to 1980. The eastern portion of this segment (west of Gene Autry Trail) is now shown on a levee.
1996 Palm Springs	Similar to 1988.
Summary: With the exception of a fuel service station, potentially hazardous material sources were not identified within the historical topographic maps for this segment. As noted in Section 3.2.1 of this report, soil at this former fuel station had been impacted, but was properly remediated.	
Segment 2 – Central Palm Springs (East Vista Chino to Tahquitz Creek Confluence)	
1904 Indio	The segment is shown within or immediately adjacent to Whitewater River. No manmade features are shown within or adjacent to this segment.
1941	Similar to 1904.

Topographic Map	Description
Edom	
1958 Cathedral City	This segment remains shown within the Whitewater River. The adjoining areas appear primarily undeveloped. A residential development is shown west of this segment and north of Ramon Road, as well as west of this segment and south of 34th Avenue.
1972 Cathedral City	This segment is now shown on a levee on the right bank of the Whitewater River Channel, north of Ramon Road. A portion of the route is also shown on a levee south of 34th Avenue. This segment is adjoined by vacant land, a residential development, roadways, and a drive-in theater.
1981 Cathedral City	Similar to 1972.
Segment 2 Summary: Potentially hazardous material sources were not identified within the historical topographic maps for this segment.	
Segment 2A – Tahquitz Creek (Belardo Road to Whitewater River Confluence)	
1904 Indio	This segment is shown within or immediately adjacent to Tahquitz Creek. No manmade features are shown within or adjacent to this segment.
1944 Palm Springs	Similar to above, this segment is shown within or immediately adjacent to Tahquitz Creek. Most of the adjoining areas appear undeveloped. Some relatively small building structures are shown immediately northwest of South Palm Canyon Drive and Tahquitz creek. With the exception of roadways, no other manmade structures are shown adjoining the route.
1957 Palm Springs	Tahquitz creek now appears channelized between Palm Canyon Drive and Sunrise Way. This segment's route travels along the northern side of this channel, along the southern side of North Riverside Drive. The remaining portions of this segment appear to traverse through undeveloped land. The areas located north and south of this channel are shaded red, indicating that they have been developed. Manmade structures, except roadways, are not shown adjacent to the remaining portions of this segment.
1958 Cathedral City	This segment appears to pass primarily through undeveloped land. A portion now travels along 34th Avenue. A sewage treatment plant is shown north of this segment, west of Gene Autry Trail (similar to present). With the exception of roadways, manmade structures are not shown adjacent to this segment.
1972 Palm Springs	Similar to that depicted on the 1957 topographic map. A portion of this segment now travels along Mesquite Avenue. Three commercial buildings are now shown northwest of this segment and South Palm Canyon Drive. One of these structures was formerly a dry cleaning facility that spilled a significant quantity of dry cleaning solvents (see Section 6.1.1). Additional residential developments are now shown south of this segment and Mesquite Avenue.
1972 Cathedral City	This section is now shown along a portion of Crossly Road/Golf Club Drive. Residential apartments are now shown east of this segment and Golf Club Drive. A trailer park (currently Cathedral Palms RV Resort) is shown adjacent to this segment and Cathedral Canyon Drive.
1980 Palm Springs	El Cielo Road and an extension of Mesquite Avenue are now shown adjacent to this segment. Additional residential developments are shown south of the route and Mesquite Avenue, and north of the route and east of El Cielo Road.
1981 Cathedral City	The portions of this segment that adjoin Golf Course Drive and Kirkwood Drive have been developed for residential use. A drive-in theater is now shown south of this segment and east of Kirkwood Drive.
1988 Palm Springs	Similar to the 1980 Palm Springs topographic Map
1996 Palm Springs	Similar to the 1988 Palm Springs topographic Map. Golf courses are now shown adjacent to this segment and El Cielo Road.
Summary: With the exception of a dry cleaning facility, potentially hazardous material sources were not identified within the historical topographic maps for this segment. As noted in Section 6.1.1 of this report, soil and groundwater underlying the dry cleaners are in the process of being remediated.	
Segment 3 – Cathedral City (Channel Confluence to Country Club Drive)	

Topographic Map	Description
1904 Indio	This segment is shown within or immediately adjacent to the Whitewater River. It passes next to and across Highway 111. Besides Highway 111, there are no other manmade features shown within or adjacent to this segment.
1958 Cathedral City	With the exception of the river and roadways, the uses of the properties that include or adjoin this segment are not shown. The Whitewater River is located along portions of this segment. This segment now passes adjacent to or across Highway 111, Date Palm Drive, Wonder Palms Drive (Frank Sinatra Drive), and Country Club Drive. Relatively small building structures and a water tank also adjoin this segment.
1972 Cathedral City	The route is now shown along the top of the right bank of the Whitewater River, which is now appears partially channelized. Commercial-size buildings are shown south of this segment and east of Cathedral Canyon Drive. Relatively large trailer parks are shown adjacent to this segment west of Cathedral Canyon Drive, south of Officer David Vasquez Road, and south of Frank Sinatra Drive.
1981 Cathedral City	This segment remains in a similar setting to that observed on the 1972 map. More commercial-size buildings are shown south of the route, east and west of Cathedral Canyon Drive. Buildings for a shopping center are also now shown south of the route and east of Date Palm Drive.
Summary: Potentially hazardous material sources were not identified within the historical topographic maps for this segment.	
Segment 4 – Rancho Mirage (Country Club Drive to Monterey Avenue)	
1904 Indio	This segment is shown passing next to or across Highway 111 and/or the Whitewater River. Note that the alignment of Highway 111 is dissimilar to its existing alignment. No other manmade structures are shown adjacent to this segment on this map.
1944 Toro Peak	This segment passes next to San Jacinto Drive, Rancho Las Palmas Drive, Bob Hope Drive (formerly Rio Del Sol), and Highway 111. Building structures are shown adjacent to these roadways. There are no manmade structures adjacent to this segment east of Highway 111.
1958 Cathedral City	This segment is shown along the southern side of Highway 111. A residential development is now shown immediately south of this segment. A golf course (Thunderbird Country Club) is shown north of this segment and Highway 111.
1972 Cathedral City	Similar to 1958. Additional dwellings are shown north and south of this segment.
1981 Cathedral City	Similar to 1972.
1957 Rancho Mirage	This segment is shown partly within the Whitewater River. The river meanders in and out of the route. This segment then passes along San Jacinto Drive, Bob Hope Drive, Highway 111, and Parkview Drive. More building structures (currently residential apartments and shopping centers) are shown west of Bob Hope Drive. Scattered building structures are shown adjacent to Parkview Drive and this segment. A well is shown next to this segment's eastern end.
1972 Rancho Mirage	The route is shown along the upper right bank of the Whitewater River, which is now channelized. The remaining areas adjoining this segment are in a similar state to that shown on the 1957 topographic map. Additional building structures are shown adjacent to this segment.
1981 Rancho Mirage	The areas adjoining this segment are in a similar state to that shown on the 1972 topographic map. Additional building structures are shown adjacent to this segment.
1996 Rancho Mirage	Similar to 1981. Additional building structures are shown adjacent to this segment.
Summary: Potentially hazardous material sources were not identified within the historical topographic maps for this segment.	
Segment 5 – Palm Desert (Monterey Avenue to Fred Waring Drive)	
1904 Indio	In 1904, this segment crosses a roadway in its eastern and western portions. No other manmade structures are shown within the vicinity of this section on this map.
1944 Toro Peak	This segment appears to pass through undeveloped land and then a portion of the Whitewater River, which is not channelized. Manmade structures are generally not shown within the

Topographic Map	Description
	vicinity of this segment. Three unpaved roadways are shown south of this segment. The roadway observed in the 1904 topographic map is now shown further to the south.
1957 Rancho Mirage	The western portion of this segment passes through orchards and/or vineyards. Unpaved roadways, groundwater wells, and small building structures are shown scattered in the areas adjoining this segment.
1972 Rancho Mirage	The western portion of this segment now passes through The College of the Desert. An orchard and/or vineyard remain shown in this area. West of Portola Avenue, trailer parks have replaced the orchard north and south of this segment.
1981 Rancho Mirage	Similar to 1972.
1996 Rancho Mirage	The school and mobile home parks are in a similar state to that shown on the 1981 topographic map. A golf course adjoined by residential dwellings is now visible north of this segment and east of Monterey Avenue. Magnesia Falls Drive is now shown along a portion of this segment.
1959 La Quinta	This segment passes through or immediately adjacent to three orchards. The Whitewater River meanders un-channelized through and away from the route. With the exception of a groundwater well, there are no structures shown immediately adjacent to the route on this map.
1972 La Quinta	This segment is now shown within and along the upper banks of the Whitewater River Channel, similar to present. One of the adjoining orchards has been removed from the route. An orchard is now located west of Portola Avenue.
1980 La Quinta	The Palm Desert Community Park and at least one school are now located southeast of this segment and Magnesia Falls Drive. A residential development is located immediately east of the park and school. An orchard and undeveloped land remain shown in the eastern portion of this segment.
Summary: Potentially hazardous material sources were not identified within the historical topographic maps for this segment.	
Segment 6 – Indian Wells (Fred Waring Drive to Washington Street)	
1904 Indio	In 1904, this segment crosses a roadway and the Whitewater River in several areas. With the exception of the roadway, manmade structures are not shown within the vicinity of this segment.
1959 La Quinta	This segment is adjoined by orchards and/or vineyards, the Whitewater River, groundwater wells, roadways (Highway 111 and Avenue 45), and scattered building structures. The Whitewater River remains un-channelized and meandering.
1972 La Quinta	This segment is now shown partly along the top banks of the Whitewater River, which has been channelized (similar to present). The remaining areas adjoining this segment are in a similar state to that shown on the 1959 topographic map. Fewer scattered building structures are shown within the vicinity of this segment.
1980 La Quinta	Similar to 1972.
Summary: Potentially hazardous material sources were not identified within the historical topographic maps for this segment.	
Segment 7 – La Quinta/Indio (Washington Street to Coachella Canal)	
1904 Indio	In 1904, this segment crosses a roadway in two areas. With the exception of the roadway, manmade structures are not shown within the vicinity of this segment on this map.
1959 La Quinta	This segment generally follows the Whitewater River, which meanders into and away from this segment. It crosses Dune Palms Road and Avenue 45 (Miles Avenue). Some scattered dwelling-size building structures are shown adjacent to Dune Palms Road. The route is shown along a levee in this segment's eastern portion, east of Jefferson Street. No other manmade structures are shown within the route vicinity. Orchards and/or vineyards are shown adjacent to portions of this segment.
1972 La Quinta	This segment is now shown partly along the top right bank of the Whitewater River, which has been channelized (similar to present). Jefferson Street is now shown within this segment. There are more dwelling-size structures between Dune Palms Road and Jefferson Street.

Topographic Map	Description
1980 La Quinta	The areas adjoining this segment are in a similar state to that shown on the 1972 topographic map. There are more dwelling-size structures north of this segment in the vicinity of Jefferson Street.
Segment 7 Summary: Potentially hazardous material sources were not identified within the historical topographic maps for this segment.	
Segment 8 – Indio (Coachella Canal to Van Buren Street)	
1904 Indio	With the exception of the Southern Pacific Railroad, the uses of the route and adjoining properties are not shown on this map. Only the western half of this segment is shown.
1947 Coachella	This segment is shown along the top of the right bank of the Whitewater River, similar to present. Manmade structures that are located adjacent to or within this segment include roadways, a railroad, and relatively small building structures.
1956 Indio	Orchards are shown adjacent to the western portion of this segment. Relatively small buildings are shown scattered in these orchards, as well as the remaining adjoining properties. The Andrew Jackson Elementary School is shown adjacent to this segment's eastern portion.
1972 Indio	Orchards are no longer shown adjoining this segment. Residential developments are now shown adjoining most of this segment's eastern portion.
Summary: Potentially hazardous material sources were not identified within the historical topographic maps for this segment.	
Segment 9 – East Native Lands (Van Buren Street to Tyler Street)	
1947 Coachella	This segment is shown within and adjacent to the Whitewater River. This river appears to meander un-channelized along a portion of this segment. This segment crosses Dillon Road, Avenue 48, and Avenue 50. No other manmade structures are shown within or immediately adjacent to this segment.
1956 Indio	Similar to the 1947 map. An unpaved roadway is now shown paralleling (meandering with) the Whitewater River. With the exception of this unpaved roadway, Dillon Road, Avenue 48, and Avenue 50, manmade structures are not shown within or immediately adjacent to the route. Heavy vegetation or an orchard is shown immediately northwest of this segment and Avenue 50.
1972 Indio	Heavy vegetation or an orchard is no longer shown immediately northwest of this segment and Avenue 50. The Whitewater River remains un-channelized.
Summary: Potentially hazardous material sources were not identified within the historical topographic maps for this segment.	
Segment 10 – Coachella (Tyler Street to Airport Boulevard (Avenue 56))	
1947 Coachella	This segment is shown along the western side of the Whitewater River. An unpaved roadway parallels most of this segment. No other manmade structures are shown adjacent to this segment.
1956 Indio	This segment passes along the right side of the Whitewater River. It is shown on a levee south of Avenue 52. The river is shown as having been channelized along this segment. An unpaved roadway is shown paralleling a portion of this segment. Other roadways that cross the route include Avenue 52, Avenue 54, and Avenue 56 (Airport Boulevard). No other manmade structures are shown within or immediately adjacent to the route.
1972 Indio	Similar to that shown in 1956. A relatively small residential development is shown west of this segment's northern portion, between Avenue 50 and Avenue 52. Scattered small buildings are also shown in this area. Manmade structures shown south of Avenue 52 include ponds and dwelling-size buildings. Two aboveground storage tanks are shown southwest of Avenue 54 and this segment, and two additional aboveground tanks are shown between Avenue 54 and Avenue 56. The two tanks adjoining Avenue 54 are currently in use as part of a sewage treatment facility. The other tanks appear to have been in use for water storage (one water tank remains in this area).
Summary: Potentially hazardous material sources were not identified within the historical topographic maps for this segment.	

4.3 Oil and Gas Maps

Oil well maps provided by the California Division of Oil, Gas, and Geothermal Resources (CDOGGR) were searched via their search program at http://maps.conservation.ca.gov/doms/index.html. Based on a review of the maps provided by CDOGGR, there are no oil wells located within 1 mile of the route. Due to the absence of oil wells within the route vicinity, potentially hazardous material sources and/or releases related to them are not anticipated to impact the soil and/or groundwater underlying the route.

5.0 AERIALLY DEPOSITED LEAD INVESTIGATION

Relatively elevated lead concentrations (higher than background levels) are generally anticipated within near-surface soils adjacent to historic roadways as a result of aerially deposited lead (ADL). This is the result of the emissions from historic vehicles that used leaded gasoline. The phasing out of leaded gasoline began in 1973, and has been banned in California since 1992. Relatively elevated lead concentrations have persisted in the near-surface soils since this time.

5.1 Soil Sampling Locations and Depths

An ADL survey was conducted adjacent to the major roadways that the CV Link's route passes across or under. These roadways, 30 total, are included on Table 7 provided below in Section 5.3. Note that three of these roadways (Ramon Road, South Palm Canyon Drive, and Cathedral Canyon Drive) were previously tested by TNPR at or near the planned route (TNPR, 2001, 2013, and 2015).

Soil samples were primarily collected from the onsite roadways on July 10, July 24, and August 8, 2015. As noted on the table below, it included the collection of soil samples from 54 locations (S-1 through S-54). Six additional locations were previously sampled by TNPR. The sampling areas were located along the route's alignment on each side of the roadways listed on Table 7. The soil sampling locations are shown on the Map Pages 1 through 69. Soil samples were collected from each of these locations between the soil surface and a depth of 6 inches. This shallow depth typically has the highest lead concentrations. It is also considered most likely to be disturbed during construction activities along the CV Link route.

5.2 Soil Sampling Procedures

A clean hand trowel was used to collect the soil samples at each location. The soil samples were poured directly from the hand trowel into new and unused laboratory-supplied glass jars. The filled glass jars were immediately capped, labeled, and placed into an ice chest for temporary storage.

A California-licensed professional geologist collected each soil sample. The soil borings were not logged as part of this investigation. Note, however, that physical evidence of potentially hazardous materials (as indicated by staining and/or odor) was not encountered at any of the soil sampling locations.

5.3 Laboratory Analyses of Soil Samples

Following the completion of sampling, the soil samples were transported to a State-accredited laboratory (Test America) for chemical analyses. Each collected soil sample (54 total) was analyzed for total lead using EPA Method 6010B. The sample with the highest lead concentration (B-19) was also analyzed for soluble lead. A copy of the laboratory report is presented as Appendix D. A summary of these results is provided on the following table.

TABLE 7

SUMMARY OF LEAD CONCENTRATIONS IN SOIL ADJACENT TO ROADWAYS

Roadways Adjoining the CV Link Route	Period Roadway was Constructed Through Site	Sample ID & Location	Sampling Date	Lead Concentration (mg/kg)
Highway 111 adjacent to the site's western-most portion	Before 1944	S-1 (west side) S-2 (east side)	07-10-15	13 22
North Indian Canyon Drive	Before 1944	S-3 (west side) S-4 (east side)	07-10-15	3.7 3.5
Gene Autry Trail (north)	1955-1972	S-5(west side) S-6 (east side)	07-10-15	3.0 3.2
Gene Autry Trail (south)	1955-1972	S-9 (east side) S-10(west side)	07-10-15	5.8 5.5
Vista Chino	1957-1972	S-7 (north side) S-8 (south side)	07-10-15	5.6 2.4
Ramon Road* (TNPR, 2015)	Before 1941	*S-19** (north side) *S-6** (south side)	02-03-13	19.3 6.57
South Palm Canyon Drive* (TNPR, 2015)	Before 1944	*S-1** (west side) *S-4** (east side)	04-17-15	5.39 <0.5
Sunrise Way	Before 1944	S-13 (east side) S-14 (west side)	07-10-15	14 5.3
El Cielo Road	Before 1944	S-11 (west side) S-12 (east side)	07-10-15	12 8.8
Cathedral Canyon Drive* (TNPR, 2011)	1958-1972	*S-12** (west side) *S-7** (east side)	01-09-11	22.3 18.2
Date Palm Drive	Before 1948	S-15 (west) S-16 (east)	07-24-15	7.4 22
Frank Sinatra Drive	Before 1941	S-17 (north) S-18 (south)	07-24-15	3.7 7.1
Country Club Drive	1941-1958	S-19 (north) S-20 (south)	07-24-15	67 (soluble = 3.5 mg/l) 8.3
Highway 111 at Paxton Drive	Before 1904	S-21 (south) S-22 (north)	07-24-15	26 4.3
Bob Hope Drive	Before 1948	S-23 (west) S-24 (east)	07-24-15	8.5 13
Monterey Avenue	Before 1948	S-25 (west) S-26 (east)	07-24-15	4.9 3.4
Cook Street	1957-1972	S-27 (west) S-28 (east)	07-24-15	6.4 6.9
Fred Warring Drive (west)	1948-1959	S-29 (north) S-30 (south)	07-24-15	8.6 5.1
Washington Street	Before 1948	S-31 (west) S-32 (east)	08-08-15	4.9 15
Dune Palms Drive	1948-1958	S-33 (west) S-34 (east)	08-08-15	3.8 3.8

Roadways Adjoining the CV Link Route	Period Roadway was Constructed Through Site	Sample ID & Location	Sampling Date	Lead Concentration (mg/kg)
Jefferson Street	1959-1972	S-35 (west) S-36 (east)	08-08-15	3.7 3.8
Miles Avenue	1948-1959	S-37 (south) S-38 (north)	08-08-15	4.4 6.8
Fred Warring Drive (east)	1948-1956	S-39 (south) S-40 (north)	08-08-15	5.4 4.5
Indio Boulevard	Before 1947	S-41 (south) S-42 (north)	08-08-15	5.9 5.8
Monroe Street	Before 1947	S-43 (west) S-44 (east)	08-08-15	20 8.8
Jackson Street	Before 1947	S-45 (west) S-46 (east)	08-08-15	4.0 13
Indio Center Drive	1956-1972	S-47 (north) S-48 (south)	08-08-15	7.4 8.3
Dillon Road	Before 1947	S-49 (north) S-50 (south)	08-08-15	3.9 6.4
Avenue 50	Before 1948	S-51 (north) S-52 (south)	08-08-15	5.6 8.9
Avenue 52	Before 1948	S-53 (north) S-54 (south)	08-08-15	2.7 6.0

Notes: mg/kg milligrams per kilogram
* Previously sampled by TNPR

The following findings are based on the results of the chemical analyses provided above.

- Lead was detected in 59 of the 60 soil samples collected adjacent to roadways along the CV Link route. The lead concentrations typically ranged between 2 and 22.3 milligrams per kilogram (mg/kg). One of the collected soil samples was reported with a lead concentration of 67 mg/kg.
- All of the reported lead concentrations were well below lead's California Human Health Screening Level for residential properties (80 mg/kg) and commercial properties (320 mg/kg) (Cal-EPA, 2009). As such, the soils adjoining the onsite roadways are not considered a potential threat to human health. Note that the lead concentrations in soil along the CV Link route are anticipated to decrease with distance away from these older roadways.
- The soil sample reported with a lead concentration of 67 mg/kg (S-19 at Country Club Drive) was reported with a soluble lead concentration of 3.50 milligrams per liter. The pH of that soil was reported to be 7.75.

5.4 Summary of ADL Investigation

Soils along the CV Link route are not considered potentially hazardous to health based on current screening levels. As noted above, the soil within the project route can be handled as a non-hazardous material. It can be reused as construction fill.

6.0 REVIEW OF REGULATORY DOCUMENTS

6.1 Local Regulatory Agencies

6.1.1 REGIONAL WATER QUALITY CONTROL BOARD

Records from the Regional Water Quality Control Board (RWQCB) were searched via their online search program at http://geotracker.swrcb.ca.gov. The properties listed in their database are known to have released potentially hazardous materials into the underlying soil and/or groundwater. A search of this database revealed 22 properties within the route vicinity (within 1/8 mile) currently or formerly regulated by the RWQCB as a result of hazardous material releases. A summary of these properties and the related contaminant releases is provided on the table below.

TABLE 8

SUMMARY OF RWQCB RECORDS

Property Name & Address	Comments
Segment 1 – North Palm Springs (Highway 111 to East Vista Chino)	
Palm Springs Oil #5 2901 N. Palm Canyon Dr., Palm Springs, CA	- Located immediately adjacent to the travelway. - Currently in use as the Palm Springs Visitors Center. - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 05/15/1998.
Segment 2 – Central Palm Springs (East Vista Chino to Tahquitz Creek Confluence)	
No cases listed within 1/8 mile of this segment.	
Segment 2A – Tahquitz Creek (Belardo Road to Whitewater River Confluence)	
Meader's Cleaners 711 Palm Canyon Dr., Palm Springs, CA	- Located immediately adjacent to travelway (currently a KFC). - Tetrachloroethene was released into the soil and groundwater beneath this property. - The groundwater from this facility has migrated beneath the route (See Figures 15 and 16, and groundwater monitoring report provided in Appendix E). - PCE-impacted groundwater underlies the route at depths between 215 and 244 feet. - This release is currently being remediated and monitored.
Mobil #18 E1H 694 S. Palm Canyon Dr., Palm Springs, CA	- Located approximately 330 feet from travelway (currently a Jack in the Box). - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 03/20/1996.
Mr. Meat 681 S. Palm Canyon Dr., Palm Springs, CA	- Located approximately 330 feet from travelway (currently part of Rocky's Pawn Shop). - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 08/25/1992.
Palm Springs Oil #8 670 S. Palm Canyon Dr. Palm Springs, CA	- Located approximately 510 feet from travelway (currently a 76 fuel service station). - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 03/17/2000.
Venita Brudvik Property 551 Industrial Pl., Palm Springs, CA	- Located approximately 40 feet from travelway. - Diesel was released into the underlying soil. This soil has been remediated. - Case closed 03/20/1996.
Mesquite Country Club 2700 Mesquite Ave., Palm Springs, CA	- Located between 150 and 200 feet from travelway. - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 10/21/1999.

Property Name & Address	Comments
Segment 3 – Cathedral City (Channel Confluence to Country Club Drive)	
Cathedral Canyon Country Club 68311 Paseo Real, Cathedral City, CA	- Located between 150 and 250 feet from travelway. - Diesel was released into the underlying soil. This soil has been remediated. - Case closed 02/02/1987.
Coca Cola Enterprises West 68600 Perez Rd., Cathedral City, CA	- Located between 600 and 700 feet from travelway. - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 07/24/1992.
Familian Pipe & Supply 36283 Plaza Dr. Cathedral City, CA	- Located between 550 and 650 feet from travelway. - Diesel was released into the underlying soil. This soil has been remediated. - Case closed 08/24/1992.
Palm Springs Ford Motors 69200 Highway 111, Cathedral City, CA	- Located between 150 and 400 feet from travelway. - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 09/06/1994.
Rancho Mirage Hand Wash 69800 Highway 111, Rancho Mirage, CA	- Located between 450 and 500 feet from travelway. - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 10/15/2007.
Segment 4 – Rancho Mirage (Country Club Drive to Monterey Avenue)	
Elephant Car Wash 71490 Highway 111, Rancho Mirage, CA	- Located between 280 and 400 feet from travelway. - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 09/17/1999.
Texaco Station 71689 Highway 111, Rancho Mirage, CA	- Located 600 and 700 feet from travelway. - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 03/20/1996.
Segment 5 – Palm Desert (Monterey Avenue to Fred Waring Drive)	
Portola Country Club 42500 Portola Ave., Palm Desert, CA	- Located between 470 and 650 feet from travelway. - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 02/20/2002.
Segment 6 – Indian Wells (Fred Waring Drive to Washington Street)	
City of Indian Wells Maintenance 44900 El Dorado Dr., Indian Wells, CA	- Located between 50 and 250 feet from travelway. - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 04/21/1997.
Segment 7 – La Quinta/Indio (Washington Street to Coachella Canal)	
ARCO AM/PM #5898 46150 Washington St. La Quinta, CA	- Located about 90 feet from southern travelway. - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 10/10/2003.
Segment 8 - Indio (Coachella Canal to Van Buren Street)	
Unocal #6351 43401 Monroe St., Indio, CA	- Located about 50 feet from southern travelway. - Gasoline was released into the underlying soil. This soil has been remediated. - Case closed 07/05/2002.
Shell Service Station 43411 Monroe St., Indio, CA	- Located between 220 and 250 feet from travelway. - Gasoline was released into the underlying soil and groundwater. Remediation has not been completed. Contaminants are flowing from this facility to the southeast, or away from the route (see groundwater monitoring report in Appendix D). As such,

Property Name & Address	Comments
	the fuel released from this facility is not considered a potential threat to the soil and/or groundwater underlying the planned travelway. This case is up for closure.
Chevron #9-4914 43421 Monroe St., Indio, CA	- Located between 220 and 250 feet from travelway. - Gasoline was released into the underlying soil and groundwater. The soil and groundwater have both been remediated. - Case closed 10/23/1995.
Valley Block 43320 Jackson St., Indio, CA	- Located between 10 and 50 feet from travelway. - Gasoline was released into the underlying soil and groundwater. The soil and groundwater have both been remediated. - Case closed 12/31/1997.
Segment 9 – East Native Lands (Van Buren Street to Tyler Street)	
No cases listed within 1/8 mile of this segment	
Segment 10 - Coachella (Tyler Street to Airport Boulevard (Avenue 56))	
RVSD CO. Road Yard Thermal 87495 Airport Blvd., Thermal, CA	- Located between 90 and 200 feet from travelway. - Gasoline was released into the underlying soil and groundwater. The soil and groundwater have both been remediated. - Case closed 12/03/1997.

Table information source: RWQCB Geotracker

As noted on the table above, all but two of the properties (Meaders Cleaners and a Shell Service Station) that have been reported with hazardous material releases have been cleaned to the satisfaction of the RWQCB. The dry cleaning solvent released from the former dry cleaners northwest of South Palm Canyon Drive and Tahquitz Creek is not considered a threat to the health of workers, customers of the KFC restaurant that now occupies the site, or the traveling public due to the depth of the impacted soil and groundwater (more than 200 feet below ground surface). The residual gasoline-related contaminants released from the Shell service station at Monroe Street are also not considered a threat to the health of onsite workers due to the direction of contaminant travel toward the southeast, or away from the route.

The remaining 20 cases listed on the table above were reported with releases of gasoline or diesel into the underlying soil and/or groundwater. Each of these remaining cases has been closed, indicating that the remediation of the impacted soil and/or groundwater has been completed to the satisfaction of the RWQCB. The gasoline and diesel released at these properties is no longer considered a potential threat to the soil and/or groundwater underlying the route.

6.1.2 DEPARTMENT OF TOXIC SUBSTANCES CONTROL RECORDS

The Department of Toxic Substances Control (DTSC) records were searched using their map interface program at http://www.envirostor.dtsc.ca.gov/public. A search of this database revealed four properties within the route vicinity (within 1/8 mile) currently or formerly assessed by the DTSC for potentially hazardous materials. A summary of these properties and the related contaminant releases is provided on the table below.

TABLE 9

SUMMARY OF DTSC RECORDS

Property Name & Address	Comments
Abraham Lincoln Elementary School 74-100 Rutledge Way, Palm Desert, CA	- Located adjacent to proposed travelway. - A building expansion area at this school was investigated for pesticides, lead, arsenic and polychlorinated biphenyls. These potential contaminants were not found at levels of concern (no significant risk to the occupants).
Palm Desert High School 43570 Phyllis Jackson Ln. Palm Desert, CA	- Located adjacent to proposed travelway. - The buildings on this property were removed and replaced. The soils underlying the building areas were investigated for arsenic, pesticides, and polychlorinated biphenyls. These potential contaminants were not found at levels of concern (no significant risk to the occupants).
La Quinta High School 79255 Westward Ho Dr. La Quinta, CA	- Located adjacent to proposed travelway. - A school expansion area was assessed for the possible presence of contaminants. None were identified.
Dwight D. Eisenhower Elementary School 83-391 Dillon Ave. Indio, CA	- Located 200 to 500 feet from the proposed travelway. - This school property was assessed for the possible presence of metals and pesticides. - This case was closed in January 2009, indicating that these contaminants were either not found at elevated concentrations or had been removed.

Table information source: Envirostor.

As noted on the table above, each of the four near-vicinity properties formerly assessed by the DTSC were schools undergoing development or redevelopment. The potential contaminants listed were not found, found at relatively low concentrations, and/or removed. None of the potential contaminants suspected or identified at these schools are considered a potential threat to the soil and/or groundwater underlying the planned CV Link travelway.

6.2 Standard Environmental Record Sources

Environmental Data Resources, Inc. (EDR) conducted a search of available environmental records for properties located within 1/8 mile of planned route of the CV Link. EDR's report, dated May 14, 2015, is included as Appendix F of this report (electronic version only). Pages 1 through 39 of the executive summary in EDR's report list the federal and state environmental databases searched for this assessment. A description of these databases is provided at the end of EDR's report.

Maps provided in EDR's report show the location of the CV Link routes and properties within 1/8 miles of the route. As noted in the EDR report, there are approximately 163 properties listed within 1/8 mile of the route that have, or have had the potential to release hazardous materials into the subsurface soil and/or groundwater.

Due to the comprehensive nature and number of reported properties, not all of these records are discussed below. The records were only reviewed and presented herein if the adjoining properties were reported with hazardous material releases. These records, summarized on the table below, were obtained from the following databases:

- **ERNS**: The Emergency Response Notification System (ERNS) records and stores information on reported releases of oil and hazardous substances. There are 13 ERNS listings within the area searched.

- **LUST**: The Leaking Underground Storage Tank (LUST) list comes from the State Water Resources Control Board. There are 42 LUST listings within the area searched.
- **SLIC**: The Spills, Leaks, Investigation, and Cleanup (SLIC) list comes from the California Regional Water Quality Control Board. There are 2 SLIC listings within the area searched.
- **CHMIRS**: The California Hazardous Material Incident Report System (CHMIRS) contains information on accidental hazardous material releases or spills. There are 28 CHMIRS listings within the area searched.

Fifty-one hazardous material releases were reported within the area defined for this search. Due to their proximity (within 1/8 mile), the hazardous materials released at these properties would have the potential to impact the soil and/or groundwater underlying the route. Impacted groundwater beneath these properties could migrate into or toward the subject route. A description of these properties is listed on the table below.

TABLE 10

SUMMARY OF EDR PROPERTIES LOCATED WITHIN 1/8 MILE OF THE ROUTE

EDR ID No.	Business Name	Address	Environmental Database Lists	Comments
Segment 1 – North Palm Springs (Highway 111 to East Vista Chino)				
2 3	Palm Springs Oil #5 / Express Gasoline / Union Station #119	2901 N. Palm Canyon Dr., Palm Springs	HIST CORTESE, LUST	Gasoline was released into the soil underlying this property (currently the Palm Springs Visitor's Center). This case was closed in May 1998, indicating that the impacted soil has been remediated to the satisfaction of the regulating agency.
Segment 2 – Central Palm Springs (East Vista Chino to Tahquitz Creek Confluence)				
9	Not Listed	30290 San Diego Dr., Cathedral City	ERNS	An oily substance was spilled on a residential sidewalk in August 1992. This release was 140 to 350 feet from route. Based on the documentation reviewed, this oily substance was cleaned .
Segment 2A – Tahquitz Creek (Belardo Road to Whitewater River Confluence)				
14	Palm Springs Oil #8	670 S. Palm Canyon Dr., Palm Springs	LUST	Gasoline was released into the soil underlying this property. This case has been closed.
14	Caliber Collision Center	672 S. Palm Canyon Dr., Palm Springs	CHMIRS, ERNS	This 1991 accidental release of about 100 gallons of waste oil was cleaned.
14	Mr. Meat	681 S. Palm Canyon Dr., Palm Springs	LUST	Gasoline was released into the soil underlying this property. This case has been closed.
14	Mobil #18	694 S. Palm Canyon Dr., Palm Springs	LUST, CHMIRS	Gasoline was released into the soil underlying this property (currently Jack in the Box). This case was closed in 1996.
14	Not Listed	507 Sunny Dunes Rd., Palm Springs	CHMIRS, ERNS	This 1994 release involved about 0.5 gallons of a mixture of chlorine and muriatic acid. The spill was immediately cleaned.
14	Meader's Cleaners	711 S. Palm Canyon Dr., Palm Springs	Cortese, SLIC	Dry cleaning solvents were released into the soil and groundwater underlying this property. The cleanup up this release is underway. Impacted groundwater from this property has migrated beneath the route. See discussion below for further details.

EDR ID No.	Business Name	Address	Environmental Database Lists	Comments
17	Not listed	541 Industrial Pl., Palm Springs	CHMIRS	This 1988 release of potentially hazardous materials (type not specified) was cleaned the same day.
17	Brudvik Property	551 Industrial Pl., Palm Springs	LUST, HIST Cortese	Diesel was released into the soil underlying this property. This case has been closed.
22	Not Listed	1036 San Lorenzo Rd., Palm Springs	CHMIRS	This 2007 release of 50 gallons of sewage onto the roadway was cleaned the same day.
24	Mesquite Country Club	2700 Mesquite Ave., Palm Springs	LUST	Gasoline was released into the soil underlying this property. This case was closed in 1999.
31	Not Listed	1885 Golf Club Dr., Palm Springs	CHMIRS	This 2001 release of sewage from percolation ponds was reportedly cleaned.
Segment 3 – Cathedral City (Channel Confluence to Country Club Drive)				
37	Not Listed	34567 Cathedral Canyon Dr., Cathedral City	CHMIRS	This 2013 release of 1 gallon of mineral oil was reportedly cleaned.
42	C&M Building Materials, Inc.	68355 Kieley Rd., Cathedral City	LUST	Diesel was released into the soil underlying this property. This case was closed in 2001.
48	Familian Pipe & Supply	36283 Plaza Dr., Cathedral City	Hist Cortese	Diesel was released into the soil underlying this property. This case was closed in 1992.
54	Palm Springs Ford Motors	69200 Highway 111, Cathedral City	LUST	Gasoline was released into the soil underlying this property. This case was closed in 1994.
59	Exxon Station #7-3156	69800 Highway 111, Rancho Mirage	LUST	Gasoline was released into the soil underlying this property. This case was closed in 1991.
60	Not Listed	282 Turf Paradise, Rancho Mirage	ERNS, CHMIRS	This 1993 dumping of 36 containers of various pesticides was reportedly cleaned.
Segment 4 – Rancho Mirage (Country Club Drive to Monterey Avenue)				
63	Thunderbird Country Club	70612 Highway 111, Rancho Mirage	LUST	Diesel was released into the soil underlying this property. This case was closed in 2003.
67	Not Listed	Highway 111 at Evening Star, Rancho Mirage	CHMIRS	This 2011 release of 2.5 gallons of hydraulic oil was reportedly cleaned.
71	Elephant Car Wash	71490 Highway 111, Rancho Mirage	LUST	Gasoline was released into the soil underlying this property. This case was closed in 1999.
74	Texaco Station	71689 Highway 111, Rancho Mirage	LUST	Gasoline was released into the soil underlying this property. This case was closed in 1996.
79	Chevron 9-7961	71800 Highway 111, Rancho Mirage	LUST	Gasoline was released into the soil underlying this property. This case was closed in 1993.
101	Not Listed	72824 Fleetwood Cir., Palm Desert	CHMIRS	This 2007 release of 45 gallons of mineral oil was reportedly cleaned.
102	Not Listed	72920 Parkview St., Palm Desert	CHMIRS	This 2011 release of 3 gallons of mineral oil was reportedly cleaned.
Segment 5 – Palm Desert (Monterey Avenue to Fred Waring Drive)				
No hazardous material releases have been reported in this segment.				
Segment 6 – Indian Wells (Fred Waring Drive to Washington Street)				
117	City of Indian Wells Main	44900 El Dorado Dr., Indian Wells	LUST, Hist Cortese	Gasoline was released into the soil underlying this property. This case was closed in 1997.
120	City of Indian Wells Civic Center	44900 El Dorado Dr., Indian Wells	LUST	Diesel was released into the soil underlying this property. This case was closed in 2007.
118	Not Listed	44600 Indian Wells Rd., Indian Wells	ERNS	An unknown substance was released at this property in 1996. Based on the documentation reviewed, this substance was cleaned.

EDR ID No.	Business Name	Address	Environmental Database Lists	Comments
118	Not Listed	44600 Indian Wells Ln., Indian Wells	ERNS	This 1996 release of vapors was generated by mixing laundry solutions.
118	Not Listed	44600 Indian Wells Rd., Indian Wells	CHMIRS	This 2011 release of natural gas is not considered a spill that could impact soil or groundwater.
118	Not Listed	44600 Indian Wells Rd., Indian Wells	CHMIRS	This 15,000 gallon release of sewage was cleaned.
118	Stouffer Esmeralda Resort	44400 Indian Wells Ln., Indian Wells	CHMIRS	This 1997 release of chlorine vapors occurred when a bucket of chlorine tablets exploded. This was not a spill to the soil or water.
128	Not Listed	Miles Ave. at Highway 111, Indian Wells	CHMIRS	This 2000 release of 1,000 gallons of sewage to the Whitewater River Channel was not reported as having been cleaned.
128	Not Listed	Miles Ave. at Highway 111, Indian Wells	CHMIRS	This 2004 release of 4,500 gallons of sewage to the ground surface was cleaned by the responsible party.
Segment 7 – La Quinta/Indio (Washington Street to Coachella Canal)				
139	ARCO AM/PM Minimarket #5896	46150 Washington St., La Quinta	LUST	Gasoline was released into the soil underlying this property. This case was closed in 2003.
148	Not Listed	78740 Highway 111, La Quinta	ERNS	This 2006 dumping of 60 gallons of latex paint waste into the storm drain was not reported as cleaned.
147	The Home Depot	79900 Highway 111, Indio	CHMIRS	This 2000 release of 1 gallon of muriatic acid onto the ground was cleaned.
140	Pan American (Vacant Lot)	Shields Rd. & Ave. 46, Indio	LUST	No data was provided for this release in any of the databases searched. It involved a release from an underground tank.
133	Not Listed	80759 Dartmouth Ave., Indio	CHMIRS	This 2007 release of 5 gallons of gasoline to the road surface and then storm drain was cleaned by city.
Segment 8 – Indio (Coachella Canal to Van Buren Street)				
87	Not Listed	81824 Trader Place, Bldg. A, Indio	CHMIRS	This 2006 release of fire water run-off (that contained basic and metal-containing solutions) was not reported as having been cleaned.
93	76 Products Facility #6351	43401 Monroe St., Indio	LUST	Gasoline was released into the soil underlying this property. This case was closed in 2002.
93	Shell Oil Company	43411 Monroe St., Indio	LUST, Hist Cortese	A gasoline release at this property has impacted the underlying soil and groundwater. Cleanup and monitoring are near completion.
93	Chevron Station #9-4914	43421 Monroe St., Indio	LUST, Hist Cortese	Gasoline was released into the soil and groundwater underlying this property. This case was closed in 1995.
98	Not Listed	Sage Brush & Lemon Grove St., Indio	CHMIRS	This 1991 release of an unknown substance was not reported as having been cleanup.
99	Valley Block Co.	43320 Jackson St., Indio	LUST	Gasoline was released into the soil and groundwater underlying this property. This case was closed in 1997.
111	Not Listed	83300 Avenue 44, Indio	ERNS	This 1991 release of 5 gallons of used motor oil to the storm drain was cleaned by the city public works department.
115	CHMIRS	Dillon St. & Tourmaline St., Indio	CHMIRS	This 1990 release of an unknown material was cleaned the same day.

EDR ID No.	Business Name	Address	Environmental Database Lists	Comments
134	Not Listed	45435 Van Buren Ave., Indio	ERNS	This 1993 release of 140 gallons of transformer oil (to the storm drain) was cleaned.
134	Valley SD WWTP	45500 Van Buren Ave., Indio	CHMIRS, Cortese	This 2003 release of 68,000 gallons of sewage was reportedly cleaned. A 2007 release of 100 gallons of sodium bisulfite (to the soil) was also reportedly cleaned.
Segment 9 – East Native Lands (Van Buren Street to Tyler Street)				
No hazardous material releases have been reported in this segment.				
Segment 10 – Coachella (Tyler Street to Airport Boulevard (Avenue 56))				
162	Riv. Co. Road Yard	87495 Airport Blvd., Thermal	LUST, Hist Cortese	Gasoline was released into the soil and groundwater underlying this property. This case was closed in 1997.

Table information source: EDR

As noted above, all but five of the properties that have been reported with hazardous material releases have been cleaned to the satisfaction of the regulatory agencies. The property located immediately northwest of South Palm Canyon Drive and Tahquitz Creek (Meader's Cleaners at 711 South Palm Canyon Drive) released tetrachloroethene (PCE; a common dry cleaning solvent) into the underlying soil and groundwater. The most recent groundwater monitoring report for this property shows that the PCE-impacted groundwater has migrated beneath the planned CV Link route (Arcadis, 2016). The estimated extent of contaminated groundwater as a result of this release is shown on Map Pages 15 and 16. Excerpts of a recent groundwater monitoring report are provided in Appendix E. As noted in this report, the depth to the PCE-impacted water was measured between 215 and 244 feet beneath the surface in this area in October 2015. As such, the potential that the PCE underlying the route could impact onsite workers is considered nil.

The second listed property that has not been reported as cleaned involved the dumping of wastewater that contained latex paint. This wastewater was dumped into a storm drain in 2006 near the intersection of Washington Street and Highway 111 in La Quinta. Due to the substance spilled (latex paint) and the date in which it was released (non-leaded), this release is not considered a threat to the soil, groundwater, or health of onsite workers.

The third listed property is located at the corner of Shields Road and Avenue 46. It is not known if this is Shields Park or an adjoining water tank property. Potentially hazardous materials (likely fuels) were released from an underground tank on this property. The CV Link route is located up to 8 feet above and upgradient of this potential release area. The materials released from the underground tank are not considered a potential threat to the soils underlying the route.

The fourth listed property, at 81824 Trader Place in Indio, is also located up to 8 feet below and down-gradient of the route. Metal solutions were released from this property during a fire. Due to the location of this release (down-gradient), any residual contaminants (metals and basic solutions) are not considered a threat to the soils underlying the CV Link route on the adjoining levee.

The fifth listed property, a Shell service station located between 220 and 250 feet south of the travelway near the route at Monroe Street, is currently being remediated and monitored as a result of a gasoline spill. The fuel released at this facility had flowed toward the southeast, or away from the route. The remediation of soil and groundwater underlying this property appears to have been completed or is near

completion. A request for closure submitted in January has not yet been approved (Frey, 2015). Due to the down-gradient location of this property, any residual gasoline-related contaminants associated with this release are not considered a threat to the soil and groundwater underlying the planned travelway.

The remaining releases are reported as having been closed, indicating that the impacted soils have been cleaned to the satisfaction of the regulating agencies. Due to their closed status, the impacted soil and groundwater formerly located at these properties are not considered a potential threat to the soil and/or groundwater underlying the site.

7.0 FINDINGS

Pesticides - The CV Link route passes through areas that were formerly in agricultural use. Portions of the CV Link route also pass near lands currently in active cultivation. It is considered likely that persistent pesticides (such as DDT) were applied to converted agricultural lands, and may have once been present in their near-surface soils. It is also considered likely that fertilizers and herbicides were applied to these agricultural lands. Unlike persistent pesticides, however, fertilizers and herbicides are typically not accumulative and dissipate relatively rapidly with time.

These now abandoned and largely developed agricultural properties (primarily orchards) were formerly located within and adjacent to the CV Link route between Monterey Avenue and Airport Boulevard. The location of these agricultural lands, which were mostly taken out of agriculture several years ago, included the following areas:

- The College of the Desert Campus in Palm Desert was formerly occupied by orchards. These orchards were removed from the campus prior to its development between 1958 and 1962.
- The agricultural lands adjacent to the Whitewater River between Monterey Avenue and Fred Waring Drive were mostly removed from the CV link route when the river was channelized in the mid-1960s. The agricultural lands adjoining this area were removed in their entirety between 1984 and 1994.
- Between Jefferson Street and Indio Boulevard, the adjoining eastern properties were in agricultural use (orchards) between at least 1944 and 1972. These lands have since been replaced with residential developments.
- The adjoining agricultural areas formerly located south of the CV Link route between Indio Boulevard and Van Buren Street were removed in the 1940s and 1950s. These areas have been redeveloped with residential developments and some light industrial facilities.
- Between Van Buren Street and Avenue 52, the adjoining western properties have periodically been in agricultural use (fields and row crops) since the 1970s.

Based on a review of the CV Link route and the historical site uses, elevated pesticide concentrations are not anticipated in the surficial soils that cover the CV Link routes. The land within and adjacent to the College of the Desert (COD) Campus in Palm Desert, where orchards and date gardens once stood, has been redeveloped. The CV Link's routes along the banks of the Whitewater River and Coachella Valley Stormwater Channels were also redeveloped during engineered channelization. During the construction of the campus and the flood control channels, the surficial soils that may have formerly contained residual pesticide concentrations would have been mixed with cleaner deeper soils, resulting in a significant reduction of the pesticide concentrations. Note that previous testing of agricultural properties by TNPR within the Coachella Valley has not revealed pesticide concentrations that exceed regulatory limits.

Most of the agricultural activities that occurred adjacent to the site between Jefferson Street and Airport Boulevard (Avenue 56) took place in fields and orchards that were located below the existing levee that contains the CV Link route. It is not considered likely that pesticides were sprayed directly onto this levee. Therefore, elevated pesticide concentrations (concentrations that exceed regulatory limits) are not anticipated to exceed regulatory limits anywhere along the CV Link route.

Chemical/Petroleum Hydrocarbon Materials - With the exception of solvents and possibly transformer oil, potentially hazardous chemicals/petroleum hydrocarbons were not encountered within the CV Link route during this assessment. A dry cleaning solvent (tetrachloroethene) was used within the dry cleaning facility (Meader's Cleaners) formerly located immediately northwest of South Palm Canyon Drive and Tahquitz Creek. This solvent was released into the underlying soils and groundwater. The cleanup of this release is currently underway by way of vacuum extraction technology. Recent groundwater data show that the impacted groundwater is located beneath the CV Link route approximately 300 feet east and west of South Palm Canyon Drive. Due to the depth to groundwater, 215 to 245 feet below ground surface in this area, the solvents in the underlying groundwater are not considered a potential threat to future workers of CV Link structures in this area. Solvent-impacted soils will not be encountered in this area during construction activities related to CV Link.

Two pad-mounted transformers are located within or immediately adjacent to the planned CV Link route. They are located on the east side of Cathedral Canyon Drive and 540 feet northwest of Frank Sinatra Drive. Possible releases from these transformers were not observed at the time of the route reconnaissance.

Potentially Hazardous Material Storage Structures - With the possible exception of electric transformers (discussed above), there were no potentially hazardous material storage structures observed along the CV Link route. Underground fuel tanks are or have been located within or immediately adjacent to the CV Link route. Gasoline and/or diesel have been released from underground storage tanks at 11 properties that are located within 300 feet of the CV Link route. These properties include:

- Palm Springs Visitor's Center (formerly fuel station: gasoline cleanup completed in 1998)
- Venita Brudvik, Palm Springs (diesel cleanup completed in 1996)
- Rocky's Pawn Shop, Palm Springs (formerly Mr. Meats: gasoline cleanup completed in 1992)
- Palm Springs Ford Motors (gasoline cleanup completed in 1994)
- Elephant Car Wash, Rancho Mirage (gasoline cleanup completed in 1999)
- City of Indian Wells (gasoline and diesel cleanup completed in 1997 and 2007, respectively
- Arco AM/PM #5898, L Quinta (gasoline cleanup completed in 2003)
- 76 Service Station #6351, Indio (gasoline cleanup completed in 2002)
- Shell Service Station, Indio (gasoline cleanup near completion)
- Valley Block, Indio (gasoline cleanup completed in 1997)
- Riverside County Road Yard, Thermal (gasoline cleanup completed in 1996)

With one exception, the cleanup of these spills has been completed to the satisfaction of the regulatory agencies. Due to the completion of cleanup activities, the potential that gasoline- and/or diesel-impacted soils will be encountered at or near these properties during construction of the CV Link project is considered nil. The cleanup of gasoline at the remaining property (the Shell Service Station on Monroe Street in Indio) is reported to be near completion. As such, the gasoline released at this property is also not considered a potential threat to the soils and/or groundwater underlying the route. None of the reported releases, including the at the Palm Springs Visitor's Center, occurred within 50 feet of the planned CV Link Route.

Regulatory Actions - Regulatory actions have been requested at two of the properties that include the CV Link route. The cleanup of gasoline fuel was required at the Palm Springs Visitor Center. This case was closed in May 1998 after the gasoline-impacted soils had been removed. Regulatory actions have also

been requested at the onsite KFC property. This case remains open due to the elevated solvent concentrations in soil and groundwater underlying this property and the adjoining areas.

Regulatory actions have been requested for many properties that adjoin the CV Link route or are within 1/8 miles of the route. These properties were primarily fuel service stations or businesses that contained underground fuel tanks (see list above). With one exception, all of these have been closed. As noted above, a case remains open for the Shell Service Station located on the southwest corner of Monroe Street and the CV Link route in Indio. This case is currently up for closure.

Regional or Adjacent Hazardous Material Releases - National Priority List (NPL) properties (large-scale releases of hazardous materials) are not reported within 1 mile of the CV Link's route. With the exception of the former dry cleaning facility located northwest of Tahquitz Creek and South Palm Canyon Drive (see Section 6.1.1), there are no regulatory listed properties within 1/8 mile of the route that are considered as having the potential to impact the soil and/or groundwater underlying the route.

8.0 CONCLUSIONS AND RECOMMENDATIONS

8.1 Conclusions

8.1.1 SITE BACKGROUND

Up to at least 1955, most of the properties that were included within and adjacent to the CV Link route and alternatives between Palm Springs and Coachella were either undeveloped or in agricultural use. The route still passes through or adjacent to undeveloped lands. The agricultural properties (primarily orchards) were generally located between Monterey Avenue and Airport Boulevard (from Palm Desert to Coachella). Orchards within the College of the Desert Campus in Palm Desert were removed between 1958 and 1962. The agricultural lands located adjacent to the Whitewater River between Monterey Avenue and Fred Waring Drive were removed from the CV link route area when the river was channelized in the mid-1960s. Between Jefferson Street and Van Buren Street, the adjoining agricultural properties were primarily replaced with residential developments between the 1940s and 1970s. Between Van Buren Street and Avenue 52, fields and row crops have been grown locally immediately west of the site between the 1970s and present.

Levees were constructed along the Whitewater River and along the CV Link route between 1955 and 1975. The upper portions of these levees are generally level and contain unpaved service roadways. Paved trails were established along the upper portions of these levees in Cathedral City between 1996 and 2002.

The most common type of development encountered adjacent to the CV Link route are residential developments. These developments have been growing in number since the 1960s. The CV Link path passes adjacent to (and between) a number of these developments along its entire route. The CV Link route also passes through and adjacent to several parks and commercial shopping centers. Parks, such as Desert Highland Park and Demuth Park in Palm Springs, were developed in the 1950s and 1960s. Many of the larger shopping centers that adjoin the site in Cathedral City, Rancho Mirage, and La Quinta were developed in the 1990s.

Other adjoining developments in the 1970s, 1980s, and 1990s include golf courses, resorts, and schools (including Palm Desert High School and La Quinta High School). A relatively small number of manufacturing facilities and equipment yards were developed adjacent to the site during this period. These facilities are primarily located southwest of Monroe Street and the channel in Indio, and west of the route between Indio Center Drive in Indio and Airport Boulevard in Coachella.

8.1.2 ONSITE HAZARDOUS MATERIAL STORAGE STRUCTURES AND RELEASES

Onsite Hazardous Material Spills - With two exceptions, hazardous material spills have not impacted the soil and/or groundwater underlying the CV Link route. A dry cleaning facility (currently a KFC restaurant at 711 South Palm Canyon Drive in Palm Springs) formerly located immediately northwest of the Tahquitz Creek and South Palm Canyon Drive released a dry cleaning solvent (tetrachloroethene) into the underlying soil and groundwater. The impacted soils within this facility are currently being remediated via vapor extraction technology. Groundwater remediation equipment was not observed within the site vicinity at the time of this assessment, although the groundwater contaminant concentrations have been decreasing since the beginning of soil remedial activities. The impacted groundwater is located beneath the CV Link route at least 600 feet east and 600 feet west of South Palm Canyon Drive. The impacted groundwater underlying this area is at depths between 220 and 240 feet. Due to its depth, the potential that impacted soils will be encountered during the construction of the CV Link route is considered nil. The planned excavations in this area (for signage, etc.) are not anticipated to be greater than 4 feet. As such, these underlying impacted soils are not considered a potential threat to the health of those using the site.

A gasoline fuel station was formerly located within the property located immediately northwest of Tramway Road and State Route 111 (currently the Palm Springs Visitor's Center). Gasoline was released from the associated underground fuel tanks and impacted the underlying soils (not groundwater). The impacted soil was cleaned to the satisfaction of the regulating agency. As such, the gasoline-impacted soils formerly underlying this property are not considered a potential threat to human health or the environment.

Underground Fuel Tank Releases - Gasoline and/or diesel have been released from underground storage tanks at 10 properties located within 300 feet of the CV Link route. These properties include:

- Venita Brudvik, Palm Springs (diesel cleanup completed in 1996)
- Rocky's Pawn Shop, Palm Springs (formerly Mr. Meats: gasoline cleanup completed in 1992)
- Palm Springs Ford Motors (gasoline cleanup completed in 1994)
- Elephant Car Wash, Rancho Mirage (gasoline cleanup completed in 1999)
- City of Indian Wells (gasoline and diesel cleanup completed in 1997 and 2007, respectively)
- Arco AM/PM #5898, La Quinta (gasoline cleanup completed in 2003)
- 76 Service Station #6351, Indio (gasoline cleanup completed in 2002)
- Shell Service Station, Indio (gasoline cleanup near completion)
- Valley Block, Indio (gasoline cleanup completed in 1997)
- Riverside County Road Department Yard, Thermal (gasoline cleanup completed in 1996)

With one exception, the cleanup of these spills has been completed to the satisfaction of the regulatory agencies. Due to their apparent cleanup, the potential that gasoline- and/or diesel-impacted soils will be encountered near these properties during construction of the CV Link project is considered very low. The cleanup of gasoline at the 76 Service Station (#6351) in Indio is reported to be near completion. As such, the gasoline released at this property is also not considered a potential threat to the soils and/or groundwater underlying the site. None of these reported releases occurred within 50 feet of the planned CV Link routes.

Near-Vicinity Surface Spills - Surface spills of potentially hazardous materials (including mineral oil, motor oil, laundry soap, sewage, basic solutions, and metal solutions) have been reported at nine properties located with 300 feet of the CV Link routes. None of these releases were located within 50 feet of the CV Link routes. Each of these releases is reported as having been cleaned, generally on the same day of the release.

Transformer Oils - Pad-mounted electric transformers were observed immediately adjacent to the CV Link route in two areas (east side of Cathedral Canyon Drive and 540 feet northwest of Frank Sinatra

Drive). Indications of transformer oil releases from these transformers were not encountered during the site reconnaissance.

Pesticides - Based on a review of the CV Link route and its historical uses, elevated pesticide concentrations are not anticipated in the associated surficial soils. The land within and adjacent to the College of the Desert Campus in Palm Desert, where orchards and date gardens once stood, has been redeveloped. The CV Link routes along the banks of the Whitewater River and Coachella Valley Stormwater Channels were also redeveloped during engineered channelization. During the construction of the campus and the flood control channels, the surficial soils that may have formerly contained residual pesticide concentrations would have been mixed with cleaner deeper soils, resulting in a significant reduction of any pesticide concentrations. Most of the agricultural activities that occurred adjacent to the site between Jefferson Street and Avenue 56 took place in fields and orchards that were located below the existing levee that contains the CV Link route. It is not considered likely that pesticides were sprayed directly onto this levee. Therefore, elevated pesticide concentrations (concentrations that exceed regulatory limits) are not anticipated to exceed regulatory limits anywhere along the CV Link route.

Aerially Deposited Lead - Relatively elevated lead concentrations (higher than background levels) are often encountered within unpaved areas (or formerly unpaved areas) adjoining older roadways. This is primarily the result of deposition of aerially deposited lead (ADL) from historic vehicle emissions. The phasing out of leaded gasoline began in 1973, and has been banned in California since 1992. Representative surface soil samples were collected immediately adjacent to 30 of the oldest roadways that cross the CV Link route. This shallow sampling depth, between the soil surface and depth of 6 inches, typically has the highest lead concentrations. These shallow soils are considered most likely to be disturbed during construction activities along the CV Link route. Each of the collected soil samples was analyzed for lead. The lead concentrations reported in these collected samples were relatively low, and not considered potentially hazardous to health based on current screening levels. Based on a review of current State requirements, the near-surface soils within the planned CV Link route and adjacent to older roadways can be handled as a non-hazardous waste. It can be reused as construction fill.

8.2 Recommendations

Additional environmental studies are not recommended for the CV Link routes. With the exception of the KFC property located on South Palm Canyon Drive in Palm Springs, there are no known onsite conditions that would warrant regulatory involvement, including actions leading to environmental soil sampling, soil remediation, groundwater sampling, and/or groundwater remediation. Soil and groundwater sampling and/or remediation are currently underway at the KFC property. Any additional sampling and/or remediation will be conducted by the responsible party. Existing and long-term conditions at the KFC site will not constrain CV Link construction or use.

Based on the findings of this assessment, additional ADL studies are not considered warranted, nor are recommended for the CV Link routes. As noted above, the lead concentrations reported in soil collected adjacent to the older roadways are not considered a potential threat to human health (less than regulatory health screening levels). Therefore, there are no requirements related to lead monitoring or engineering controls during any planned construction activities along any of the Link routes.

If the pad-mounted or pole-mounted transformers situated within or immediately adjacent to the CV Link routes are required to be removed during construction activities, it is recommended that they be tested for PCBs prior to their removal and disposal. If PCBs are identified, the transformers and associated fluids should be transported offsite and disposed in accordance with Riverside County protocol.

It is recommended that an Environmental Contingency Plan be prepared prior to any subsurface investigation or construction activities along the CV Link route. This plan will help identify and respond to undocumented hazardous material release areas. Although not anticipated, such areas could be the

result of historic dump sites, pipeline releases, or illegal dumping. This plan will also be used to identify and respond to accidental hazardous material releases that occur during construction activities, such as an accidental fuel spill. The plan should provide step-by-step responses for the field and office personnel to follow in order to resolve the environmental incident in the quickest manner possible. In addition to listing the required reporting and communication, it should include a detailed description of cleanup methodologies and hazardous material disposal sites.

9.0 LIMITATIONS

The information provided in this report is based on the scope of work authorized by the client, information obtained during the investigation, requirements of the guidelines for preparing initial site assessments, and the professional judgment of Terra Nova Planning & Research, Inc. personnel.

This ISA, conducted between June 2015 and June 2016, is based on information made available during the course of this assessment. Terra Nova Planning & Research, Inc. relied on the information collected during our assessment, presented in the former reports, and/or provided by the client or others to conduct our assessment and arrive at our conclusions. Terra Nova Planning & Research, Inc. assumes that information provided by others is accurate to the extent used by Terra Nova Planning & Research, Inc.

Services performed by Terra Nova Planning & Research, Inc. were conducted in a manner consistent with state-of-the-industry-practices, recognizing that even the most comprehensive investigation may not detect all hazardous materials/waste at the site. Therefore, Terra Nova Planning & Research, Inc. cannot act as an insurer or certify that the site is free of hazardous materials/waste. Except as expressly set forth herein, no representation or warranty is included in our report.

The report is the property of the client for whom it was prepared. Its distribution to others is at client's discretion.

10.0 PROFESSIONAL STATEMENT

This Initial Site Assessment report was prepared by Mr. Quin Kinnebrew, an Environmental Professional who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of hazardous material releases or threatened releases on, at, in, or to a property. He is sufficiently qualified to meet the objectives and performance of this assessment. Mr. Kinnebrew holds a current Professional Geologist's license (PG# 5696) in California and has more than 24 years of full-time relevant experience. He obtained his Master's degree from an accredited institution (Texas A&M University) in the discipline of engineering geology. Mr. Kinnebrew has continued to build on his environmental-related knowledge through participation in continuing education and work-related experience.

Environmental Professional Statement - I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Quin Kinnebrew

This property was reported with a release of sewage (68,000 gallons) in 2003 and 100 gallons of sodium bisulfite in 2007. The impacted soil was reportedly cleaned.

About 140 gallons of transformer oil were spilled onto this property in 1993. This spill was cleaned.

ROUTE RECONNAISSANCE PHOTOGRAPHS

Photo No. 1 – North view of parking lot within Palm Springs Visitor's Center.

Photo No. 2 – Northwest view along sidewalk east of Highway 111.

Photo No. 3 – Southeast view along planned route west of Highway 111.

Photo No. 4 – West view along levee west of Indian Canyon Dr.

Photo No. 5 – South view of undeveloped land north of Desert Highland Park.

Photo No. 6 – South view of route through Desert Highland Park.

Photo No. 7 – Northwest view along the Whitewater River levee.

Photo No. 8 – Southeast view along the levee east of Gene Autry Trail.

Photo No. 9 – Southeast view along levee, south of Vista Chino.

Photo No. 10 – Southwest view of vacant properties near San Diego Drive.

Photo No. 11 – Northeast view of area beneath Ramon Road Bridge.

Photo No. 12 – North view along levee north of Dinah Shore Dr.

Photo No. 13 – Southeast view beneath Dinah Shore Dr.

Photo No. 14 – South view along paved trail south of 34th Avenue.

Photo No. 15 – West view of vacant land east of Belardo Road.

Photo No. 16 – West view of walkway along south side of S. Riverside Dr.

Photo No. 17 – North view along Sunrise Way.

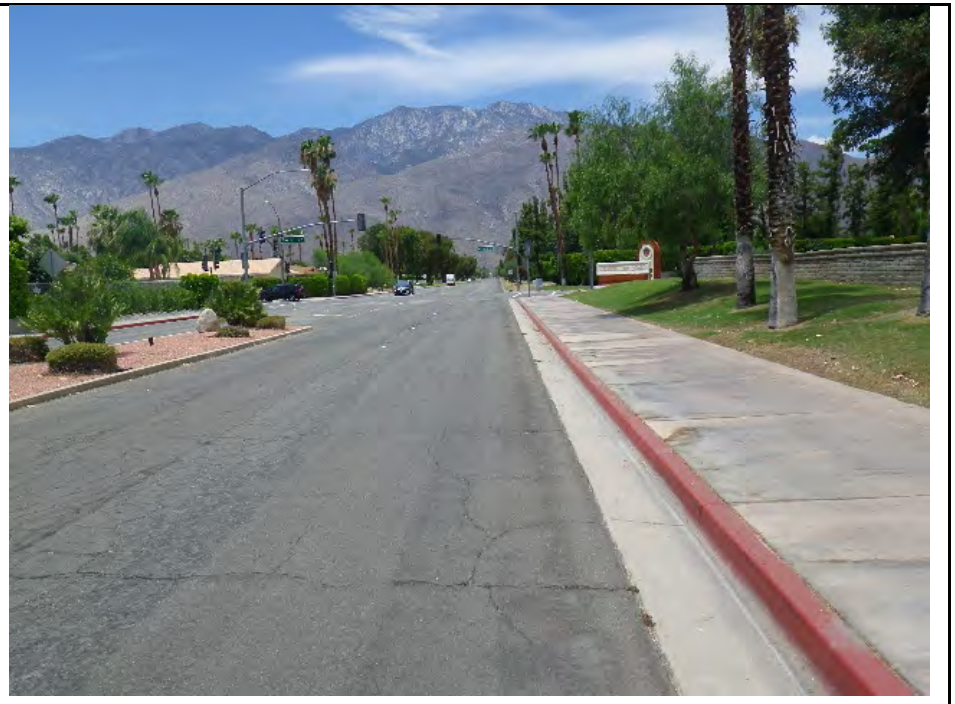

Photo No. 18 – West view along Mesquite Avenue.

Photo No. 19 – Northwest view of segment just west of El Cielo Rd.

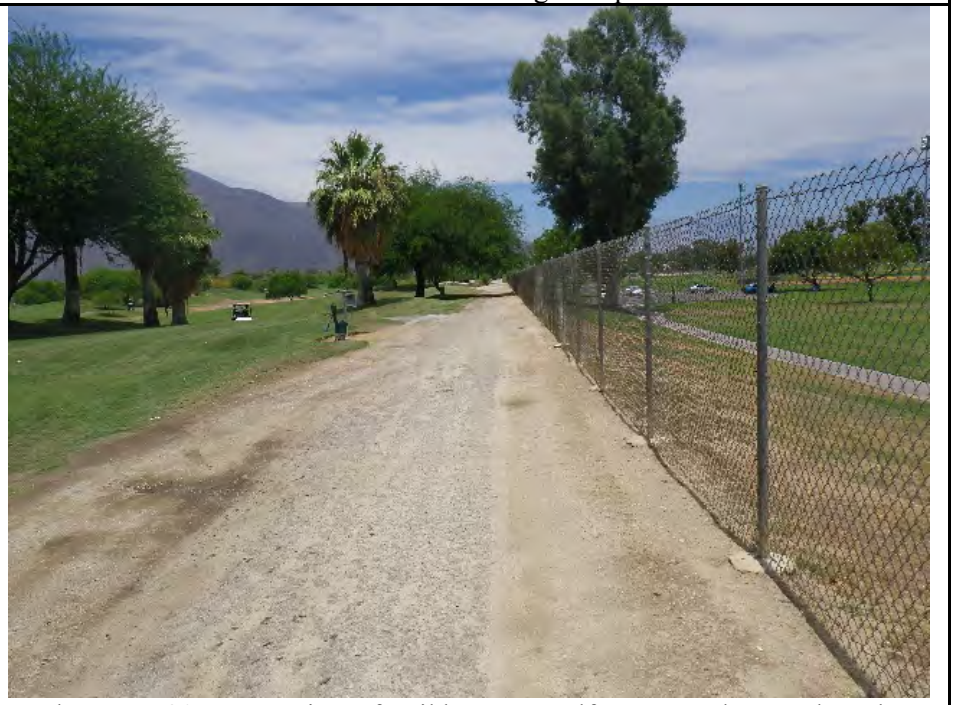

Photo No. 20 – West view of trail between golf course and Demuth Park.

Photo No. 21 – West view of bike trail west of Crossley Road.

Photo No. 22 – East view of 34th Avenue.

Photo No. 23 – South view of Jenkins Trail from channel confluence.

Photo No. 24 – NW view of cart path on western side of Whitewater River.

Photo No. 25 – Southeast view of route east of Cathedral Canyon Drive.

Photo No. 26 – Southeast view of route northwest of Frank Sinatra Drive.

Photo No. 27 – SW view of south alternate route south of Frank Sinatra Dr.

Photo No. 28 – Southwest view of the Joe Butler Trail at its river crossing.

Photo No. 29 – SE view of route between Country Club Dr. and Paxton Dr.

Photo No. 30 – Southeast view along route south of Paxton Drive.

Photo No. 31 – East view of route along channel west of Bob Hope Drive.

Photo No. 32 – Northwest view of San Jacinto Drive.

Photo No. 33 – Southeast view of route along Highway 111.

Photo No. 34 – West view of Park View Drive, west of Monterey Avenue.

Photo No. 35 – East view of route along road within college campus.

Photo No. 36 – South view along San Pablo Avenue.

Photo No. 37 – West view of route along Magnesia Falls Drive.

Photo No. 38 – North view along San Pasqual Channel.

Photo No. 39 – West view along river route, east of San Pasqual Channel.

Photo No. 40 – East view along river route, west of Cook Street.

Photo No. 41 – Southeast view of route along river, east of Fred Waring Dr.

Photo No. 42 – West view of Highway 111, east of El Dorado Drive.

Photo No. 43 – SE view of route through golf course, east of El Dorado Dr.

Photo No. 44 – North view of route through golf course, west of Miles Ave.

Photo No. 45 – East view of route, west of Miles Avenue.

Photo No. 46 – Southeast view of route, east of Miles Avenue.

Photo No. 47 – Southeast view of route, east of Washington Street.

Photo No. 48 – Northwest view of route, west of Dune Palms Drive.

Photo No. 49 – Northeast view of route east of Jefferson Street.

Photo No. 50 – Southeast view of route across La Quinta Channel.

Photo No. 51 – Northeast view of route just north of Avenue 46.

Photo No. 52 – Northeast view of route from Miles Avenue.

Photo No. 53 – Southwest view of route from Fred Waring Drive.

Photo No. 54 – Northeast view of route from Fred Waring Drive.

Photo No. 55 – East-northeast view of route east of Indio Boulevard.

Photo No. 56 – East view of route east of Monroe Street.

Photo No. 57 – Southeast view of route southeast of Jackson Street.

Photo No. 58 – Southeast view of route south of Avenue 44.

Photo No. 59 – Southeast view of route east of Van Buren Street.

Photo No. 60 – Southeast view of route northeast of Dillon Road.

Photo No. 61 – North view of area where route passes under Dillon Road.

Photo No. 62 – Southeast view of route southeast of Dillon Road.

Photo No. 63 – Northwest view of route from Avenue 50/Tyler Street.

Photo No. 64 – Southeast view of route south of Avenue 50.

Photo No. 65 – Northwest view of route north of Avenue 52.

Photo No. 66 – Northeast view of route beneath Avenue 52.

Photo No. 67 – Southeast view of route from Avenue 52.

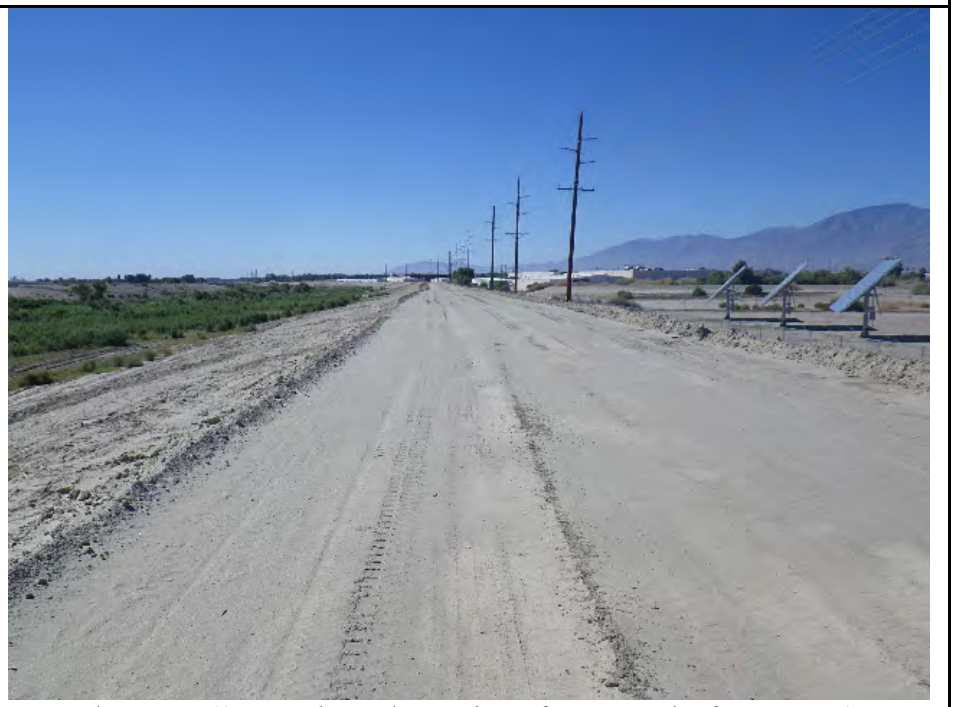

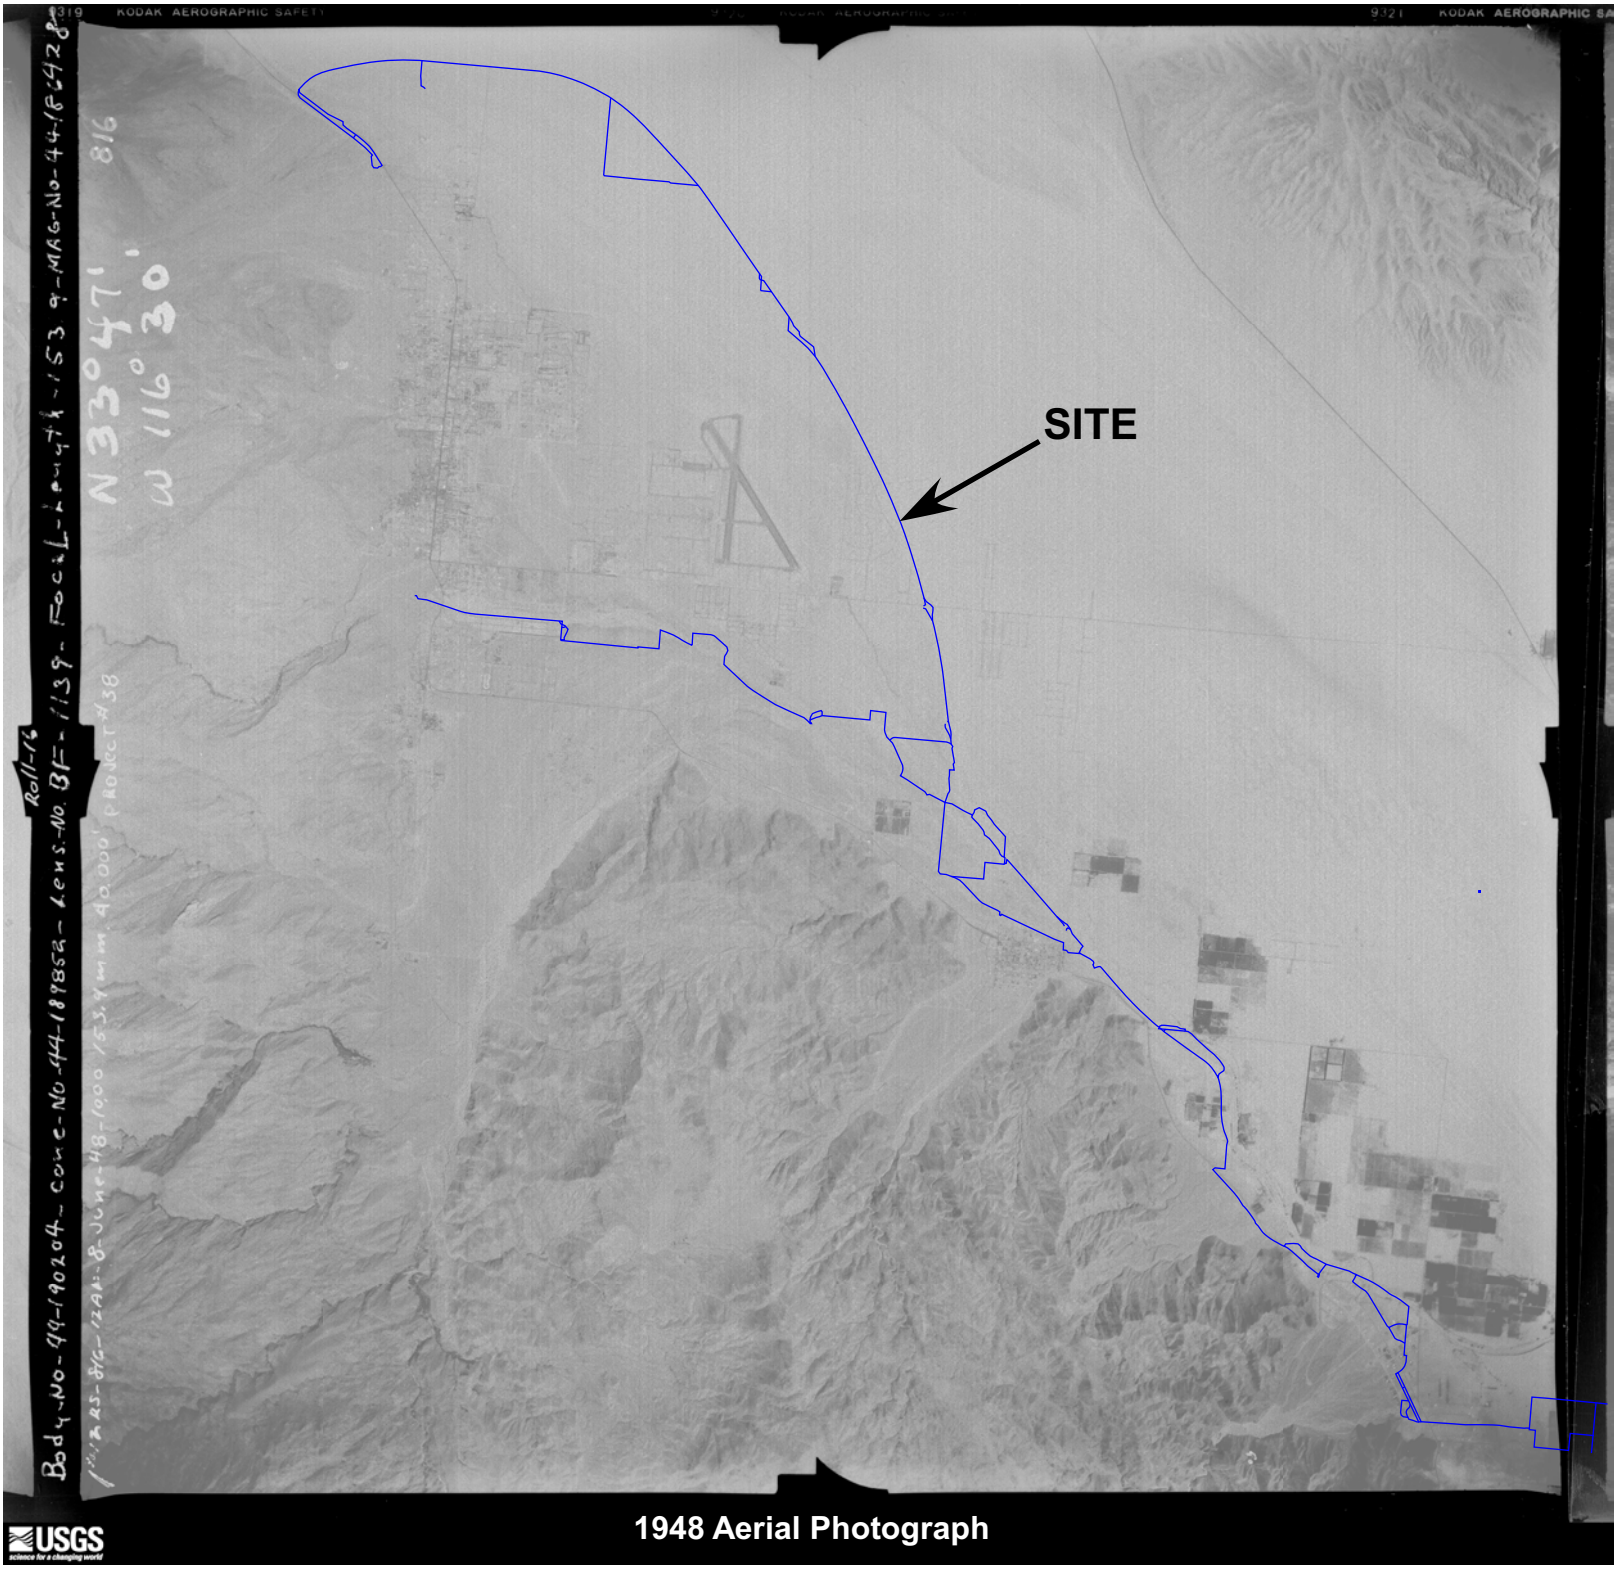

Photo No. 68 – South-southeast view of route south of Avenue 54.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments
No additional comments.

Receipt
The samples were received on 8/10/2015 11:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 26.7º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Definitions/Glossary

Client: Black Rock Geosciences
Project/Site: Coachella Valley Link - Lead

TestAmerica Job ID: 440-117558-1

Qualifiers

General Chemistry

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: Black Rock Geosciences
Project/Site: Coachella Valley Link - Lead

TestAmerica Job ID: 440-117558-1

Laboratory: TestAmerica Irvine

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

Authority	Program	EPA Region	Certification ID	Expiration Date
Alaska	State Program	10	CA01531	06-30-16
Arizona	State Program	9	AZ0671	10-13-15
California	LA Cty Sanitation Districts	9	10256	01-31-16 *
California	State Program	9	2706	06-30-16
Guam	State Program	9	Cert. No. 12.002r	01-23-16
Hawaii	State Program	9	N/A	01-29-16
Nevada	State Program	9	CA015312007A	07-31-16 *
New Mexico	State Program	6	N/A	01-29-16
Northern Mariana Islands	State Program	9	MP0002	01-29-16
Oregon	NELAP	10	4005	01-29-16
USDA	Federal		P330-09-00080	07-08-18

* Certification renewal pending - certification considered valid.

440-117558 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other _____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☒ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ Return to Client ☐ Disposal by Lab ☐ Archive for_____ Months

Special Instructions/QC Requirements & Comments:

Custody Seals Intact: ☐ Yes ☐ No	Custody Seal No.:		Cooler Temp. (°C): Obs'd:_____ Corr'd:_____		Therm ID No.:_____

Subject:

Fourth Quarter 2015 Groundwater Monitoring Report

Meaders Cleaners Site
711 South Palm Canyon Drive
Palm Springs, California

Date:
February 1, 2016

Contact:
Joni Kropf

Phone:
775-229-8865

Email:
Joni.Kropf@arcadis.com

Our ref:
RV009129.0015

Dear Ms. Fleming:

On behalf of Palm Springs Landscape Company (PSLC) and Meaders Cleaners (collectively "the Parties"), Arcadis U.S., Inc. (Arcadis) has prepared this status report presenting the results of groundwater monitoring activities conducted during the fourth quarter 2015 at the Meaders Cleaners Site, located at 711 South Palm Canyon Drive, Palm Springs, California ("the Site"; Figure 1). This report is submitted pursuant to Regional Water Quality Control Board, Colorado Basin Region (RWQCB) Cleanup and Abatement Order 97-145. Monitoring activities were completed during the fourth quarter 2015 in accordance with the "Work Plan to Conduct Groundwater Monitoring and Soil Gas Headspace Sampling at the Meaders Cleaners Site, Palm Springs, California," prepared by LFR Inc. and submitted to the RWQCB on June 12, 2006.

Scope of Work

The scope of work completed for the fourth quarter 2015 groundwater monitoring event includes the following:

- Depth to water was measured in groundwater monitoring wells MW-1 through MW-9, in multiple-depth nested well MW-10 (MW-10A, -10B, and -10C), MW-11, MW-12, and sparge wells SW-1 and SW-2 (Figure 2) on October 27, 2015 using an electronic water level meter.

- Groundwater samples were collected from monitoring wells MW-1 through MW-9, MW-10A through MW-10C, MW-11, and MW-12, and air sparge wells SW-1 and SW-2 between October 27 and 28, 2015. Prior to collection of a groundwater sample, wells were purged using standard low-flow, micro-purging methods. Field parameters (groundwater temperature, pH, specific conductance, and relative turbidity) were monitored for stabilization during the purging process for each monitoring well sampled.

- Groundwater samples collected were analyzed by Sunstar Laboratories, Inc., of Lake Forest, California, a California state-certified analytical laboratory, for volatile organic compounds using EPA Method 8260B.

Results of the fourth quarter 2015 groundwater monitoring event are attached as follows:

- Table 1 presents a summary of current and historical depth-to-water measurements, groundwater elevation data, and chemical analysis data for groundwater.

- Figure 3 presents concentrations of tetrachloroethene (PCE) and trichloroethene (TCE) detected in groundwater samples collected from Site monitoring wells during recent and historical monitoring events.

- Concentration-versus-time charts for selected groundwater monitoring wells are presented on Figures 4 through 12.

- Laboratory data sheets and chain-of-custody forms are included in Appendix A and field data sheets from the October 2015 groundwater monitoring event are included in Appendix B.

Results Summary and Discussion

Direction of Groundwater Flow

Groundwater elevations calculated from depth-to-groundwater measurements collected during the fourth quarter 2015 event are summarized in Table 1 and presented on Figure 2.

Groundwater flow direction in the vicinity of the Site was generally toward the south with a horizontal hydraulic gradient of approximately 0.004 foot per foot (Figure 2) during the fourth quarter 2015 monitoring event. The groundwater flow direction is generally consistent with recent and historical monitoring events.

Change in Groundwater Elevation

Groundwater elevations beneath the Site had exhibited an overall decreasing trend beginning in 2001. By 2009, groundwater elevations at the Site had decreased approximately 45 feet resulting in a majority of the monitoring wells going dry. A gradual increase in groundwater elevations had been observed in Site monitoring wells beginning in early 2010.

During the October 2015 monitoring event, depth to water in groundwater monitoring wells at the Site ranged from 215.72 feet below top of casing (btoc, MW-4) to 244.41 feet btoc (MW-7). Groundwater elevations ranged from 212.13 feet above mean sea level (amsl, MW-9) to 215.68 feet amsl (MW-3). Groundwater elevations decreased in all Site monitoring wells between the August 2015 and October 2015 monitoring events at magnitudes ranging from 0.34 foot (MW-10C) to 1.34 feet (MW-3).

Groundwater Quality

Onsite and Source Area Wells

PCE was detected in monitoring well MW-1 at a concentration of 27 micrograms per liter (µg/L) during the fourth quarter 2015 event. This result is generally consistent with recently observed concentrations in this well.

PCE was detected in monitoring well MW-2 during the fourth quarter 2015 sampling event at a concentration of 55 µg/L which is consistent with recent concentrations and significantly below historical concentrations observed at this well during 2001 and 2002.

PCE was detected in monitoring well MW-10A at a concentration of 98 µg/L during the fourth quarter 2015 event. As shown on Figure 11, the concentration of PCE in this well has been observed to fluctuate historically over periods of several months, ranging from below detection limits to up to 900 µg/L since monitoring of the well began in 2005. This result is higher than the concentration observed during the previous monitoring event, however is generally consistent with concentrations observed prior to 2015.

PCE was detected in monitoring well MW-12 at a concentration of 4.6 µg/L during the fourth quarter 2015 event. This concentration is generally consistent with the first through third quarter 2015 sampling events and suggests a significant decrease in PCE concentrations since the fourth quarter 2012 sampling event when PCE was detected at a concentration of 130 µg/L.

Upgradient Wells

PCE was detected in monitoring well MW-3 during the fourth quarter 2015 event at a concentration of 9.7 µg/L which is consistent with recent and historical concentrations at this well.

PCE was detected in monitoring well MW-7 during the fourth quarter 2015 event at a concentration of 4.6 µg/L which is generally consistent with recent and historical concentrations at this well.

PCE was detected in monitoring well MW-8 during the third quarter 2015 at a concentration of 8.4 µg/L. This concentration is consistent with recent sampling results and continues to suggest a modest decrease in PCE concentrations since the third quarter 2007 sampling event when PCE was detected at a concentration of 99 µg/L.

PCE was detected in monitoring well MW-11 at a concentration of 8.7 µg/L during the fourth quarter 2015 event which is generally consistent with recent and historical concentrations at this well.

Cross-Gradient Wells

PCE was detected in monitoring well MW-5 during the fourth quarter 2015 event at a concentration of 12 µg/L which is generally consistent with recent and historical concentrations at this well.

PCE and TCE were not detected in monitoring well MW-4 during the fourth quarter 2015 monitoring event which is consistent with historical monitoring events.

Down-Gradient Wells

PCE was detected in the groundwater sample collected from monitoring well MW-6 during the fourth quarter 2015 event at a concentration of 37 µg/L. This concentration is generally consistent with recent sampling results and continues to suggest a significant decrease in PCE concentrations since sampling events in 2002, 2004, and 2005 when PCE was detected at concentrations ranging up to 760 µg/L (first quarter 2004).

PCE was detected in monitoring well MW-9 during the fourth quarter 2015 event at a concentration of 89 µg/L. This concentration is generally consistent with recent sampling events in 2014 and 2015. Previously, PCE had not been detected in MW-9 from the fourth quarter 2005 through second the quarter 2007, prior to going dry in 2007. Additional groundwater monitoring data will be used to evaluate the presence of PCE in MW-9.

Deep Zone Wells

Consistent with previous results, PCE and TCE were not detected in deep zone monitoring wells MW-10B and MW-10C during the fourth quarter 2015 monitoring event.

PCE breakdown products TCE and cis-1,2-dichloroethene were not detected above the laboratory reporting limit in any groundwater sample collected during the fourth quarter 2015 monitoring event.

Additional Activities Conducted During Fourth Quarter 2015

Between August 2014 and January 2015, Arcadis installed an air sparge (AS)/soil vapor extraction (SVE) treatment system on Site in accordance with the Work Plan dated July 26, 2011[1], The RWQCB approved the Work Plan in an August 2011 letter. Due to delays in obtaining access and encroachment permits, the AS/SVE pilot test did not begin until January 23, 2015. It concluded on October 26, 2015. A summary of pilot testing related activities will be submitted to the RWQCB under separate cover.

Planned Activities

The next groundwater monitoring event is scheduled to be conducted during the first quarter of 2016. The Parties are attempting to schedule a meeting with the RWQCB to discuss the results of the pilot test, and to discuss modifications of the monitoring program at the Site.

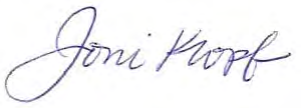

[1] Arcadis. 2011. Work Plan to Conduct a Pilot Test of Air Sparge/Soil Vapor Extraction, Meaders Cleaners Site, 711 South Palm Canyon Drive, Palm Springs, California. July 26.

Closing

Please feel free to contact the undersigned at (775) 229-8865 or by email at joni.kropf@arcadis.com if you have any questions or comments regarding this report.

Sincerely,

Arcadis U.S., Inc.

Notes:
nm - not measured
--- = not calculated
na - not available
dry - insufficinet water in well for sample collection
PCE - Tetrachloroethene
TCE - Trichloroethene
Cis-1,2 DCE cis-1,2-Dichloroethene
TOC -Top of casing
µg/L = micrograms per liter
mg/L = milligrams per liter

Report describing the extent of groundwater contamination in the vicinity of Monroe Street and Whitewater River Channel

January 5, 2015
672-01

Ms. Linda Shurlow
County of Riverside
Department of Environmental Health
47950 Arabia Street, Suite A
Indio, California 92201

RE: MONROE SHELL
43411 MONROE STREET
INDIO, CALIFORNIA

Dear Ms. Shurlow:

Enclosed is the fourth quarter 2014 groundwater report titled "Groundwater Monitoring Report" for the Monroe Shell facility located at 43411 Monroe Street, Indio, Califorina (CRDEH ID # 201032577, Global ID # T10000001757), dated December 31, 2014. The report presents the results of the fourth quarter 2014 groundwater monitoring well monitoring event conducted at 43411 Monroe Street in Indio, California (Site)(Figures 1, 2 and 3). In addition, this report presents a Site status update.

Please contact me if you have any questions or require additional information.

Sincerely,
FREY Environmental, Inc.

Andy Wittmann
Project Geologist

GROUNDWATER MONITORING REPORT

Quarter # __4__ Year _2014_

Site Name: Monroe Shell **Site Address: 43-411 Monroe Street** **Indio, California** **Assessor's Parcel # 610-070-041**	**Report Date: December 31, 2014** **RCDEH Site #: 201032577** **Global ID #: T10000001757**

Responsible Party (RP)/Landowner Information (list all parties):

Responsible Party Contact Name: Hani Maksimous
Company: Indio Enterprise, LLC
Address: 57595 South Valley Lane
City/Zip: La Quinta, California 92253-7772
Phone: (760) 861 - 7670
Relationship to Site: Responsible Party
Changes to RP and /or Landowner Information: Yes _____ No __X__

Groundwater Monitoring Information

Number GW Monitoring Wells On-site: 5
Number GW Monitoring Wells Off-site: 0
GW Monitoring Frequency:

Monthly 0 wells
Well ID's: N/A
Quarterly 0 wells
Well ID's: N/A
Semiannual 0 wells
Well ID's: N/A
Annual 5 wells
Well ID's: MW-1 through MW-5
Other 0 wells
Well ID's:

Constituents of Concern: TPH-g, TPH-d, BTEX, MTBE, and TBA
Laboratory Analyses: EPA Method No. 8015m for gasoline and EPA Method No. 8260B for BTEX and fuel oxygenates.

Number of GW zones: 1
GW wells on-site: 5
GW wells off-site: 0
Date GW Monitoring Conducted: December 2, 2014
Number GW Wells Gauged: 5
Number GW Wells Sampled: 0
Wells Not Sampled: MW-1 through MW-5
Reason Scheduled Wells Not Sampled:
Wells were dry
Well Purge Method: N/A

FREY measured the depth to groundwater during the current quarter, and because groundwater was not encountered in any of the wells on-Site (the wells were dry), groundwater monitoring wells MW-1 through MW-5 were not sampled during the current quarter. Per our previously submitted report entitled "*Additional Vapor Extraction Event…*", dated December 3, 2014, FREY proposes to terminate groundwater monitoring and sampling at the Site and prepare and submit a Case Closure Request to the RCDEH.

GROUNDWATER MONITORING REPORT

Current Monitoring Period (Fourth Quarter 2014)	Historic Monitoring Data
Min Depth to GW: N/A **Max Depth to GW:** N/A **Average GW Elevation:** N/A **Average Change in GW Elevation:** N/A **Submerged Well Screens:** Yes ____ No __X__ **Well ID's:** **Flow Direction:** N/A **GW Gradient:** N/A **GW Wells with LPH:** None **LPH Thickness:** N/A **Volume of LPH Recovered:** N/A	**Min Depth to GW:** 59.75 ft **Max Depth to GW:** 79.28 ft **Max GW elevation:** -50.46 ft **Min GW elevation:** -71.47 ft **Previous Reporting Period GW Flow Direction:** SE **Historical GW Flow Directions:** SE **Cumulative Volume of LPH Recovered to Date:** N/A **If Well Screens are Submerged, Number of Consecutive Sampling Events With Submerged Well Screens:** N/A

Discussion of Current Conditions, Changes, and Trends in Hydrogeologic Conditions:
Groundwater was not encountered in groundwater monitoring wells MW-1 through MW-5 during the current quarter. The wells were dry. Historical depth to groundwater and groundwater elevation data are summarized in Table 3.

Maximum Current GW Concentrations	Maximum Historic GW Concentrations
Date, Concentration, Well ID	**Date, Concentration, Well ID**
TPHg: N/A	**TPHg:** 4/19/2006, 79 ug/L, MW-3
TPHd: N/A	**TPHd:** Not detected
Benzene: N/A	**Benzene:** 2/4/2004, 1.1 ug/L, MW-4
Toluene: N/A	**Toluene:** 2/4/2004, 4.4 ug/L, MW-4
Xylenes N/A	**Xylenes:** 2/4/2004, 4.4 ug/L, MW-4
MTBE: N/A	**Ethyl-benzene:** Not detected
TBA: N/A	**MTBE:** 4/19/2006, 2.0 ug/L, MW-3
	TBA: Not detected

Discussion of Current Conditions, Changes and Trends in Analytical Results:
Historical laboratory chemical analyses results are summarized on Table 3.

Stored Over 90 days? Yes ____ No __X__
Date to be Removed? _____

Waste Disposed of During Reporting Period? Yes ____ No __X___
If Yes: **Date Removed _____ Quantity _____**

GROUNDWATER MONITORING REPORT

Site Information & Corrective Actions

Current & Previous Site Use:
The Site is located at 43-411 Monroe Street approximately 1,200 feet south of the intersection of Monroe Street and Interstate 10 in Indio, California. There has been a service station operating at the Site since at least 1988. Shell operated the service station at the Site from 1988 through January 2006. The Site was sold to Indio Enterprises, LLC (IE) in January of 2006. IE is currently the proprietor of the Shell-branded service station operating at the Site.

The Site fueling system consists of three 10,000-gallon double-walled fiberglass underground storage tanks (USTs), six product dispensers, and a canopy. Site structures include a carwash building and a service station building configured as shown on Figure 3. A Union 76 service station is operating immediately north of the Site. The property located east of the Site across Monroe Street is currently undeveloped. Approximately 300 feet east of the Site, beyond the undeveloped land, is a residential neighborhood. The property immediately south and west of the Site is occupied by a StorAmerica Indio self storage facility. A Site vicinity sketch is included as Figure 2.

The estimated elevation at the Site is approximately 8 feet above mean sea level (msl). Topography in the vicinity of the Site slopes gently toward the southwest (USGS, 1972).

Site & Vicinity Land Use:
The Site and Site vicinity land use is predominantly commercial to the north, south, and west. The Site vicinity land use to the east is residential.

Current and Potential GW Use:
Groundwater within the Coachella hydrologic subunit has been identified to be beneficial for municipal, industrial, and agricultural use by the DWR (DWR, 2005).

Number of Water Wells within ½ Mile of Site: Unknown

Distances From Site: Unknown

GW Basin/Shallow Aquifer Names:
The Site is located within the Colorado River hydrologic region, Coachella Valley groundwater basin, Indio subbasin (Groundwater Basin No. 7-21.01)(DWR, 2003). The Indio subbasin is bound by the Garnet Hill fault to the northeast, the San Jacinto and Santa Rosa Mountains to the west and south, and the Thermal subarea of the Indio subbasin to the east. Groundwater in this subbasin generally flows in a southeasterly direction toward the Salton Sea from the main recharge areas along the base of the San Jacinto Mountains and near the San Gorgonio Pass (DWR, 1964).

The Site is located within the Coachella Valley Planning Area, Whitewater hydrologic unit, Coachella hydrologic area, Indio hydrologic subarea (Area Code 719.47)(DWR, 2005). The planning area is bound by the San Bernardino Mountains and the Little San Bernardino Mountains to the north and east, the San Jacinto and Santa Rosa Mountains to the west, and the Salton Sea shoreline to the south. Groundwater within the planning area is principally stored in the unconsolidated Pleistocene sediments and is generally unconfined. Wells within the planning area have yielded 4,000 gallon per minute (gpm). Groundwater within the Coachella hydrologic subunit has been identified to be beneficial for municipal, industrial, and agricultural use by the DWR (DWR, 2005).

GROUNDWATER MONITORING REPORT

Name of Nearest Surface Water within ½ mile radius of site: Whitewater River
Distance From Site: The Site is located approximately 0.05 mile south of the Whitewater River. The Whitewater River, in which water is occasionally present, flows toward the southeast and drains into the Salton Sea, approximately 18 miles southeast of the Site (CDMG, 1965).

Other Sensitive Receptors (i.e. schools, hospitals, utilities, etc.) within 1/2 mile: Unknown

Site Lithology:
Subsurface materials encountered during drilling consisted predominantly of fine grained, poorly graded sands, interbedded silts, silty sands, and clays from the ground surface to approximately 60 feet bgs. Alternating beds of sands and silts appear to exist in somewhat continuous and/or gradational layers beneath the Site.

Vertical and Horizontal Soil Plume Assessment Complete? Yes __X__ No ____

Corrective Action Plan or Remedial Action Plan in Place: Vapor extraction rebound testing was proposed to be conducted at the Site in our RAP and RAP Addendum which were approved by the RCDEH in letters dated September 27, 2010 and December 1, 2010, and in email correspondence with Ms. Linda Shurlow of the RCDEH on July 10 and 22, 2013.

GROUNDWATER MONITORING REPORT

Current Phase of Project:
Low-Threat Underground Storage Tank Case Closure Policy (LTCP) evaluation
Conduct of a Sensitive Receptor Survey (SRS)
Preparation of a Case Closure Request

Most Recent Agency Directive & Status of Implementation:
Approval of the RAP and RAP addendum for the Site in letters dated September 27, 2010 and December 1, 2010, respectively. On January 17, 2013, the Underground Storage Tank Cleanup Fund (USTCF) issued a letter entitled "Underground Storage Tank Cleanup Fund (FUND), Notice of Eligibility Determination: Claim No. 019664; for Site Address: 43411 Monroe Street, Indio". Following receipt of this letter, FREY contacted Ms. Linda Shurlow of the RCDEH to discuss planned corrective action activities at the Site. FREY and Ms. Shurlow discussed the activities outlined in our RAP and RAP addendum and it was determined that the Site should be treated as a new case. As such, the approved RAP and RAP addendum were deemed incomplete. FREY subsequently prepared and submitted a workplan for soil assessment at the Site in areas adjacent to the current USTs and fuel appurtenances, and near confirmation soil boring CB-5, which contained the highest concentrations of petroleum hydrocarbons in soil detected following the current release in 2008. The workplan was approved by the RCDEH in a letter dated May 14, 2013. FREY conducted an assessment of the current extent of petroleum hydrocarbons in subsurface soils as beneath the Site pursuant to a telephone conversation with Ms. Linda Shurlow on January 23, 2013, and in accordance with our workplan dated March 12, 2013, on June 10 through 12, 2013. A report documenting and presenting the results of the investigation dated August 19, 2013 was prepared and submitted to the RCDEH. Because petroleum hydrocarbons were not detected in any of the soil samples collected and analyzed during the investigation, FREY concluded that the lateral and vertical extent of petroleum hydrocarbons in soil beneath the Site had been fully assessed.

As previously indicated in our RAP and RAP Addendum which were approved by the RCDEH in letters dated September 27, 2010 and December 1, 2010, respectively, and in accordance with email correspondence between FREY personnel and Ms. Linda Shurlow of the RCDEH on July 10, 2013 and July 22, 2013, FREY conducted a continuous 30-day SVE event at the Site between February 25 and March 27, 2014. FREY terminated SVE after 30 days, and prepared and submitted a report documenting and presenting the results of the event to the RCDEH dated May 6, 2014.

Due to inconsistencies between the analytical data for soil vapor samples collected during the 30-day vapor extraction event compared to the influent concentrations detected in vapor samples collected by Wayne Perry, prior to system shutdown in December of 2008, FREY concluded that there may have been a leak in the subsurface remedial piping and/or vapor extraction manifold located within the remedial enclosure. Therefore, FREY proposed conduct of a pressure test on the subsurface piping in an effort to locate any leaks within the subsurface remedial piping and/or vapor extraction manifold. Additionally, as concentrations of petroleum hydrocarbons were generally very low or not detected in soil vapor samples collected and analyzed from individual vapor extraction wellheads during the 30-day vapor extraction event, FREY proposed conduct of an additional 30-day vapor extraction event in order to assess if additional vapor extraction was warranted. FREY conducted an additional vapor extraction event at the Site on October 3, 2014, focusing on vapor extraction from well VE-2S/VE-2D, which had historically contained the highest detected concentrations of petroleum hydrocarbon constituents in soil vapor at the Site. The additional vapor extraction event was conducted for approximately four hours on October 3, 2014.

During the additional vapor extraction event conducted on October 3, 2014, the VES extracted vapors at flow rates ranging from 12 scfm to 131 scfm, with corresponding vacuums of 18 to 44 inches of water. The maximum ROI for the vapor extraction wells tested during vapor extraction from the wellhead of VE-2S was estimated to be approximately 55 feet. The maximum ROI for the vapor extraction wells tested during vapor extraction from the wellhead of VE-2D was estimated to be approximately 95 feet. Total influent UVOC concentrations to the VES as measured with field instrumentation ranged from approximately 1 to 15 ppmv. During the startup of the vapor extraction system on October 3, 2014, FREY did not observe any field detected concentrations of petroleum hydrocarbons in soils and/or soil vapors beneath the Site. Additionally, only very low concentrations of toluene, ethylbenzene, and total xylenes were detected in the soil vapor samples collected and analyzed from extraction well VE-2S at maximum concentrations of 0.22 ppmv, 0.057 ppmv, and 0.38 ppmv, respectively. No other VOCs were detected in any of the soil vapor samples collected and analyzed from the wellheads of VE-2S/VE-2D. Therefore, it was concluded that the secondary source removal previously conducted at the Site by Wayne Perry from June 15, 2006 through December 11, 2008, was effective and had been conducted to the extent practicable (FREY, 2014a).

Activities Conducted During Current Reporting Period (Fourth Quarter 2014):

- FREY conducted fourth quarter 2013 groundwater monitoring activities on October 3, 2014. The wells were dry.
- FREY conducted a pressure test on the subsurface piping connecting vapor extraction wells VE-2S, VE-2D, VE-7, and VE-8 to the VES, in an effort to locate any leaks within the subsurface remedial piping and/or vapor extraction manifold on October 3, 2014. No leaks within the subsurface remedial piping and/or vapor extraction manifold were discovered.
- FREY conducted an additional vapor extraction event at the Site on October 4, 2014. A report documenting and presenting the results of the additional vapor extraction event will be presented to the RCDEH.

Activities Planned for Next Reporting Period:

- FREY will prepare and submit a Case Closure request to the RCDEH.

Impediments to Assessment, Cleanup and/or Closure Progress:

None.

Conclusions:

Petroleum hydrocarbon concentrations in soil associated with the recent release discovered in December 2008, have been adequately defined laterally and vertically at the Site. It is unknown whether petroleum hydrocarbon concentrations have impacted groundwater at the Site subsequent to the current release that occurred in 2008. However, based on 1) the estimated size of the current release; 2) previously conducted vapor extraction remediation by Wayne Perry, Inc. at the Site between June 15, 2006 and December 11, 2008; 3) historical groundwater monitoring and sampling results for the Site as presented in Table 3; and, 4) because the concentrations of petroleum hydrocarbon constituents detected in soil during the assessment of the current extent of petroleum hydrocarbons (all non-detect), it is unlikely that groundwater beneath the Site has been impacted significantly by the previous or current release of petroleum hydrocarbons at the Site.

Recommendations:

Prepare and submit a Case Closure Request

GROUNDWATER MONITORING REPORT

Notes:
GW = Groundwater
Elevations are in feet above sea level
LPH = Liquid phase hydrocarbons
N/A = Not Applicable

ug/L = Micrograms per liter
bgs = Below ground surface
ND = Not detected

Pursuant to California Business and Professions Codes 6735, 7835, and 7835.1 groundwater monitoring and reporting was performed under the direction of the undersigned California Registered Professional Geologist.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL RECORDS

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 2 RCRA-LQG sites within the searched area.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2014 has revealed that there are 24 RCRA-SQG sites within the searched area.

EXECUTIVE SUMMARY

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/09/2014 has revealed that there is 1 RCRA-CESQG site within the searched area.

Site	Address	Map ID

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2014 has revealed that there are 5 RCRA NonGen / NLR sites within the searched area.

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, and dated 04/09/2009 has revealed that there is 1 FTTS site within the searched area.

Site	Address	Map ID
PALM SPRINGS AERIAL	***TRAMWAY ROAD***	***5-2***

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there is 1 HIST FTTS site within the searched area.

Site	Address	Map ID
PALM SPRINGS AERIAL	***TRAMWAY ROAD***	***5-2***

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 01/18/2015 has revealed that there are 44 FINDS sites within the searched area.

RMP: When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

A review of the RMP list, as provided by EDR, and dated 02/01/2015 has revealed that there are 4 RMP sites within the searched area.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 10/16/2014 has revealed that there is 1 US AIRS site within the searched area.

STATE AND LOCAL RECORDS

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 02/16/2015 has revealed that there is 1 SWF/LF site within the searched area.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2013 has revealed that there are 247 HAZNET sites within the searched area.

EDR PROPRIETARY RECORDS

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 68 EDR US Hist Auto Stat sites within the searched area.

RGA LF: The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Resources Recycling and Recovery in California.

A review of the RGA LF list, as provided by EDR, has revealed that there is 1 RGA LF site within the searched area.

WDS:

Facility ID:	West Colorado River 331171011
Facility Type:	Municipal/Domestic - Facility that treats sewage or a mixture of predominantly sewage and other waste from districts, municipalities, communities, hospitals, schools, and publicly or privately owned systems (excluding individual subsurface leaching systems disposing of less than 1,000 gallons per day).
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	Not reported
Subregion:	7
Facility Telephone:	7603251449
Facility Contact:	ART POPP
Agency Name:	MT SAN JACINTO WNT PRK AUTHRTY
Agency Address:	ONE TRAMWAY RD
Agency City,St,Zip:	PALM SPRINGS 92262
Agency Contact:	ART POPP
Agency Telephone:	7603251449
Agency Type:	Government Agency Combination (City-County, County-State, etc.)
SIC Code:	7999
SIC Code 2:	4952
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	DOMEST
Waste Type2:	Not reported
Waste2:	Domestic Sewage
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WDS:

Facility ID:	West Colorado River 338888002
Facility Type:	Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	Not reported
Subregion:	7
Facility Telephone:	7603204798
Facility Contact:	ALEX SANCHEZ
Agency Name:	AMERICAN GOLF CORPORATION
Agency Address:	1633 26TH ST
Agency City,St,Zip:	SANTA MONICA 90404
Agency Contact:	MIKE JENSEN
Agency Telephone:	Not reported
Agency Type:	Private
SIC Code:	7992
SIC Code 2:	4971
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	MISCEL
Waste Type2:	Not reported
Waste2:	Miscellaneous (Includes wastes from dewatering, recreational lake overflow, swimming pool wastes, water ride wastewater, ground water seepage and other wastes of this type)
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	User: Reclamation requirements that have been issued to an entity that only uses reclaimed water.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Agency Contact:	DAVID BARAKIAN
Agency Telephone:	7603238299
Agency Type:	City
SIC Code:	7992
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	MISCEL
Waste Type2:	Not reported
Waste2:	Miscellaneous (Includes wastes from dewatering, recreational lake overflow, swimming pool wastes, water ride wastewater, ground water seepage and other wastes of this type)
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	User: Reclamation requirements that have been issued to an entity that only uses reclaimed water.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Registry ID: 110002890140

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Agency Contact:	MARLIES NOVELLI
Agency Telephone:	9494740404
Agency Type:	Private
SIC Code:	7033
SIC Code 2:	4952
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	DOMEST
Waste Type2:	Not reported
Waste2:	Domestic Sewage
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

41 **FIESTA CATHEDRAL PALM 97-50083** **WDS S102005604**
35901 CATHEDRAL CANYON DR **ENF N/A**
CATHEDRAL CITY, CA 92234

WDS:
Facility ID: West Colorado River 331173011
Facility Type: Municipal/Domestic - Facility that treats sewage or a mixture of predominantly sewage and other waste from districts, municipalities, communities, hospitals, schools, and publicly or privately owned systems (excluding individual subsurface leaching systems disposing of less than 1,000 gallons per day).
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: Not reported
Subregion: 7
Facility Telephone: 7603248244
Facility Contact: ED LITTLE MGR
Agency Name: FIESTA RESORTS INC
Agency Address: 17672-B COWAN ST
Agency City,St,Zip: IRVINE 926146027
Agency Contact: MARLIES NOVELLI
Agency Telephone: 9494740404
Agency Type: Private
SIC Code: 7033
SIC Code 2: 4952
Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste: DOMEST
Waste Type2: Not reported
Waste2: Domestic Sewage
Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD,

Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110005995245

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

104 **COOLING TOWER BLOWDOWN 03-125** **WDS** **S102005550**
43500 MONTEREY AVE **N/A**
PALM DESERT, CA 92260

WDS:

Facility ID:	West Colorado River 330131001
Facility Type:	Municipal/Domestic - Facility that treats sewage or a mixture of predominantly sewage and other waste from districts, municipalities, communities, hospitals, schools, and publicly or privately owned systems (excluding individual subsurface leaching systems disposing of less than 1,000 gallons per day).
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	Not reported
Subregion:	7
Facility Telephone:	7607732551
Facility Contact:	STEVE RENEW
Agency Name:	COLLEGE OF THE DESERT
Agency Address:	43-500 MONTEREY AVE
Agency City,St,Zip:	PALM DESERT 92260
Agency Contact:	RICHARD TREECE
Agency Telephone:	7603663791
Agency Type:	Private
SIC Code:	8221
SIC Code 2:	4952
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	CONTAC
Waste Type2:	Not reported
Waste2:	Cooling Water: Contact
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G.,

Map ID	Site	Database(s)	EPA ID Number

COOLING TOWER BLOWDOWN 03-125 (Continued) **S102005550**

inorganic salts and heavy metals) are included in this category.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Treat To Water:	Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
Complexity:	Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

100 kg of that material at any time

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Violation Status: No violations found

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History: ***Data prior to 2005 does not appear in GeoTracker. Consult agency file for all site data*** In February, 2003 a grasp survey was completed at the site. One boring was drilled to 75. No soil samples were analyzed. One groundwater sample was taken at 60. MTBE was detected at 14 ppb in the groundwater. In April 2003, a phase II survey was completed. 8 borings were drilled to 20 and 40. A maximum of 25 ppm MTBE and 13 ppm TBA was detected in the soil. The site was placed into LOP. 5 monitoring wells were installed in September and October, 2003. No TPHg was detected in the soils. MW-3 had one hit of TPHd at 1300 ppm at 60. MW-4 had a hit of TPHd of 320 ppm at 55. No BTEX and oxygenates were detected in the soil except for one hit of 5.7 ppb MTBE at 35 in MW-3. 3 SVE wells were installed in March 2003. Up to 8.1 ppm TPHg, 340 ppm TPHd, 44 ppm MTBE and 28 ppm TBA was detected. A SVE test was conducted. VE-1 deep started at 1860 ppmv TPHg and ended at 582. MTBE started at 36 ppmv and ended at 120 ppmv. VE-2 deep started at 509 ppmv TPHg and ended at 479. MTBE started at 28 ppmv and ended at 45 ppmv. VE-3 deep started at 1920 ppmv TPHg and ended at 1140 ppmv TPHg. MTBE started at 1800 ppmv and ended at 880 ppmv. 9 borings were drilled in May, 2005. 4 were converted to SVE wells. 5 borings were drilled to 20, one to 40 and 3 to 60. TPHg ranged from ND to 78 ppm. Benzene was ND. MTBE ranged from ND to 20 ppm. TBA ranged from ND to 33 ppm. TAME ranged from ND to 0.030 ppm. The SVE system began June 15, 2006 and ran until November 1, 2007 when it was shut down for a rebound test. The rebound test was successful and 4 confirmation borings were drilled March 20 and April 16, 2008 to 65 and sampled every 5. CB-5 had TPHg detected at 4.9 ppm at 20. MTBE and TBA were detected at 6.6 ppm and 4.8 ppm in the same sample. All other concentrations in all the samples were below 100 ppb. Closure was requested and denied due to the 6.6 ppm MTBE and 4.8 ppm TBA in the soil at 20 in CB-5. Additional SVE wells and SVE remediation was requested. 2 SVE wells were installed July 9, 2008. The wells were screened from 17-22 and 18-23. The 20soil sample had 2,300 ppm TPHg, 2.8 ppm MTBE and 0.29 ppm TBA. The SVE system was operated from July 30, 2008 to December 11, 2008. TPHg went from 20 to <3 ppmv from July 30 to October 2, 2008 and then started increasing to 770 ppmv on Dec. 4, 2008. The December 4th vapor samples were analyzed for ethanol and up to 12 ppbv was detected. The original release occurred before ethanol was added to gasoline. 11 lbs of hydrocarbons were removed from July 20 to October 2, 2008 and 331 lbs from October 31 to December 11, 2008. The station owner/operator revealed that there had been a gasoline release as the result of overfilling the tank during a fuel drop on a previous date and the increase seen after October 31, 2008 is potentially attributed to this release. 2 confirmation boring were drilled Dec. 5, 2008 to 25 and sampled every 5. No TPHg, TPHd, BTEX or ethanol was detected. MTBE was detected in both borings at 20 at 12 and 6.3 ppm. A silt layer exists at 20. Laboratory analysis indicated that the silt layer is greater than 80% water saturated. Based on the soil conditions and the solubility and low Henrys constant of MTBE, the consultant believes additional SVE would not be effective in removing

Map ID	Site	Database(s)	EPA ID Number

SHELL OIL COMPANY (Continued) **S105126325**

the remaining MTBE from this soil unit. The groundwater was sampled quarterly from November 2003 until October, 2008. A maximum 79 ppb TPHg, 1.1 ppb Benzene, 4.4 ppb toluene, 4.4 ppb xylenes, and 2 ppb MTBE have been detected. Nothing has been detected during the last 10 quarters. According to the consultant, MTBE in the soil has not and does not pose a potential threat to groundwater. They requested closure of the original environmental case for this site, stating that the recent contamination detected was from a new release which occurred after Shell nolonger owned the site. Closure was denied. RCDEH requested a 5 day SVE test using the SVE wells surrounding the tank pit and testing for ethanol. After numerous discussions and meetings with Shell, RCDEH and CRRWQCB, it was agreed that the sudden increase in the extracted hydrocarbon mass in December 2008 was attributed to a second release at the site after the site no longer was owned by Shell Oil Company and closure of the Shell portion of the clean up could be issued. Case closed 12/29/09. A new case will be opened for the recent release.

SHELL OIL COMPANY (Continued) **S105126325**

by Shell Oil Company (Shell) during the clean up for a previous UST release at the site (200319574). A second release was discovered during the test when ethanol was detected in the vapors. Ethanol was not present in the gasoline when the first release occurred. The release had occurred after 2006 when Shell sold the property. A SB989 test conducted in January 2009 failed. Repairs were made and the tanks were retested June 18, 2009 and passed. Helium and piping testing done during the installation of the EVR Healy tank passed. Shell was issued a no further action letter December 29, 2009 for the first UST release. The second release is being entered into the program with the current property owner and the tank operator as the Responsible Parties. 9 borings (FB-1 through FB-3 and FB-5 through FB-10) were drilled June 10 through June 12, 2013. FB-4 was not drilled as pea gravel was encountered at less than 5 feet bgs. FB-1 through FB-3, FB-5 and FB-7 through FB-10 were drilled to 41 feet bgs, FB-6 was drilled to 51.5 feet bgs. Groundwater was not encountered. Soil samples were taken every 5 feet. TPHg, TPHd, and VOCs were not detected in any of the soil samples collected. A 30 day SVE test was begun February 25, 2014 and ran it until March 27, 2014. Influent vapor samples were taken February 25, February 28, March 18 and March 27, 2014. Vapor samples from the individual wells were taken on March 18 and March 27, 2014. Approximately 6 lbs (1 gallon) of hydrocarbons were removed from the soil. No TPHg or MBTE was detected in the influent samples. BTEX was detected with a high of 0.023 ppmV B, 0.063 ppmV T, 0.012 ppmV E and 0.074 ppmV X. VE2S had a hig of 7.1 ppmV TPHg and VE-7 had a high of 10 ppmV TPHg. B was detected at 0.066 ppmV in VE2S and 0.067 ppmV in VE-7. T was detected in all 12 wells with a high of 0.130 ppmV in VE2S. E was detected in all 12 wells with a high of 0.9997 ppmV in VE2S. X were detected in all 12 wells with a high of 0.037 ppmV detected in VE2S. MTBE and TBA were not detected. All the wellheads of all the gw monitoring and SVE wells were inspected October 3, 2014. No groundwater was encountered in any of the wells. Pressure testing of all the subsurface lines was conducted October 3, 2014. No leaks were discovered. A 30-day SVE test was conducted starting October 3 after the line pressure testing, focusing on wells VE-2S and VE-2D. No petroleum concentrations were detected in the vapors and the test was terminated 8 hours after startup.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

	Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	DOMEST
Waste Type2:	Not reported
Waste2:	Domestic Sewage
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	4
Baseline Flow:	1
Reclamation:	Producer-User: Reclamation requirements that have been issued to a producer of reclaimed water who also uses the product.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

	Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	DOMEST
Waste Type2:	Not reported
Waste2:	Domestic Sewage
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	9
Baseline Flow:	5
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
Complexity:	Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Historical Generators:
Date form received by agency: 03/17/2003
Site name: LA QUINTA DRY CLEANERS
Classification: Large Quantity Generator

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Date form received by agency: 09/01/1996
Site name: LA QUINTA CLEANERS
Classification: Small Quantity Generator

Date form received by agency: 12/22/1986
Site name: LA QUINTA CLEANERS
Classification: Large Quantity Generator

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 03/28/1993
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State Contractor/Grantee

FINDS:

Registry ID: 110005994843

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

87075 AVE 54 **N/A**
COACHELLA, CA 92236

WDS:

Facility ID:	West Colorado River 330104021
Facility Type:	Municipal/Domestic - Facility that treats sewage or a mixture of predominantly sewage and other waste from districts, municipalities, communities, hospitals, schools, and publicly or privately owned systems (excluding individual subsurface leaching systems disposing of less than 1,000 gallons per day).
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	Not reported
Subregion:	7
Facility Telephone:	7603915008
Facility Contact:	JOE DE LA RIVA

Map ID	Site	Database(s)	EPA ID Number

COACHELLA SANITARY DIST 00-138 (Continued) **S103341777**

Agency Name:	COACHELLA SANITARY DISTRICT
Agency Address:	1515 SIXTH ST
Agency City,St,Zip:	COACHELLA 92236
Agency Contact:	BYRON WOOSLEY
Agency Telephone:	7603983502
Agency Type:	Special District (Includes districts established under general acts, sanitary districts, water districts irrigation districts, etc.)
SIC Code:	4952
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	DOMEST
Waste Type2:	Not reported
Waste2:	Domestic Sewage
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	1
Baseline Flow:	0
Reclamation:	Producer-User: Reclamation requirements that have been issued to a producer of reclaimed water who also uses the product.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Agency Name:	COACHELLA SANITARY DISTRICT
Agency Address:	1515 SIXTH ST
Agency City,St,Zip:	COACHELLA 92236
Agency Contact:	BYRON WOOSLEY
Agency Telephone:	7603983502
Agency Type:	Special District (Includes districts established under general acts, sanitary districts, water districts irrigation districts, etc.)
SIC Code:	4952
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	DOMEST
Waste Type2:	Not reported
Waste2:	Domestic Sewage
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	2
Baseline Flow:	2
Reclamation:	Producer-User: Reclamation requirements that have been issued to a producer of reclaimed water who also uses the product.
POTW:	The POTW Does not have an approved pretreatment program. Some POTWs may have local pretreatment programs that have not been approved by the regional board and/or EPA.
Treat To Water:	Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
Complexity:	Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

87500 AVE 56 **N/A**
THERMAL, CA 92274

WDS:

Facility ID:	West Colorado River 332013011
Facility Type:	Agricultural - Facility that treats and/or disposes of the wastes associated with confined and concentrated animal feeding, confined animal feeding, confined animal holding, confined and concentrated aquatic animal production facilities, and aquaculture. the treatment and/or disposal of agricultural return water is included in this category.
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	Not reported
Subregion:	7
Facility Telephone:	7603995026
Facility Contact:	DOUGLAS WILLIAMS
Agency Name:	CALIFORNIA REDI-DATE LLC
Agency Address:	PO BOX 728
Agency City,St,Zip:	THERMAL 92274
Agency Contact:	DOUGLAS WILLIAMS
Agency Telephone:	7603995026
Agency Type:	Private
SIC Code:	2034
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	PROCES
Waste Type2:	D
Waste2:	Process Waste (Waste produced as part of the industrial/manufacturing process)
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Washwater Waste (Product washwater wastes: E.G., photo reuse wastewater, vegetable washwater)
Secondary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Map ID	Site	Database(s)	EPA ID Number

CA REDI-DATE LLC 01-012 (Continued) **S103341774**

Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

There are no epa codes to report for this search area.

Section 5

Databases Searched and Update Dates

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/16/2014
Date Data Arrived at EDR: 01/08/2015
Date Made Active in Reports: 02/09/2015
Number of Days to Update: 32

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

US HIST CDL: National Clandestine Laboratory Register
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Next Scheduled EDR Contact: 06/29/2015
Data Release Frequency: Annually

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

APPENDIX G

INITIAL SITE ASSESSMENT CHECKLIST

Initial Site Assessment (ISA) Checklist

Project Information

District 8 County Riv Route 111 Post Mile Various EA ATPL 6164 (022)

Description This ISA checklist was prepared for the Coachella Valley Link (CV Link) project that traverses about 74.47 miles thoughout the Coachella Valley, between Palm Springs and Coachella, CA. The CV Link is a multi-modal transportation facility that will initially connect 8 of 9 cities, unincorporated lands, and Indian reservations. Bicycles, pedestrians, and low speed vehicles will use the corridor.

Is the project on the HW Study Minimal-Risk Projects List (HW1)? Unknown

Project Manager LeGrand Velez phone # 760-356-1127

Project Engineer Ulrich Sauerbrey phone # 760-356-1127

Project Screening

Attach the project location map to this checklist to show location of all known and/or potential HW sites identified.

1. Project Features: New R/W? Yes Excavation? Yes Railroad Involvement? No

   Structure demolition/modification? No Subsurface utility relocation? Unknown (not likely)

2. Project Setting River/creek channels, recreation, commercial retail, roadways, schools, & vacant land.

   Rural or Urban Urban and rural setting.

   Current land uses Existing trails along Whitewater River Channel & Tahquitz Creek, and along roadways.

   Adjacent land uses Vacant land, residential, schools, and commercial.
   (industrial, light industry, commercial, agricultural, residential, etc.)

3. Check federal, State, and local environmental and health regulatory agency records as necessary, to see if any known hazardous waste site is in or near the project area. If a known site is identified, show its location on the attached map and attach additional sheets, as needed, to provide pertinent information for the proposed project.
   07-10-15 / 07-24-15 / 08-08-15 / 03-19-16 / 07-29-16

4. Conduct Field Inspection. Date _____ Use the attached map to locate potential or known HW sites.

   STORAGE STRUCTURES / PIPELINES: (within or immediately adjacent to CV Link route)

   Underground tanks None observed Surface tanks None observed

   Sumps None observed Ponds None observed

   Drums None observed Basins None observed

   Transformers Two (see below) Landfill None observed

   Other Pad-mounted electric transformers were observed immediately adjacent to the CV Link route in two areas (east side of Cathedral Canyon Drive and 540 feet northwest of Frank Sinatra Drive). Indications of transformer oil releases from these transformers were not encountered during the site reconnaissance.

Initial Site Assessment (ISA) Checklist

(continued)

CONTAMINATION: (spills, leaks, illegal dumping, etc.)

Surface staining None observed Oil sheen None observed

Odors None detected Vegetation damage None observed

Other Solvent-impacted groundwater underlies the CV Link route at the intersection of Tahquitz Creek and South Palm Canyon Drive (see other comments below)

HAZARDOUS MATERIALS: (asbestos, lead, etc.)

Buildings Not applicable Spray-on fireproofing Not applicable

Pipe wrap Not applicable Friable tile Not applicable

Acoustical plaster Not applicable Serpentine Not applicable

Paint Not applicable Other Not applicable

5. Additional record search, as necessary, of subsequent land uses that could have resulted in a hazardous waste site. Use the attached map to show the location of potential hazardous waste sites.

6. Other comments and/or observations: Elevated solvent (tetrachloroethene) concentrations have been reported in groundwater beneath the site at the intersection of Tahquitz Creek & S. Palm Canyon Drive in Palm Springs. This contamination underlies the planned CV Link route at depths of 225 to 235 feet. Due to its depth, this solvent is not considered a potential threat to workers during construction activities. The planned excavations in this area (for signage, etc.) are not anticipated to exceed 4' in depth. No other potentially hazardous substances were encountered within the planned construction area.

ISA Determination

Does the project have potential hazardous waste involvement? No If there is known or potential hazardous waste involvement, is additional ISA work needed before task orders can be prepared for the Investigation? No If "YES," explain; then give an estimate of additional time required: _____

A brief memo should be prepared to transmit the ISA conclusions to the Project Manager and Project Engineer.

ISA Conducted by  **Date** 07-29-16

Quin Kinnebrew

Estimated Extent of Solvent-Impacted Groundwater

76 Fuel Station
Gasoline was released into soil beneath a fuel tank. Cleanup Complete.

Former "Mr. Meat".
Gasoline was released into soil beneath a fuel tank. Cleanup completed in 1992.

PREVIOUSLY PROPOSED ALIGNMENT REMOVED

KFC restaurant. Former dry cleaning site (Meader's Cleaners at 711 S. Palm Canyon Drive). Significant soil and groundwater impacts. Cleanup underway. The extent of impacted groundwater shown. Impacted groundwater is at about 220 to 235 feet below ground surface.
